Government Pharmaceutical Benefits expenditure on accrual accounting basis for the year ending 30 June 2008 totalled $7,033.8 million, compared with $6,428.3 million for the previous year. This is a 9.4 per cent increase. The remainder of this summary refers to Pharmaceutical Benefits Scheme (PBS) Section 85 data reported on cash accounting basis.

Total PBS prescription volumes increased by 1.6 per cent to a total of 171.3 million, compared to 168.5 million for the previous year. The growth in government expenditure compared with only a slight rise in prescription volume reflects the continuing trend of doctors prescribing newer and more expensive drugs.

Government expenditure amounted to 83.3 per cent of the total cost of PBS prescriptions. The remainder was patient contributions that amounted to $1,189.5 million, up from $1,151.3 million in the previous twelve-month period.

The majority of government expenditure on PBS prescriptions was directed towards concessional cardholders ($4,699.2 million, 79.3% of the total). This is compared to concessional expenditure of $4,401.4 million in the previous period (80.4% of the total).

The average dispensed price per prescription of PBS medicines increased to $41.54 for the year ending June 2008 ($39.35 for the year ending June 2007). The average government cost of these scripts was $34.58 for the same period ($32.50 to June 2007).

The three drugs with the highest cost to government were Atorvastatin Calcium ($544.1 million), Simvastatin ($221.9 million) and Clopidogrel Hydrogen Sulfate ($171.2 million). PBS drugs most frequently prescribed are Atorvastatin Calcium, followed by Simvastatin and Esomeprazole Magnesium Trihydrate. See Table 10(b) for details.
