*The assessment of the patient's response to the initial course of treatment must be made following a minimum of 12 weeks of treatment and submitted to Medicare Australia no later than 4 weeks from the cessation of that treatment course. If the response assessment is not submitted within these timeframes, the patient will be deemed to have failed this course of treatment.*

*A maximum of 16 weeks of treatment with etanercept will be approved under this criterion.*

*Where fewer than 3 repeats are initially requested with the authority prescription, authority approvals for sufficient repeats to complete a maximum of 16 weeks of treatment may be requested by telephone.*

### Authority Required

*Initial 2 (change or re-commencement for all patients)*

*Initial course of PBS-subsidised treatment with etanercept, by a rheumatologist, of an adult with a documented history of active ankylosing spondylitis who, in this treatment cycle, has received prior PBS-subsidised treatment with either adalimumab, etanercept or infliximab for this condition and has not failed PBS-subsidised therapy with etanercept.*

*To demonstrate a response to treatment the application must be accompanied by the results of the most recent course of TNF-alfa antagonist therapy within the timeframes specified in the relevant restriction.*

*Where the most recent course of PBS-subsidised TNF-alfa antagonist treatment was approved under an initial treatment restriction after 1 March 2007, the patient must have been assessed for response to that course following a minimum of 12 weeks of treatment. Where the most recent course of PBS-subsidised TNF-alfa antagonist treatment was approved under an initial treatment restriction prior to 1 March 2007, the patient must have been assessed for response to that course following at least 4 weeks of treatment. These assessments must be provided to Medicare Australia no later than 4 weeks from the date the course was ceased.*

*If the response assessment to the previous course of TNF-alfa antagonist treatment is not submitted as detailed above, the patient will be deemed to have failed therapy with that particular course of TNF-alfa antagonist.*

*Authority applications must be made in writing and must include:*

- (a) a completed authority prescription form; and*
- (b) a completed Ankylosing Spondylitis PBS Authority Application - Supporting Information Form [www.medicareaustralia.gov.au] which includes a completed BASDAI Assessment Form with certification by the prescriber and the patient that the patient did not have access to their baseline BASDAI at the time of their assessment.*

*A maximum of 16 weeks of treatment with etanercept will be approved under this criterion.*

*Where fewer than 3 repeats are initially requested with the authority prescription, authority approvals for sufficient repeats to complete a maximum of 16 weeks of treatment may be requested by telephone.*

### NOTE:

No applications for increased maximum quantities and/or repeats will be authorised.

### Authority Required

Continuing treatment for all patients

Continuing PBS-subsidised treatment, by a rheumatologist, of an adult with a documented history of active ankylosing spondylitis who:

(a) has demonstrated a response to treatment with etanercept; and

(b) whose most recent course of PBS-subsidised therapy in this treatment cycle was with etanercept.

Response is defined as an improvement from baseline of at least 2 of the BASDAI and 1 of the following:

(a) an ESR measurement no greater than 25 mm per hour; or

(b) a CRP measurement no greater than 10 mg per L; or

(c) an ESR or CRP measurement reduced by at least 20% from baseline.

For a 'grandfather' patient who does not have baselines prior to commencing treatment with a TNF-alfa antagonist, see Note 5 for a definition of response to treatment.

Where only 1 acute phase reactant measurement is supplied in the first application for PBS-subsidised treatment, that same marker must be measured and supplied in all subsequent continuing treatment applications.

Where the most recent course of PBS-subsidised TNF-alfa antagonist treatment was approved under an initial treatment restriction after 1 March 2007, the patient must have been assessed for response to that course following a minimum of 12 weeks of treatment. Where the most recent course of PBS-subsidised TNF-alfa antagonist treatment was approved under an initial treatment restriction prior to 1 March 2007, the patient must have been assessed for response to that course following at least 4 weeks of treatment.

Applications for continuing treatment must be made in writing and should be posted to Medicare Australia no less than 2 weeks prior to the completion of the current treatment course.

Written applications for authorisation must include:

(a) a completed authority prescription form; and

(b) a completed Ankylosing Spondylitis PBS Authority Application - Supporting Information Form [www.medicareaustralia.gov.au] which includes a completed BASDAI Assessment Form with certification by the prescriber and the patient that the patient did not have access to their baseline BASDAI at the time of their continuing treatment assessment.

All measurements provided must be no more than 1 month old at the time of application.

A maximum of 24 weeks of treatment with etanercept will be authorised under this criterion.

Where fewer than 5 repeats are initially requested with the authority prescription, authority approvals for sufficient repeats to complete a maximum of 24 weeks of treatment may be requested by telephone.

## ANTINEOPLASTIC AND IMMUNOMODULATING AGENTS—CONT.

| Code  | Name, Restriction,<br>Manner of Administration and Form                                            | Max.<br>Qty | No. of<br>Rpts | Premium | Dispensed<br>Price for<br>Max. Qty<br>\$ | Maximum<br>Recordable<br>Value for<br>Safety Net<br>\$ | Proprietary Name and<br>Manufacturer |    |

**NOTE:**

No applications for increased maximum quantities and/or repeats will be authorised.

**NOTE:**

**TREATMENT OF ADULT PATIENTS WITH SEVERE ACTIVE PSORIATIC ARTHRITIS**

The following information applies to the prescribing under the Pharmaceutical Benefits Scheme (PBS) of the biological agents (adalimumab, etanercept and infliximab) for adult patients with severe active psoriatic arthritis.

Patients are eligible for PBS-subsidised treatment with only 1 of the above biological agents at any 1 time. Where the term 'biological agents' appears in the following NOTES and restrictions, it only refers to adalimumab, etanercept and infliximab.

From 1 August 2006, all patients will be able to commence a 'Biological Treatment Cycle' (Cycle), where they may trial adalimumab, etanercept or infliximab without having to meet the initial treatment criteria, that is they will not need to experience a disease flare, when swapping to the alternate agent. Under these interchangeability arrangements, within a single Cycle, patients may receive long-term treatment with a biological agent as long as they sustain a response to therapy.

Following demonstration of response to initial treatment, these biological agents are available under the PBS for continuing treatment as set out in the continuing treatment restriction for each agent.

Once patients have either failed or ceased to sustain a response to treatment 3 times, they are deemed to have completed a single Cycle and they must have, at a minimum, a 5-year break in PBS-subsidised biological therapy before they are eligible to commence another Cycle [further details are under '(5) Re-commencement of treatment after a 5-year break in PBS-subsidised therapy' below].

The 5-year break in therapy will be measured from the date the last approval for PBS-subsidised treatment was granted in the most recent Cycle to the date of the first application for initial treatment with a biological agent under the new Cycle.

Within the same Cycle, patients are not allowed to fail, or cease to respond to, the same PBS-subsidised biological agent more than once. Therefore once a patient fails to meet the response criteria for any biological agent, they must change to an alternate agent which they have not previously failed, if they wish to continue PBS-subsidised biological treatment.

Patients for whom a break in PBS-subsidised therapy of less than 5 years has occurred, and, who have failed therapy fewer than 3 times within a particular treatment Cycle, as defined in the relevant restriction, may commence a further course of treatment within that Cycle.

Patients for whom a break in PBS-subsidised therapy of 5 years or more has occurred, and, who have failed therapy fewer than 3 times within a particular treatment Cycle, as defined in the relevant restriction, are eligible to commence a new Cycle.

There is no limit to the number of Biological Treatment Cycles a patient may undertake in their lifetime.

How to prescribe biological agents for the treatment of severe active psoriatic arthritis after 1 August 2006.

**(1) Initial treatment.**

## ANTINEOPLASTIC AND IMMUNOMODULATING AGENTS—CONT.

| Code | Name, Restriction,<br>Manner of Administration and Form | Max.<br>Qty | No. of<br>Rpts | Premium | Dispensed                   | Maximum                                     | Proprietary Name and<br>Manufacturer |
|------|---------------------------------------------------------|-------------|----------------|---------|-----------------------------|---------------------------------------------|--------------------------------------|
|      |                                                         |             |                |         | Price for<br>Max. Qty<br>\$ | Recordable<br>Value for<br>Safety Net<br>\$ |                                      |

*Applications for initial treatment should be made where:*

- (i) patients have received no prior PBS-subsidised biological treatment and wish to commence such therapy (Initial 1); and*
- (ii) patients have received prior PBS-subsidised biological therapy and wish to trial an alternate agent (Initial 2) [further details are under 'Swapping therapy' below]; and*
- (iii) patients wish to re-commence treatment with a specific biological agent following a break in PBS-subsidised therapy with that specific agent (Initial 2).*

*All applications for initial treatment for non-grandfather patients will be limited to provide for a maximum of 16 weeks of therapy for all agents except for infliximab, for which a maximum of 22 weeks will be authorised. It is recommended that patients be reviewed in the month prior to completing their course of initial treatment to ensure uninterrupted biological agent supply.*

*Patients must be assessed for response to any course of PBS-subsidised initial treatment following a minimum of 12 weeks of therapy and this assessment must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased. Where a response assessment is not submitted to Medicare Australia within these timeframes, patients will be deemed to have failed to respond to treatment with that biological agent.*

*Grandfather patients.*

*Applications for patients who commenced treatment with etanercept prior to 17 March 2005 or adalimumab and infliximab prior to 16 March 2006, may apply for initial PBS-subsidised treatment as continuing therapy under the relevant initial treatment restriction (Initial 3). These patients access the PBS interchangeability arrangements in the same way as new patients who have not been treated with any biological agent prior to PBS listing of that agent.*

*Applications for initial PBS-subsidised treatment for grandfather patients will provide for a maximum of 24 weeks of treatment for all agents. Approval will be based on the criteria included in the relevant restriction.*

### *(2) Continuing treatment.*

*Following the completion of an initial treatment course with a specific biological agent, patients may qualify to receive up to 24 weeks of continuing treatment with that drug providing they have demonstrated an adequate response to treatment. Patients are eligible to receive continuing biological treatment with the same drug in courses of up to 24 weeks providing they continue to sustain the response.*

*Patients must be assessed for response to a course of continuing therapy, and the assessment must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased. Where a response assessment is not submitted to Medicare Australia within these timeframes, patients will be deemed to have failed to respond to treatment with that biological agent.*

### *(3) Swapping therapy.*

*Once an authority for initial treatment with the first PBS-subsidised biological agent is approved, patients may swap to an alternate biological agent without having to re-qualify with respect to either the indices of disease severity (i.e. erythrocyte sedimentation rate (ESR) or C-reactive protein (CRP) level, and active joint count) or the prior non-biological therapy requirements.*

*Patients may swap to an alternate biological agent at any time, regardless of whether they are receiving therapy (initial or continuing) with a biological agent at the time of the application or not.*

*Patients may alternate between therapy with any biological agent of their choice (1 at a time) providing:*

- (i) they have not received PBS-subsidised treatment with that particular biological agent previously; or*
- (ii) they have demonstrated an adequate response to that particular biological agent if they have previously trialled it on the PBS.*

*To ensure patients receive the maximum treatment opportunities allowed under the interchangeability arrangements, it is important that they are assessed for response to every course of treatment approved, within the timeframes specified in the relevant restriction.*

## ANTINEOPLASTIC AND IMMUNOMODULATING AGENTS—CONT.

| Code | Name, Restriction,<br>Manner of Administration and Form | Max.<br>Qty | No. of<br>Rpts | Premium | Dispensed                   | Maximum                                     | Proprietary Name and<br>Manufacturer |
|------|---------------------------------------------------------|-------------|----------------|---------|-----------------------------|---------------------------------------------|--------------------------------------|
|      |                                                         |             |                |         | Price for<br>Max. Qty<br>\$ | Recordable<br>Value for<br>Safety Net<br>\$ |                                      |

*To avoid confusion, applications for patients who wish to swap to an alternate biological agent should be accompanied by the approved authority prescription or remaining repeats for the biological agent the patient is ceasing.*

**(4) Baseline measurements to determine response.**

*Medicare Australia will determine whether a response to treatment has been demonstrated based on the baseline measurements of the indices of disease severity submitted with the first authority application for a biological agent. However, prescribers may provide new baseline measurements any time that an initial treatment authority is submitted within a treatment Cycle and Medicare Australia will assess response according to these revised baseline measurements.*

*To ensure consistency in determining response, the same indices of disease severity used to establish baseline at the commencement of treatment with each initial treatment application must be provided for all subsequent continuing treatment applications. Therefore, where only an ESR or CRP level is provided at baseline, an ESR or CRP level respectively must be provided to determine response. Similarly, where the baseline active joint count is based on total active joints (i.e. 20 or more active joints), response will be determined according to a reduction in the total number of active joints.*

**(5) Re-commencement of treatment after a 5-year break in PBS-subsidised therapy.**

*Patients who wish to trial a second or subsequent treatment Cycle following a break in PBS-subsidised biological therapy of at least 5 years, must re-qualify for initial treatment with respect to both the indices of disease severity. Patients must have received treatment with methotrexate or sulfasalazine or leflunomide, at an adequate dose, for a minimum of 3 months at the time the ESR or CRP levels and the active joint counts are measured.*

### **Authority Required**

#### **Initial 1**

*Initial PBS-subsidised treatment with etanercept, by a rheumatologist or clinical immunologist with expertise in the management of psoriatic arthritis, of adults who:*

- (1) have severe active psoriatic arthritis; and*
- (2) have received no prior PBS-subsidised biological treatment for this condition in this Treatment Cycle; and*
- (3) have failed to achieve an adequate response to:*
  - (a) methotrexate at a dose of at least 20 mg weekly for a minimum period of 3 months; and*
  - (b) sulfasalazine at a dose of at least 2 g per day for a minimum period of 3 months; or*
  - (c) leflunomide at a dose of up to 20 mg daily for a minimum period of 3 months.*

*Patients must have had the psoriatic component of their disease confirmed by a dermatologist or by biopsy at any time.*

*If treatment with any of the above-mentioned drugs is contraindicated according to the relevant TGA-approved Product Information, please provide details at the time of application.*

*If intolerance to treatment develops during the relevant period of use, which is of a severity to necessitate permanent treatment withdrawal, please provide details of the degree of this toxicity at the time of application. Details of acceptable toxicities, including severity, can be found on the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au)).*

continued ➡

## ANTINEOPLASTIC AND IMMUNOMODULATING AGENTS—CONT.

| Code | Name, Restriction,<br>Manner of Administration and Form | Max.<br>Qty | No. of<br>Rpts | Premium | Dispensed                   | Maximum                                     | Proprietary Name and<br>Manufacturer |
|------|---------------------------------------------------------|-------------|----------------|---------|-----------------------------|---------------------------------------------|--------------------------------------|
|      |                                                         |             |                |         | Price for<br>Max. Qty<br>\$ | Recordable<br>Value for<br>Safety Net<br>\$ |                                      |

*The following initiation criteria indicate failure to achieve an adequate response and must be demonstrated in all patients at the time of the initial application:*

*an elevated erythrocyte sedimentation rate (ESR) greater than 25 mm per hour or a C-reactive protein (CRP) level greater than 15 mg per L; AND either*

*(i) an active joint count of at least 20 active (swollen and tender) joints; or*

*(ii) at least 4 active joints from the following list of major joints:*

*— elbow, wrist, knee and/or ankle (assessed as swollen and tender); and/or*

*— shoulder and/or hip (assessed as pain in passive movement and restriction of passive movement, where pain and limitation of movement are due to active disease and not irreversible damage such as joint destruction or bony overgrowth).*

*If the above requirement to demonstrate an elevated ESR or CRP cannot be met, the application must state the reasons why this criterion cannot be satisfied.*

*The authority application must be made in writing and must include:*

*(1) a completed authority prescription form; and*

*(2) a completed Psoriatic Arthritis PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))] which includes details of the patient's ESR and CRP measurements and the patient's active joint count which must have been assessed no earlier than 1 month prior to the date of application; and*

*(3) a copy of the signed patient acknowledgement form which is included in the Supporting Information Form. Completion of this form declares that the patient understands and acknowledges that PBS-subsidised treatment will cease if they do not demonstrate the response to treatment required to support continuation of PBS-subsidised treatment at any assessment where a response must be demonstrated.*

*Where fewer than 3 repeats are requested at the time of the initial application, authority approvals for sufficient repeats to complete a maximum of 16 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

*Patients who fail to demonstrate a response to treatment with etanercept under this restriction will not be eligible to receive further PBS-subsidised treatment with this drug, in this Treatment Cycle.*

### **Authority Required**

#### **Initial 2**

*Initial PBS-subsidised treatment with etanercept, by a rheumatologist or clinical immunologist with expertise in the management of psoriatic arthritis, of adults who:*

*(1) have a documented history of severe active psoriatic arthritis; and*

*(2) have received prior PBS-subsidised biological treatment for this condition in this Treatment Cycle and are eligible to receive further biological therapy; and*

*(3) have not failed treatment with etanercept during the current Treatment Cycle.*

*Applications for patients who have demonstrated a response to PBS-subsidised etanercept treatment within this Treatment Cycle and who wish to re-commence etanercept treatment within the same Cycle following a break in therapy, will only be approved where evidence of a response to the patient's most recent course of PBS-subsidised etanercept treatment has been submitted to Medicare Australia within 1 month of cessation of treatment.*

*Where the most recent course of PBS-subsidised etanercept treatment was approved under either of the initial treatment restrictions (i.e. for patients with no prior PBS-subsidised biological therapy or, under this restriction, for patients who have received previous PBS-subsidised biological therapy), patients must have been assessed for response following a minimum of 12 weeks of therapy. This assessment must be provided to Medicare Australia no later than 4 weeks from the date that course was ceased.*

*Where the most recent course of PBS-subsidised etanercept treatment was approved under the continuing treatment criteria, patients must have been assessed for response, and the assessment must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased.*

## ANTINEOPLASTIC AND IMMUNOMODULATING AGENTS—CONT.

| Code                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Name, Restriction,<br>Manner of Administration and Form                                            | Max.<br>Qty | No. of<br>Rpts | Premium | Dispensed<br>Price for<br>Max. ### NOTE:

No applications for increased maximum quantities and/or repeats will be authorised.

### Authority Required

#### *Initial 3*

Initial PBS-subsidised supply for continuing treatment with etanercept, by a rheumatologist or clinical immunologist with expertise in the management of psoriatic arthritis, of adults who:

- (1) have a documented history of severe active psoriatic arthritis; and
- (2) were receiving treatment with etanercept prior to 17 March 2005; and
- (3) have demonstrated a response as specified in the criteria for continuing PBS-subsidised treatment with etanercept.

*The authority application must be made in writing and must include:*

- (1) a completed authority prescription form; and
  - (2) a completed Psoriatic Arthritis PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))]; and
  - (3) a copy of the signed patient acknowledgement form which is included in the Supporting Information Form.
- Completion of this form declares that the patient understands and acknowledges that PBS-subsidised treatment will cease if they do not demonstrate the response to treatment required to support continuation of PBS-subsidised treatment at any assessment where a response must be demonstrated.

A maximum of 24 weeks of treatment with etanercept will be authorised under this restriction.

Where fewer than 5 repeats are requested at the time of the application, authority approvals for sufficient repeats to complete a maximum of 24 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).

**NOTE:**

No applications for increased maximum quantities and/or repeats will be authorised.

**NOTE:****TREATMENT OF ADULT PATIENTS WITH SEVERE ACTIVE RHEUMATOID ARTHRITIS**

The following information applies to the prescribing under the Pharmaceutical Benefits Scheme (PBS) of the biological disease modifying anti-rheumatic drugs (bDMARDs) for adults with severe active rheumatoid arthritis. Where the term bDMARD appears in the following notes and restrictions it refers to the tumour necrosis factor (TNF) alfa antagonists (adalimumab, etanercept, infliximab), the chimeric anti-CD20 monoclonal antibody (rituximab), the interleukin-1 inhibitor (anakinra) and the T-cell co-stimulation modulator (abatacept).

Patients are eligible for PBS-subsidised treatment with only 1 of the above biological disease modifying anti-rheumatic drugs at any 1 time.

PBS-subsidised infliximab, anakinra, rituximab and abatacept must be used in combination with methotrexate at a dose of at least 7.5 mg weekly. Where a patient cannot tolerate 7.5 mg of methotrexate weekly, they are only eligible to receive PBS-subsidised etanercept and adalimumab.

In order to be eligible to receive PBS-subsidised treatment with rituximab, a patient must have already failed to demonstrate a response to at least 1 course of treatment with a PBS-subsidised TNF-alfa antagonist.

From 1 March 2008, under the PBS, all patients will be able to commence a Treatment Cycle where they may trial PBS-subsidised bDMARD agents without having to experience a disease flare when swapping to an alternate agent. Under these interchangeability arrangements, within a single Treatment Cycle, a patient may continue to receive long-term treatment with a bDMARD while they continue to show a response to therapy.

A patient who received PBS-subsidised bDMARD treatment prior to 1 March 2008 is considered to be in their first Cycle as of 1 March 2008.

Within the same Treatment Cycle, a patient cannot trial and fail, or cease to respond to, the same PBS-subsidised bDMARD more than once.

Once a patient has either failed or ceased to respond to treatment 3 times, they are deemed to have completed a Treatment Cycle and they must have, at a minimum, a 5-year break in PBS-subsidised bDMARD therapy before they are eligible to commence the next Cycle.

For patients who have failed PBS-subsidised treatment with 3 bDMARDs prior to 1 March 2008 please contact Medicare Australia on 1800 700 270.

The 5-year break is measured from the date of the last approval for PBS-subsidised bDMARD treatment in the most recent Cycle to the date of the first application for initial treatment with a bDMARD under the new Treatment Cycle.

A patient who has failed fewer than 3 bDMARDs in a Treatment Cycle and who has a break in therapy of less than 5 years, may commence a further course of treatment within the same Treatment Cycle.

A patient who has failed fewer than 3 bDMARDs in a Treatment Cycle and who has a break in therapy of more than 5 years, may commence a new Treatment Cycle.

There is no limit to the number of Treatment Cycles a patient may undertake in their lifetime.

If patients fail to respond to a particular bDMARD within a single Treatment Cycle, they are not eligible to receive further PBS-subsidised treatment with that drug until they commence the next Cycle.

(1) How to prescribe PBS-subsidised bDMARD therapy after 1 March 2008.

## (a) Initial treatment.

Applications for initial treatment should be made where:

- (i) a patient has received no prior PBS-subsidised bDMARD treatment in this Treatment Cycle and wishes to commence such therapy, excluding rituximab (Initial 1); or
- (ii) a patient has received prior PBS-subsidised (initial or continuing) bDMARD therapy and wishes to trial an alternate agent (Initial 2) [further details are under 'Swapping therapy' below]; or
- (iii) a patient wishes to re-commence treatment with a specific bDMARD following a break in PBS-subsidised therapy with that agent (Initial 2).

Initial treatment authorisations will be limited to provide a maximum of 16 weeks of therapy for etanercept, adalimumab, anakinra and abatacept, 22 weeks of therapy for infliximab and 2 infusions of rituximab.

From 1 March 2008, a patient must be assessed for response to any course of initial PBS-subsidised treatment (excluding rituximab) following a minimum of 12 weeks of therapy and this assessment must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased.

Rituximab patients must be assessed following a minimum of 12 weeks after the first infusion, and this assessment must be submitted to Medicare Australia within 4 weeks.

Where a response assessment is not submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with that bDMARD.

For second and subsequent courses of PBS-subsidised bDMARD (excluding rituximab) treatment it is recommended that a patient is reviewed in the month prior to completing their current course of treatment and that an application is submitted to Medicare Australia no later than 2 weeks prior to the patient completing their current treatment course.

### Rituximab patients:

A further application may be submitted to Medicare Australia 24 weeks after the first infusion. New baselines may be submitted with this application if appropriate.

## (b) Continuing treatment.

Following the completion of an initial treatment course with a specific bDMARD (excluding rituximab), a patient may qualify to receive up to 24 weeks of continuing treatment with that drug providing they have demonstrated an adequate response to treatment. The patient remains eligible to receive continuing bDMARD treatment with the same drug in courses of up to 24 weeks providing they continue to sustain the response.

It is recommended that a patient be reviewed in the month prior to completing their current course of treatment to ensure uninterrupted bDMARD supply.

Assessments of response to a course of PBS-subsidised therapy must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased.

### Rituximab patients:

A patient may qualify to receive a further course of treatment (every 24 weeks) with this agent providing they have demonstrated an adequate response to treatment following a minimum of 12 weeks after the first infusion of their most recent treatment with rituximab. The patient remains eligible to receive a course of rituximab every 24 weeks providing they continue to demonstrate a response as specified in the restriction.

Where a response assessment is not submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with that bDMARD.

## (2) Swapping therapy.

Once initial treatment with the first PBS-subsidised bDMARD is approved, a patient may swap to an alternate bDMARD within the same Treatment Cycle without having to requalify with respect to the indices of disease severity (i.e. the erythrocyte sedimentation rate (ESR), the C-reactive protein (CRP) levels and the joint count) or the prior non-bDMARD therapy requirements. However the requirement for concomitant treatment with methotrexate, where it applies, must be met for each bDMARD trialled.

## ANTINEOPLASTIC AND IMMUNOMODULATING AGENTS—CONT.

| Code | Name, Restriction,<br>Manner of Administration and Form | Max.<br>Qty | No. of<br>Rpts | Premium | Dispensed                   | Maximum                                     | Proprietary Name and<br>Manufacturer |
|------|---------------------------------------------------------|-------------|----------------|---------|-----------------------------|---------------------------------------------|--------------------------------------|
|      |                                                         |             |                |         | Price for<br>Max. Qty<br>\$ | Recordable<br>Value for<br>Safety Net<br>\$ |                                      |

*Patients who are not able to complete a minimum of 12 weeks of an initial treatment course will be deemed to have failed treatment with that agent.*

*A patient may trial an alternate bDMARD at any time, regardless of whether they are receiving therapy (initial or continuing) with a bDMARD at the time of the application. However, they cannot swap to a particular bDMARD if they have failed to respond to prior treatment with that drug within the same Treatment Cycle.*

*In order to trial rituximab, a patient must have trialled and failed to demonstrate a response to at least 1 PBS-subsidised TNF- $\alpha$  antagonist treatment.*

*To ensure a patient receives the maximum treatment opportunities allowed under the interchangeability arrangements, it is important that they are assessed for response to every course of treatment approved, within the timeframes specified in the relevant restriction.*

*PBS subsidy does not allow for patients to receive treatment with another PBS-subsidised biological agent during the required treatment-free period applying to patients who have demonstrated a response to their most recent course of rituximab. This means that patients who have demonstrated a response to a course of rituximab must have a PBS-subsidised biological therapy treatment-free period of at least 22 weeks, immediately following the second infusion, before swapping to an alternate bDMARD. Patients who fail to respond to rituximab and who qualify and wish to trial a course of an alternate bDMARD may do so without having to have any treatment-free period.*

*To avoid confusion, an application for a patient who wishes to swap to an alternate bDMARD should be accompanied by the approved authority prescription or remaining repeats for the bDMARD the patient is ceasing.*

### **NOTE:**

*(3) Baseline measurements to determine response.*

*Medicare Australia will determine whether a response to treatment has been demonstrated based on the baseline measurements of the joint count, ESR and/or CRP submitted with the first authority application for a bDMARD. However, prescribers may provide new baseline measurements any time that an initial treatment authority application is submitted within a Treatment Cycle and Medicare Australia will assess response according to these revised baseline measurements.*

*To ensure consistency in determining response, the same indices of disease severity used to establish baseline at the commencement of treatment with each initial treatment application must be provided for all subsequent continuing treatment applications. Therefore, where only an ESR or CRP level is provided at baseline, an ESR or CRP level respectively must be provided to determine response. Similarly, where the baseline active joint count is based on total active joints (i.e. more than 20 active joints), response will be determined according to the reduction in the total number of active joints. Where the baseline is determined on total number of major joints, the response must be demonstrated on the total number of major joints.*

*The baseline joint and blood counts should be performed whilst the patient is still on treatment or within 1 month of ceasing prior treatment.*

*(4) Re-commencement of treatment after a 5-year break in PBS-subsidised therapy.*

*A patient who wishes to trial a second or subsequent Treatment Cycle following a break in PBS-subsidised bDMARD therapy of at least 5 years, must requalify for initial treatment with respect to the indices of disease severity. Patients must have received treatment with at least 1 non-biological DMARD, at an adequate dose, for a minimum of 3 months at the time the ESR and/or CRP levels and the active joint count are measured.*

*(5) Patients 'grandfathered' onto PBS-subsidised treatment with rituximab or abatacept.*

*From 1 March 2008, a patient who commenced treatment with rituximab for severe rheumatoid arthritis prior to 7 March 2007 or abatacept for severe rheumatoid arthritis prior to 1 November 2007 and who was 'grandfathered' on to PBS-subsidised therapy, and who continues to receive treatment in the same Treatment Cycle, will have further applications for treatment with rituximab or abatacept assessed under the continuing treatment restriction.*

## ANTINEOPLASTIC AND IMMUNOMODULATING AGENTS—CONT.

| Code | Name, Restriction,<br>Manner of Administration and Form | Max.<br>Qty | No. of<br>Rpts | Premium | Dispensed                   | Maximum                                     | Proprietary Name and<br>Manufacturer |
|------|---------------------------------------------------------|-------------|----------------|---------|-----------------------------|---------------------------------------------|--------------------------------------|
|      |                                                         |             |                |         | Price for<br>Max. Qty<br>\$ | Recordable<br>Value for<br>Safety Net<br>\$ |                                      |

*A patient may only qualify for PBS-subsidised treatment under this criterion once. A maximum of 24 weeks of treatment with abatacept will be authorised under this criterion.*

*'Grandfather' arrangements will only apply for the first Treatment Cycle. For the second and subsequent Cycles, a 'grandfather' patient must requalify for initial treatment under the criteria that applies to a new patient. See 'Re-commencement of treatment after a 5-year break in PBS-subsidised therapy' above for further details.*

### **Authority Required**

#### *Initial 1 (new patients)*

*Application for initial PBS-subsidised treatment with etanercept, by a rheumatologist or clinical immunologist with expertise in the management of rheumatoid arthritis, of adults who:*

- (a) have severe active rheumatoid arthritis; and*
- (b) have received no prior PBS-subsidised treatment with a bDMARD for this condition in this treatment cycle; and*
- (c) have failed to achieve an adequate response to the following treatments:*
  - (i) methotrexate at a dose of at least 20 mg weekly; and*
  - (ii) methotrexate (at a minimum dose of 7.5 mg weekly), in combination with 2 other non-biological disease modifying anti-rheumatic drugs (DMARDs), for a minimum of 3 months; and*
  - (iii) a minimum of 3 months' treatment with:*
    - leflunomide alone; or*
    - leflunomide in combination with methotrexate; or*
    - cyclosporin.*

*If treatment with any of the above-mentioned drugs is contraindicated according to the relevant TGA-approved Product Information, please provide details at the time of application.*

*If intolerance to treatment develops during the relevant period of use, which is of a severity necessitating permanent treatment withdrawal, please provide details of the degree of this toxicity at the time of application.*

*Details of the accepted toxicities, including severity, can be found on the Medicare Australia website [www.medicareaustralia.gov.au].*

*The following initiation criteria indicate failure to achieve an adequate response and must be demonstrated in all patients at the time of the initial application:*

*an elevated erythrocyte sedimentation rate (ESR) greater than 25 mm per hour or a C-reactive protein (CRP) level greater than 15 mg per L;*

*AND either*

- (i) a total active joint count of at least 20 active (swollen and tender) joints; or*
- (ii) at least 4 active joints from the following list of major joints:*
  - elbow, wrist, knee and/or ankle (assessed as swollen and tender); and/or*
  - shoulder and/or hip (assessed as pain in passive movement and restriction of passive movement, where pain and limitation of movement are due to active disease and not irreversible damage such as joint destruction or bony overgrowth).*

*All tests and assessments should be performed preferably whilst still on treatment, but no longer than 1 month following cessation of the most recent prior treatment.*

*If the above requirement to demonstrate an elevated ESR or CRP cannot be met, the application must state the reasons why this criterion cannot be satisfied.*

## ANTINEOPLASTIC AND IMMUNOMODULATING AGENTS—CONT.

| Code | Name, Restriction,<br>Manner of Administration and Form | Max.<br>Qty | No. of<br>Rpts | Premium | Dispensed                   | Maximum                                     | Proprietary Name and<br>Manufacturer |
|------|---------------------------------------------------------|-------------|----------------|---------|-----------------------------|---------------------------------------------|--------------------------------------|
|      |                                                         |             |                |         | Price for<br>Max. Qty<br>\$ | Recordable<br>Value for<br>Safety Net<br>\$ |                                      |

*The authority application must be made in writing and must include:*

- (1) a completed authority prescription form; and*
- (2) a completed Rheumatoid Arthritis PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))] which includes details of the patient's ESR and CRP measurements and the patient's active joint count which must have been assessed no earlier than 1 month prior to the date of application; and*
- (3) a signed patient acknowledgement.*

*A maximum of 16 weeks of treatment will be authorised under this restriction.*

*Where fewer than 3 repeats are requested at the time of the initial application, authority approvals for sufficient repeats to complete a maximum of 16 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

*Assessment of a patient's response to an initial course of treatment must be made after at least 12 weeks of treatment so that there is adequate time for a response to be demonstrated. This assessment, which will be used to determine eligibility for continuing treatment, must be submitted to Medicare Australia no later than 1 month from the date of completion of this initial course of treatment. Where a response assessment is not undertaken and submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with etanercept.*

*Patients who fail to demonstrate a response to treatment with etanercept under this restriction will not be eligible to receive further PBS-subsidised treatment with this drug, in this treatment cycle. Patients may re-trial etanercept after a minimum of 5 years have elapsed between the date the last prescription for a PBS-subsidised bDMARD was approved in this cycle and the date of the first application under the new cycle.*

### **Authority Required**

*Initial 2 (change or re-commencement)*

*Application for an initial course of PBS-subsidised treatment with etanercept, by a rheumatologist or clinical immunologist with expertise in the management of rheumatoid arthritis, of adults who:*

- (a) have a documented history of severe active rheumatoid arthritis; and*
- (b) have received prior PBS-subsidised bDMARD treatment for this condition in this treatment cycle and are eligible to receive further bDMARD therapy.*

*The authority application must be made in writing and must include:*

- (1) a completed authority prescription form; and*
- (2) a completed Rheumatoid Arthritis PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))].*

*Applications for patients who have received PBS-subsidised treatment with etanercept within this treatment cycle and who wish to re-commence therapy with this drug within this same cycle, must be accompanied by evidence of a response to the patient's most recent course of PBS-subsidised etanercept treatment, within the timeframes specified below.*

*A maximum of 16 weeks of treatment will be authorised under this restriction.*

*Where fewer than 3 repeats are requested at the time of the initial application, authority approvals for sufficient repeats to complete a maximum of 16 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

*Where the most recent course of PBS-subsidised etanercept treatment was approved under either of the initial treatment restrictions (i.e. for patients with no prior PBS-subsidised bDMARD therapy or, under this restriction, for patients who have received previous PBS-subsidised bDMARD therapy), patients must have been assessed for response following a minimum of 12 weeks of therapy. This assessment must be provided to Medicare Australia no later than 4 weeks from the date that course was ceased.*

## ANTINEOPLASTIC AND IMMUNOMODULATING AGENTS—CONT.

|------|---------------------------------------------------------|-------------|----------------|---------|-----------------------------|---------------------------------------------|--------------------------------------|
|      |                                                         |             |                |         | Price for<br>Max. Qty<br>\$ | Recordable<br>Value for<br>Safety Net<br>\$ |                                      |

*Where the most recent course of PBS-subsidised etanercept treatment was approved under the continuing treatment criteria, patients must have been assessed for response, and the assessment must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased.*

*Patients who fail to demonstrate a response to treatment with etanercept under this restriction will not be eligible to receive further PBS-subsidised treatment with this drug, in this treatment cycle. Patients may re-trial etanercept after a minimum of 5 years have elapsed between the date the last prescription for a PBS-subsidised bDMARD was approved in this cycle and the date of the first application under the new cycle.*

### Authority Required

*Initial treatment, by a rheumatologist or clinical immunologist with expertise in the management of rheumatoid arthritis, of patients aged 18 years or older with a documented history of severe active polyarticular course juvenile chronic arthritis with onset prior to the age of 18 years; AND*

*(a) who have signed a patient agreement form indicating that they understand and acknowledge that PBS-subsidised treatment will cease if the predetermined response criteria do not support continuation of PBS-subsidised treatment; AND*

*(b) who have failed to achieve an adequate response to methotrexate at a dose of at least 20 mg weekly; AND*

*(c) who have failed to achieve an adequate response to methotrexate, in combination with 2 other disease modifying anti-rheumatic drugs (DMARDs), for a minimum of 3 months; AND*

*(d) who have subsequently failed to achieve an adequate response following a minimum of 3 months' treatment with:*

*(i) leflunomide alone; or*

*(ii) leflunomide in combination with methotrexate; or*

*(iii) cyclosporin.*

*If treatment with any of the above-mentioned drugs is contraindicated according to the relevant TGA-approved Product Information, or intolerance of a severity necessitating permanent treatment withdrawal develops during the relevant period of use, the patient is exempted from demonstrating an inadequate response to the above treatment regimens. Details of the contraindication or intolerance, including the degree of toxicity, must be provided at the time of application.*

*The following criteria must be met in order to demonstrate failure to achieve an adequate response:*

*an elevated erythrocyte sedimentation rate (ESR) greater than 25 mm per hour or a C-reactive protein (CRP) level greater than 15 mg per L; AND either*

*(i) an active joint count of at least 20 active (swollen and tender) joints; or*

*(ii) at least 4 active joints from the following list:*

*— elbow, wrist, knee and/or ankle (assessed as swollen and tender); and/or*

*— shoulder, cervical spine and/or hip (assessed as pain in passive movement and restriction of passive movement, where pain and limitation of movement are due to active disease and not irreversible damage such as joint destruction or bony overgrowth).*

*If the above requirement to demonstrate an elevated ESR or CRP cannot be met, the application must state the reasons why this criterion cannot be satisfied.*

*The authority application must be in writing and must include sufficient information to determine the patient's eligibility according to the above criteria. The date of joint assessment must be provided.*

*Where fewer than 3 repeats are requested at the time of the initial authority application, authority approvals for sufficient repeats to complete a maximum of 4 months of treatment may be requested by telephone. Under no circumstances will telephone approvals be granted for initial or continuing authority applications, or for treatment that would otherwise extend the initial treatment period beyond 4 months.*

| 9089J                                                                                                                                                                                                                                                                                                                                                                                         | Injections 50 mg in 1 mL single use pre-filled syringes, 4                                         | 1           | 3              | ..      | 1773.94                                  | 31.30                                                  | Enbrel                               | WX |

### NOTE:

No applications for increased maximum quantities and/or repeats will be authorised.

### Authority Required

#### *Continuing treatment*

Continuing PBS-subsidised treatment with etanercept, by a rheumatologist or clinical immunologist with expertise in the management of rheumatoid arthritis, of adults:

- (a) who have a documented history of severe active rheumatoid arthritis; and
- (b) who have demonstrated an adequate response to treatment with etanercept; and
- (c) whose most recent course of PBS-subsidised bDMARD treatment in this treatment cycle was with etanercept.

An adequate response to treatment is defined as:

an ESR no greater than 25 mm per hour or a CRP level no greater than 15 mg per L or either marker reduced by at least 20% from baseline;

AND either of the following:

- (i) a reduction in the total active (swollen and tender) joint count by at least 50% from baseline, where baseline is at least 20 active joints; or
- (ii) a reduction in the number of the following major active joints, from at least 4, by at least 50%:
  - elbow, wrist, knee and/or ankle (assessed as swollen and tender); and/or
  - shoulder and/or hip (assessed as pain in passive movement and restriction of passive movement, where pain and limitation of movement are due to active disease and not irreversible damage such as joint destruction or bony overgrowth).

The authority application must be made in writing and must include:

- (1) a completed authority prescription form; and
- (2) a completed Rheumatoid Arthritis PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))].

A maximum of 24 weeks of treatment will be approved under this restriction.

Where fewer than 5 repeats are requested at the time of the application, authority approvals for sufficient repeats to complete a maximum of 24 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).

*All applications for continuing treatment with etanercept must include a measurement of response to the prior course of therapy. This assessment must be provided to Medicare Australia no later than 4 weeks from the cessation of that treatment course. If the application is the first application for continuing treatment with etanercept, it must be accompanied by an assessment of response to a minimum of 12 weeks of treatment with an initial treatment course.*

*Patients who fail to demonstrate a response to treatment with etanercept under this restriction will not be eligible to receive further PBS-subsidised treatment with this drug, in this treatment cycle. Patients may re-trial etanercept after a minimum of 5 years have elapsed between the date the last prescription for a PBS-subsidised bDMARD was approved in this cycle and the date of the first application under the new cycle.*

### **Authority Required**

*Initial PBS-subsidised supply for continuing treatment, by a rheumatologist or clinical immunologist with expertise in the management of rheumatoid arthritis, of patients aged 18 years or older with a documented history of severe active polyarticular course juvenile chronic arthritis with onset prior to the age of 18 years, and who were receiving treatment with etanercept prior to 1 December 2002; AND*

*(a) who have signed a patient agreement form indicating that they understand and acknowledge that PBS-subsidised treatment will cease if the predetermined response criteria do not support continuation of PBS-subsidised treatment; AND*

*(b) who have demonstrated a response as specified in the criteria for continuing PBS-subsidised treatment with etanercept.*

*The authority application must be in writing and must include sufficient information to determine the patient's eligibility. The date of assessment of the patient must be provided.*

### **Authority Required**

*Continuing PBS-subsidised treatment, by a rheumatologist or clinical immunologist with expertise in the management of rheumatoid arthritis, of patients aged 18 years or older with a documented history of severe active polyarticular course juvenile chronic arthritis with onset prior to the age of 18 years, who, at the time of application, demonstrate an adequate response to treatment with etanercept as manifested by:*

*an ESR no greater than 25 mm per hour or a CRP level no greater than 15 mg per L or either marker reduced by at least 20% from baseline; AND 1 or more of the following:*

*(i) an active joint count of fewer than 10 active (swollen and tender) joints; or*

*(ii) a reduction in the active (swollen and tender) joint count by at least 50% from baseline; or*

*(iii) a reduction in the number of the following active joints, from at least 4, by at least 50%:*

*— elbow, wrist, knee and/or ankle (assessed as swollen and tender); and/or*

*— shoulder, cervical spine and/or hip (assessed as pain in passive movement and restriction of passive movement, where pain and limitation of movement are due to active disease and not irreversible damage such as joint destruction or bony overgrowth).*

*All authority applications for continuing treatment with etanercept must be in writing and must include sufficient information to determine the patient's response according to the above criteria. The date of assessment of the patient must be provided.*

*Patients who fail to demonstrate an adequate response, as specified in the criteria for continuing treatment with etanercept, will not be eligible to recommence treatment with etanercept within 12 months of the date on which treatment was ceased.*

*Where re-treatment with etanercept after a break in PBS-subsidised treatment with the drug is being sought, the reason for and date of cessation of the previous treatment course with etanercept must be included in the application.*

**NOTE:**

No applications for increased maximum quantities and/or repeats will be authorised.

**NOTE:**

**TREATMENT OF ADULT PATIENTS WITH SEVERE CHRONIC PLAQUE PSORIASIS**

The following information applies to the prescribing under the Pharmaceutical Benefits Scheme (PBS) of the biological agents efalizumab, etanercept and infliximab, for adult patients with severe chronic plaque psoriasis. Therefore, where the term 'biological agents' appears in the following NOTES and restrictions, it only refers to efalizumab, etanercept and infliximab.

From 1 December 2007, all patients will be able to commence a 'Biological Treatment Cycle' (Cycle), where they may trial efalizumab, etanercept or infliximab without having to meet the initial treatment criteria, that is they will not need to experience a disease flare when swapping to an alternate agent. Under these interchangeability arrangements, within a single Cycle, patients may receive long-term treatment with a biological agent as long as they sustain a response to therapy.

A patient who received PBS-subsidised biological agent treatment for chronic plaque psoriasis prior to 1 December 2007 is considered to be in their first Cycle as of 1 December 2007.

Patients are eligible for PBS-subsidised treatment with only 1 biological agent at any 1 time.

Within the same Treatment Cycle, a patient cannot trial and fail, or cease to respond to, the same PBS-subsidised biological agent more than once. Therefore once a patient fails to meet the response criteria for a PBS-subsidised biological agent, they must change to an alternate agent if they wish to continue PBS-subsidised biological treatment. A patient who, prior to 1 December 2007, was authorised to receive PBS-subsidised initial treatment for chronic plaque psoriasis with the same agent twice, is exempt from this condition in respect of applications approved prior to 1 December 2007.

Initial treatment with efalizumab consists of 16 weeks of therapy, with infliximab consists of 22 weeks of therapy, and with etanercept consists of 12 weeks of active therapy followed by a biological treatment-free period of at least 12 weeks. Response to treatment for all 3 agents must be assessed after 12 weeks of treatment.

Following demonstration of response to initial treatment, these biological agents are available as continuing therapy. Ongoing access to continuing treatment is available for as long as the response to therapy is sustained. In the case of efalizumab and infliximab, continuing treatment consists of 24 weeks of continuous active treatment. In the case of etanercept, continuing treatment consists of 12 weeks of active therapy followed by a biological treatment-free period of at least 12 weeks.

Patients must be assessed for response to each course of continuing treatment according to the criteria included in the relevant continuing treatment restriction.

Once a patient has either failed or ceased to respond to treatment 3 times, they are deemed to have completed a Treatment Cycle and they must have, at a minimum, a 5-year break in PBS-subsidised biological agent therapy before they are eligible to commence the next Cycle. The 5-year break is measured from the date of the last approval for PBS-subsidised biological agent treatment in the most recent Cycle to the date of the first application for initial treatment with a biological agent under the new Treatment Cycle.

Patients for whom a break in PBS-subsidised therapy of less than 5 years duration has occurred, and, who have failed therapy fewer than 3 times within a particular Cycle, as defined in the relevant restriction, may commence a further course of treatment within that Cycle.

## ANTINEOPLASTIC AND IMMUNOMODULATING AGENTS—CONT.

| Code | Name, Restriction,<br>Manner of Administration and Form | Max.<br>Qty | No. of<br>Rpts | Premium | Dispensed                   | Maximum                                     | Proprietary Name and<br>Manufacturer |
|------|---------------------------------------------------------|-------------|----------------|---------|-----------------------------|---------------------------------------------|--------------------------------------|
|      |                                                         |             |                |         | Price for<br>Max. Qty<br>\$ | Recordable<br>Value for<br>Safety Net<br>\$ |                                      |

*Patients for whom a break in PBS-subsidised therapy of 5 years or more has occurred, and, who have failed therapy fewer than 3 times within a particular Cycle, as defined in the relevant restriction, are eligible to commence a new Cycle.*

*There is no limit to the number of Biological Treatment Cycles a patient may undertake in their lifetime.*

*How to prescribe biological agents for the treatment of severe chronic plaque psoriasis after 1 December 2007.*

*There are separate restrictions for both the initial and continuing treatment for psoriasis affecting the whole body, versus psoriasis affecting the face, hands and feet.*

*(1) Application for approval for initial treatment.*

*Applications for a course of initial treatment should be made in the following situations:*

- (i) patients have received no prior PBS-subsidised biological treatment and wish to commence such therapy (Initial 1); and*
- (ii) patients have received prior PBS-subsidised biological therapy and wish to trial an alternate agent (Initial 2) [further details are under '(4) Swapping therapy' below]; and*
- (iii) patients who wish to re-commence treatment following a break in PBS-subsidised therapy with that agent (Initial 2).*

*All applications for initial treatment for non-grandfather patients will be limited to provide for a maximum of 16 weeks of therapy in the case of efalizumab, 12 weeks of therapy in the case of etanercept, and 22 weeks of treatment in the case of infliximab. Approval will be based on the criteria included in the relevant initial treatment restriction.*

*Grandfather patients (Infliximab only).*

*Applications for patients who commenced treatment with infliximab prior to 7 March 2007, may apply for initial PBS-subsidised treatment as continuing therapy under the relevant initial treatment restriction (Initial 3). These patients access the PBS interchangeability arrangements in the same way as new patients who have not been treated with a biological agent prior to PBS listing of that agent.*

*Applications for initial PBS-subsidised treatment for grandfather patients will provide for a maximum of 24 weeks of treatment. Approval will be based on the criteria included in the relevant restriction.*

*(2) Assessment of response to initial treatment.*

*When prescribing efalizumab or infliximab, where the initial treatment course is for 16 or 22 weeks respectively, a PASI assessment must be conducted after at least 12 weeks of treatment. This assessment must be submitted to Medicare Australia within 1 month of the completion of this initial treatment course. Where a response assessment is not undertaken and submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with efalizumab or infliximab. In circumstances where it is not possible to submit a response assessment within these timeframes, please call Medicare Australia on 1800 700 270 to discuss.*

*Applications for continuing treatment with efalizumab or infliximab must also be submitted to Medicare Australia prior to the completion of this initial course of therapy to ensure continuity of treatment for those patients who meet the continuation criterion and wish to continue on treatment with either efalizumab or infliximab.*

*When prescribing etanercept, a PASI assessment must be conducted at the completion of the 12 week initial treatment course. This assessment, which will be used to determine eligibility for future treatment according to the criterion included in the relevant continuing treatment restriction, must be submitted to Medicare Australia no later than 1 month from the date of completion of this initial course of treatment. Where a response assessment is not undertaken and submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with etanercept. In circumstances where it is not possible to submit a response assessment within these timeframes, please call Medicare Australia on 1800 700 270 to discuss.*

*The PASI assessment for continuing treatment must be performed on the same affected area as assessed at baseline.*

*(3) Application for continuing treatment.*

continued ➞

## ANTINEOPLASTIC AND IMMUNOMODULATING AGENTS—CONT.

| Code | Name, Restriction,<br>Manner of Administration and Form | Max.<br>Qty | No. of<br>Rpts | Premium | Dispensed                   | Maximum                                     | Proprietary Name and<br>Manufacturer |
|------|---------------------------------------------------------|-------------|----------------|---------|-----------------------------|---------------------------------------------|--------------------------------------|
|      |                                                         |             |                |         | Price for<br>Max. Qty<br>\$ | Recordable<br>Value for<br>Safety Net<br>\$ |                                      |

*As stated above, following the completion of an initial treatment course of efalizumab or infliximab to which an adequate response has been demonstrated, patients may qualify to receive up to 24 weeks of continuing treatment with efalizumab or infliximab. Patients are eligible to continue to receive continuous treatment with efalizumab or infliximab in 24 week courses providing they continue to sustain a response.*

*For second and subsequent courses of PBS-subsidised treatment with efalizumab or infliximab it is recommended that a patient is reviewed in the month prior to completing their current course of treatment and that an application is posted to Medicare Australia no later than 2 weeks prior to the patient completing their current treatment course.*

*At the completion of an initial 12 week treatment course of etanercept to which an adequate response has been demonstrated, followed by a biological treatment-free period of at least 12 weeks, patients may qualify to receive continuing treatment with etanercept. Continuing treatment is available in the form of 12 weeks of active etanercept treatment followed by a biological treatment-free period of at least 12 weeks. Patients are eligible to receive continuing treatment with etanercept on this cyclical basis, for as long as they continue to sustain a response. Continuing applications must be submitted at least 12 weeks after cessation of the most recent course of etanercept treatment.*

*A PASI assessment must be conducted for each course of continuing treatment for each biological agent, according to the requirements set out in the relevant restriction. Assessment of response to a course of PBS-subsidised therapy must be submitted to Medicare Australia no later than 1 month from the date that course was completed or treatment was ceased.*

*Where a response assessment is not submitted to Medicare Australia within these timeframes, patients will be deemed to have failed to sustain a response to treatment with that biological agent. In circumstances where it is not possible to submit a response assessment within these timeframes, please call Medicare Australia on 1800 700 270 to discuss.*

### **NOTE:**

#### **(4) Swapping therapy.**

*Once an authority for initial treatment with the first PBS-subsidised biological agent is approved, patients may swap to an alternate agent within the same Treatment Cycle without having to requalify with respect to disease severity (i.e. a PASI score of greater than 15), or prior treatment requirements.*

*Patients who are not able to complete a minimum of 12 weeks of an initial treatment course will be deemed to have failed treatment with that agent.*

*Patients may trial an alternate biological agent at any time, regardless of whether they are receiving therapy with a biological agent at the time of the application or not. However, they cannot swap to a particular agent if they have failed to respond to treatment with that particular agent in the same Cycle.*

*Patients who commenced treatment with infliximab prior to 7 March 2007 access these interchangeability arrangements in the same way as patients who have not.*

*PBS subsidy does not allow for patients to receive treatment with another PBS-subsidised biological agent during the required 12 week biological treatment-free period applying to patients who have demonstrated a response to their most recent course of etanercept. This means that patients who have demonstrated a response to a 12 week course of etanercept must have a PBS-subsidised biological therapy treatment-free period of at least 12 weeks, immediately following this course of treatment, before swapping to efalizumab or infliximab. Patients who fail to respond to etanercept and who qualify and wish to try a course of efalizumab or infliximab, may do so without having to have any treatment-free period.*

*To ensure patients receive the maximum treatment opportunities allowed under the interchangeability arrangements, it is important that they are assessed for response to every course of treatment approved, within the timeframes specified in the relevant restriction.*

*To avoid confusion, applications for patients who wish to swap to an alternate biological agent should be accompanied by the approved authority prescription or remaining repeats for the agent being ceased.*

#### **(5) Baseline measurements to determine response.**

continued ➞

## ANTINEOPLASTIC AND IMMUNOMODULATING AGENTS—CONT.

| Code | Name, Restriction,<br>Manner of Administration and Form | Max.<br>Qty | No. of<br>Rpts | Premium | Dispensed                   | Maximum                                     | Proprietary Name and<br>Manufacturer |
|------|---------------------------------------------------------|-------------|----------------|---------|-----------------------------|---------------------------------------------|--------------------------------------|
|      |                                                         |             |                |         | Price for<br>Max. Qty<br>\$ | Recordable<br>Value for<br>Safety Net<br>\$ |                                      |

Medicare Australia will determine whether a response to treatment has been demonstrated, based on the baseline PASI assessment submitted with the first authority application for a biological agent. However, prescribers may provide new baseline measurements any time that an initial treatment authority is submitted within a Treatment Cycle and subsequent response will be assessed according to this revised PASI score.

For new patients and patients commencing a new Cycle, the first baseline PASI assessment must be conducted, preferably while the patient is still receiving their most recent prior therapy, but no later than 1 month following cessation of such therapy, as outlined in the relevant restriction. This is not required for any subsequent PASI scores provided for these patients within the same Cycle, nor for patients who received initial PBS-subsidised therapy under a 'grandfather' restriction.

To ensure consistency in determining response, the same body area assessed at the baseline PASI assessment must be assessed for demonstration of response to treatment for the purposes of all continuing treatment applications.

(6) Re-commencement of treatment after a 5-year break in PBS-subsidised therapy.

Patients who wish to trial a second or subsequent Biological Treatment Cycle, following a break in PBS-subsidised biological therapy of at least 5 years, must requalify for initial treatment according to the criteria of the relevant restriction and index of disease severity. Patients must have had at least 1 prior treatment, as listed in the criteria, for a minimum of 6 weeks, and must have a PASI assessment conducted preferably whilst still on treatment, but no later than 1 month following cessation of treatment. The PASI assessment must be no older than 1 month at the time of application.

### Authority Required

Initial treatment [Initial 1, Whole body (New patients — No prior biological agent)]

Initial treatment as systemic monotherapy (other than methotrexate) by a dermatologist for adults 18 years and over who:

- (a) have severe chronic plaque psoriasis where lesions have been present for at least 6 months from the time of initial diagnosis; and
- (b) have not received any prior PBS-subsidised treatment with a biological agent for this condition in this Treatment Cycle; and
- (c) have signed a patient acknowledgement indicating they understand and acknowledge that PBS-subsidised treatment will cease if they do not meet the predetermined response criterion for ongoing PBS-subsidised treatment, as outlined in the restriction for continuing treatment (whole body); and
- (d) have failed to achieve an adequate response, as demonstrated by a Psoriasis Area and Severity Index (PASI) assessment, to at least 3 of the following 4 treatments:
  - (i) phototherapy (UVB or PUVA) for 3 treatments per week for at least 6 weeks; and/or
  - (ii) methotrexate at a dose of at least 10 mg weekly for at least 6 weeks; and/or
  - (iii) cyclosporin at a dose of at least 2 mg per kg per day for at least 6 weeks; and/or
  - (iv) acitretin at a dose of at least 0.4 mg per kg per day for at least 6 weeks.

If treatment with any of the above-mentioned drugs is contraindicated according to the relevant TGA-approved Product Information, or where phototherapy is contraindicated, please provide details at the time of application.

If intolerance to treatment develops during the relevant period of use, which is of a severity to necessitate permanent treatment withdrawal, please provide details of the degree of this toxicity at the time of application. Details of acceptable toxicities including severity, associated with phototherapy, methotrexate, cyclosporin and acitretin, can be found on the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au)).

|------|---------------------------------------------------------|-------------|----------------|---------|-----------------------------|---------------------------------------------|--------------------------------------|
|      |                                                         |             |                |         | Price for<br>Max. Qty<br>\$ | Recordable<br>Value for<br>Safety Net<br>\$ |                                      |

*The following initiation criterion indicates failure to achieve an adequate response and must be demonstrated in all patients at the time of the application:*

- (a) A current Psoriasis Area and Severity Index (PASI) score of greater than 15, as assessed, preferably whilst still on treatment, but no longer than 1 month following cessation of the most recent prior treatment.*
- (b) A PASI assessment must be completed for each prior treatment course, preferably whilst still on treatment, but no longer than 1 month following cessation of each course of treatment.*
- (c) The most recent PASI assessment must be no more than 1 month old at the time of application.*

*Applications for authorisation must be made in writing and must include:*

- (a) a completed authority prescription form; and*
- (b) a completed Severe Chronic Plaque Psoriasis PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))] which includes the following:*
  - (i) the completed current and previous Psoriasis Area and Severity Index (PASI) calculation sheets including the dates of assessment of the patient's condition [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))];* and
  - (ii) details of previous phototherapy and systemic drug therapy [dosage (where applicable), date of commencement and duration of therapy]; and*
  - (iii) the signed patient acknowledgement.*

*A maximum of 12 weeks of treatment with etanercept will be authorised under this restriction.*

*Where fewer than 2 repeats are requested at the time of the authority application, authority approvals for sufficient repeats to complete a maximum of 12 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday). Under no circumstances will telephone approvals be granted for initial authority applications, or for treatment that would otherwise extend the initial treatment period beyond 12 weeks.*

*A PASI assessment of the patient's response must be made at the completion of this 12 week initial treatment course. This assessment, which will be used to determine eligibility for continuing treatment, must be submitted to Medicare Australia no later than 1 month from the date of completion of this initial course of treatment. Where a response assessment is not undertaken and submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with etanercept. In circumstances where it is not possible to submit a response assessment within these timeframes, please call Medicare Australia on 1800 700 270 to discuss.*

*Patients who demonstrate a response to treatment according to the response criterion included in the continuing treatment restriction for etanercept, may access continuing treatment with etanercept following a biological treatment-free period of at least 12 weeks.*

*Patients who fail to demonstrate such a response to etanercept treatment may trial an alternate biological agent according to the interchangeability arrangements for biological agents for the treatment of severe chronic plaque psoriasis, without having to have a 12 week treatment-free period before doing so.*

### **Authority Required**

*Initial or re-Treatment [Initial 2, Whole body (Received prior biological agent under PBS)]*

*Treatment as systemic monotherapy (other than methotrexate) by a dermatologist for adults 18 years and over who:*

- (a) have a documented history of severe chronic plaque psoriasis; and*
- (b) have received prior PBS-subsidised treatment with a biological agent for this condition in this Treatment Cycle; and*
- (c) have not failed PBS-subsidised therapy with etanercept for the treatment of this condition in the current Treatment Cycle.*

*Applications for authorisation must be made in writing and must include:*

- (a) a completed authority prescription form; and*
- (b) a completed Severe Chronic Plaque Psoriasis PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))] which includes the following:*
  - (i) the completed current Psoriasis Area and Severity Index (PASI) calculation sheets including the dates of assessment of the patient's condition [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))];* and
  - (ii) details of prior biological treatment, including dosage, date and duration of treatment.*

*Applications for patients who have demonstrated a response to PBS-subsidised etanercept treatment within this Treatment Cycle and who wish to re-commence etanercept treatment within the same Cycle following a break in therapy, will only be approved where evidence of the patient's response to their most recent course of PBS-subsidised etanercept treatment has been submitted to Medicare Australia within 1 month of cessation of treatment.*

*A maximum of 12 weeks of treatment with etanercept will be authorised under this restriction.*

*Where fewer than 2 repeats are requested at the time of the authority application, authority approvals for sufficient repeats to complete a maximum of 12 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday). Under no circumstances will telephone approvals be granted for initial authority applications, or for treatment that would otherwise extend the initial treatment period beyond 12 weeks.*

*A PASI assessment of the patient's response must be made at the completion of this 12 week course of treatment. This assessment, which will be used to determine eligibility for continuing treatment, must be submitted to Medicare Australia no later than 1 month from the date of completion of this course of treatment. Where a response assessment is not undertaken and submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with etanercept. In circumstances where it is not possible to submit a response assessment within these timeframes, please call Medicare Australia on 1800 700 270 to discuss.*

*Patients who demonstrate a response to treatment according to the response criterion included in the continuing treatment restriction for etanercept, may access continuing treatment with etanercept following a biological treatment-free period of at least 12 weeks.*

*Patients who fail to demonstrate such a response to etanercept treatment and who qualify to trial an alternate biological agent according to the interchangeability arrangements for biological agents for the treatment of severe chronic plaque psoriasis, may do so without having to have a 12 week treatment-free period.*

*Patients who fail to demonstrate a response to treatment with each of the biological agents, efalizumab, etanercept and infliximab, are deemed to have completed this Treatment Cycle and must cease PBS-subsidised therapy. These patients may re-commence a new Biological Treatment Cycle after a minimum of 5 years has elapsed between the date the last prescription for a PBS-subsidised biological agent was approved in this Cycle and the date of the first application under the new Cycle.*

### **Authority Required**

*Continuing treatment (Whole body)*

*Continuing PBS-subsidised treatment as systemic monotherapy (other than methotrexate) by a dermatologist for adults 18 years and over:*

- (a) who have a documented history of severe chronic plaque psoriasis; and*
- (b) whose most recent course of PBS-subsidised biological treatment for this condition in this Treatment Cycle was with etanercept; and*
- (c) who have demonstrated an adequate response to their most recent course of treatment with etanercept.*

*An adequate response to treatment is defined as:*

*A Psoriasis Area and Severity Index (PASI) score which is reduced by 75% or more, or is sustained at this level, when compared with the pre-biological treatment baseline value for this Treatment Cycle.*

## Authority Required

*Initial treatment [Initial 1, Face, hand, foot (New patients — No prior biological agent)]*

*Initial treatment as systemic monotherapy (other than methotrexate) by a dermatologist for adults 18 years and over who:*

- (a) have severe chronic plaque psoriasis of the face, or palm of a hand or sole of a foot where the plaque or plaques have been present for at least 6 months from the time of initial diagnosis; and*
- (b) have not received any prior PBS-subsidised treatment with a biological agent for this condition in this Treatment Cycle; and*
- (c) have signed a patient acknowledgement indicating they understand and acknowledge that PBS-subsidised treatment will cease if they do not meet the predetermined response criterion for ongoing PBS-subsidised treatment, as outlined in the restriction for continuing treatment (face, hand, foot); and*
- (d) have failed to achieve an adequate response, as demonstrated by a Psoriasis Area and Severity Index (PASI) assessment, to at least 3 of the following 4 treatments:*
  - (i) phototherapy (UVB or PUVA) for 3 treatments per week for at least 6 weeks; and/or*
  - (ii) methotrexate at a dose of at least 10 mg weekly for at least 6 weeks; and/or*
  - (iii) cyclosporin at a dose of at least 2 mg per kg per day for at least 6 weeks; and/or*
  - (iv) acitretin at a dose of at least 0.4 mg per kg per day for at least 6 weeks.*

*If treatment with any of the above-mentioned drugs is contraindicated according to the relevant TGA-approved Product Information, or where phototherapy is contraindicated, please provide details at the time of application.*

*If intolerance to treatment develops during the relevant period of use, which is of a severity to necessitate permanent treatment withdrawal, please provide details of the degree of this toxicity at the time of application. Details of acceptable toxicities including severity, associated with phototherapy, methotrexate, cyclosporin and acitretin, can be found on the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au)).*

*The following initiation criterion indicates failure to achieve an adequate response and must be demonstrated in all patients at the time of the application:*

- (a) Chronic plaque psoriasis classified as severe due to a plaque or plaques on the face, palm of a hand or sole of a foot where:*
  - (i) at least 2 of the 3 Psoriasis Area and Severity Index (PASI) symptom subscores for erythema, thickness and scaling are rated as severe or very severe, as assessed, preferably whilst still on treatment, but no longer than 1 month following cessation of the most recent prior treatment; or*
  - (ii) the skin area affected is 30% or more of the face, palm of a hand or sole of a foot, as assessed, preferably whilst still on treatment, but no longer than 1 month following cessation of the most recent prior treatment.*
- (b) A PASI assessment must be completed for each prior treatment course, preferably whilst still on treatment, but no longer than 1 month following cessation of each course of treatment.*
- (c) The most recent PASI assessment must be no more than 1 month old at the time of application.*

*Applications for authorisation must be made in writing and must include:*

- (a) a completed authority prescription form; and*
- (b) a completed Severe Chronic Plaque Psoriasis PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))] which includes the following:*
  - (i) the completed current and previous Psoriasis Area and Severity Index (PASI) calculation sheets and face, hand, foot area diagrams including the dates of assessment of the patient's condition [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))]; and*
  - (ii) details of previous phototherapy and systemic drug therapy [dosage (where applicable), date of commencement and duration of therapy]; and*
  - (iii) the signed patient acknowledgement.*

*A maximum of 12 weeks of treatment with etanercept will be authorised under this restriction.*

*Patients who fail to demonstrate such a response to etanercept treatment and who qualify to trial an alternate biological agent according to the interchangeability arrangements for biological agents for the treatment of chronic plaque psoriasis, may do so without having to have a 12 week treatment-free period.*

*The PASI assessment for continuing treatment must be performed on the same affected area assessed at baseline.*

*Patients who fail to demonstrate a response to treatment with each of the biological agents, efalizumab, etanercept and infliximab, are deemed to have completed this Treatment Cycle and must cease PBS-subsidised therapy. These patients may re-commence a new Biological Treatment Cycle after a minimum of 5 years has elapsed between the date the last prescription for a PBS-subsidised biological agent was approved in this Cycle and the date of the first application under the new Cycle.*

### **Authority Required**

*Continuing treatment (Face, hand, foot)*

*Continuing PBS-subsidised treatment as systemic monotherapy (other than methotrexate) by a dermatologist for adults 18 years and over:*

- (a) who have a documented history of severe chronic plaque psoriasis of the face, or palm of a hand or sole of a foot; and*
- (b) whose most recent course of PBS-subsidised biological treatment for this condition in this Treatment Cycle was with etanercept; and*
- (c) who have demonstrated an adequate response to treatment with etanercept.*

*An adequate response to etanercept treatment is defined as the plaque or plaques assessed prior to biological treatment showing:*

- (i) a reduction in the Psoriasis Area and Severity Index (PASI) symptom subscores for all 3 of erythema, thickness and scaling, to slight or better, or sustained at this level, as compared to the pre-biological treatment baseline values; or*
- (ii) a reduction by 75% or more in the skin area affected, or sustained at this level, as compared to the pre-biological treatment baseline value.*

*This assessment must be made after 12 weeks of etanercept treatment and must be provided to Medicare Australia no later than 4 weeks from the cessation of that treatment course.*

*Applications for authorisation must be made in writing and must include:*

- (a) a completed authority prescription form; and*
- (b) a completed Severe Chronic Plaque Psoriasis PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))] which includes the following:*
  - (i) the completed Psoriasis Area and Severity Index (PASI) calculation sheet and face, hand, foot area diagrams along with the date of the assessment of the patient's condition [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))].*

*A maximum of 12 weeks of treatment with etanercept will be authorised under this restriction.*

| <p><i>Where fewer than 2 repeats are requested at the time of the authority application, authority approvals for sufficient repeats to complete a maximum of 12 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday). Under no circumstances will telephone approvals be granted for continuing authority applications, or for treatment that would otherwise extend the treatment period beyond 12 weeks.</i></p> <p><i>A PASI assessment of the patient's response must be made at the completion of each 12 week active treatment course. This assessment must be submitted to Medicare Australia no later than 1 month from the date of completion of this course of treatment. Where a response assessment is not undertaken and submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with etanercept. In circumstances where it is not possible to submit a response assessment within these timeframes, please call Medicare Australia on 1800 700 270 to discuss.</i></p> <p><i>Patients who demonstrate a response to treatment according to the response criterion included in this restriction, may access further continuing treatment with etanercept, following a biological treatment-free period of at least 12 weeks.</i></p> <p><i>Continuing treatment is available in the form of 12 weeks of active etanercept treatment followed by a biological treatment-free period of at least 12 weeks. Patients are eligible to receive continuing treatment with etanercept on this cyclical basis, for as long as they continue to sustain a response. Continuing applications can only be submitted at least 12 weeks after cessation of the most recent course of etanercept treatment.</i></p> <p><i>Patients who fail to demonstrate such a response to etanercept treatment and who qualify to trial an alternate biological agent according to the interchangeability arrangements for biological agents for the treatment of severe chronic plaque psoriasis, may do so without having to have a 12 week treatment-free period.</i></p> <p><i>The PASI assessment for continuing treatment must be performed on the same affected area assessed at baseline.</i></p> <p><i>Patients who fail to demonstrate a response to treatment with each of the biological agents, efalizumab, etanercept and infliximab, are deemed to have completed this Treatment Cycle and must cease PBS-subsidised therapy. These patients may re-commence a new Biological Treatment Cycle after a minimum of 5 years has elapsed between the date the last prescription for a PBS-subsidised biological agent was approved in this Cycle and the date of the first application under the new Cycle.</i></p> |                                                                                                    |             |                |         |                                          |                                                        |                                      |    |

*Further prescribing information is on the Medicare Australia website at [www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au).*

### NOTE:

#### **TREATMENT OF ADULT PATIENTS WITH SEVERE ACTIVE RHEUMATOID ARTHRITIS**

*The following information applies to the prescribing under the Pharmaceutical Benefits Scheme (PBS) of the biological disease modifying anti-rheumatic drugs (bDMARDs) for adults with severe active rheumatoid arthritis. Where the term bDMARD appears in the following notes and restrictions it refers to the tumour necrosis factor (TNF) alfa antagonists (adalimumab, etanercept, infliximab), the chimeric anti-CD20 monoclonal antibody (rituximab), the interleukin-1 inhibitor (anakinra) and the T-cell co-stimulation modulator (abatacept).*

*Patients are eligible for PBS-subsidised treatment with only 1 of the above biological disease modifying anti-rheumatic drugs at any 1 time.*

*PBS-subsidised infliximab, anakinra, rituximab and abatacept must be used in combination with methotrexate at a dose of at least 7.5 mg weekly. Where a patient cannot tolerate 7.5 mg of methotrexate weekly, they are only eligible to receive PBS-subsidised etanercept and adalimumab.*

*In order to be eligible to receive PBS-subsidised treatment with rituximab, a patient must have already failed to demonstrate a response to at least 1 course of treatment with a PBS-subsidised TNF-alfa antagonist.*

*From 1 March 2008, under the PBS, all patients will be able to commence a Treatment Cycle where they may trial PBS-subsidised bDMARD agents without having to experience a disease flare when swapping to an alternate agent. Under these interchangeability arrangements, within a single Treatment Cycle, a patient may continue to receive long-term treatment with a bDMARD while they continue to show a response to therapy.*

*A patient who received PBS-subsidised bDMARD treatment prior to 1 March 2008 is considered to be in their first Cycle as of 1 March 2008.*

*Within the same Treatment Cycle, a patient cannot trial and fail, or cease to respond to, the same PBS-subsidised bDMARD more than once.*

*Once a patient has either failed or ceased to respond to treatment 3 times, they are deemed to have completed a Treatment Cycle and they must have, at a minimum, a 5-year break in PBS-subsidised bDMARD therapy before they are eligible to commence the next Cycle.*

*For patients who have failed PBS-subsidised treatment with 3 bDMARDs prior to 1 March 2008 please contact Medicare Australia on 1800 700 270.*

*The 5-year break is measured from the date of the last approval for PBS-subsidised bDMARD treatment in the most recent Cycle to the date of the first application for initial treatment with a bDMARD under the new Treatment Cycle.*

*A patient who has failed fewer than 3 bDMARDs in a Treatment Cycle and who has a break in therapy of less than 5 years, may commence a further course of treatment within the same Treatment Cycle.*

*A patient who has failed fewer than 3 bDMARDs in a Treatment Cycle and who has a break in therapy of more than 5 years, may commence a new Treatment Cycle.*

*There is no limit to the number of Treatment Cycles a patient may undertake in their lifetime.*

*If patients fail to respond to a particular bDMARD within a single Treatment Cycle, they are not eligible to receive further PBS-subsidised treatment with that drug until they commence the next Cycle.*

*(1) How to prescribe PBS-subsidised bDMARD therapy after 1 March 2008.*

## ANTINEOPLASTIC AND IMMUNOMODULATING AGENTS—CONT.

| Code | Name, Restriction,<br>Manner of Administration and Form | Max.<br>Qty | No. of<br>Rpts | Premium | Dispensed                   | Maximum                                     | Proprietary Name and<br>Manufacturer |
|------|---------------------------------------------------------|-------------|----------------|---------|-----------------------------|---------------------------------------------|--------------------------------------|
|      |                                                         |             |                |         | Price for<br>Max. Qty<br>\$ | Recordable<br>Value for<br>Safety Net<br>\$ |                                      |

### (a) Initial treatment.

*Applications for initial treatment should be made where:*

- (i) a patient has received no prior PBS-subsidised bDMARD treatment in this Treatment Cycle and wishes to commence such therapy, excluding rituximab (Initial 1); or
- (ii) a patient has received prior PBS-subsidised (initial or continuing) bDMARD therapy and wishes to trial an alternate agent (Initial 2) [further details are under 'Swapping therapy' below]; or
- (iii) a patient wishes to re-commence treatment with a specific bDMARD following a break in PBS-subsidised therapy with that agent (Initial 2).

*Initial treatment authorisations will be limited to provide a maximum of 16 weeks of therapy for etanercept, adalimumab, anakinra and abatacept, 22 weeks of therapy for infliximab and 2 infusions of rituximab.*

*From 1 March 2008, a patient must be assessed for response to any course of initial PBS-subsidised treatment (excluding rituximab) following a minimum of 12 weeks of therapy and this assessment must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased.*

*Rituximab patients must be assessed following a minimum of 12 weeks after the first infusion, and this assessment must be submitted to Medicare Australia within 4 weeks.*

*Where a response assessment is not submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with that bDMARD.*

*For second and subsequent courses of PBS-subsidised bDMARD (excluding rituximab) treatment it is recommended that a patient is reviewed in the month prior to completing their current course of treatment and that an application is submitted to Medicare Australia no later than 2 weeks prior to the patient completing their current treatment course.*

#### *Rituximab patients:*

*A further application may be submitted to Medicare Australia 24 weeks after the first infusion. New baselines may be submitted with this application if appropriate.*

### (b) Continuing treatment.

*Following the completion of an initial treatment course with a specific bDMARD (excluding rituximab), a patient may qualify to receive up to 24 weeks of continuing treatment with that drug providing they have demonstrated an adequate response to treatment. The patient remains eligible to receive continuing bDMARD treatment with the same drug in courses of up to 24 weeks providing they continue to sustain the response.*

*It is recommended that a patient be reviewed in the month prior to completing their current course of treatment to ensure uninterrupted bDMARD supply.*

*Assessments of response to a course of PBS-subsidised therapy must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased.*

#### *Rituximab patients:*

*A patient may qualify to receive a further course of treatment (every 24 weeks) with this agent providing they have demonstrated an adequate response to treatment following a minimum of 12 weeks after the first infusion of their most recent treatment with rituximab. The patient remains eligible to receive a course of rituximab every 24 weeks providing they continue to demonstrate a response as specified in the restriction.*

*Where a response assessment is not submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with that bDMARD.*

### (2) Swapping therapy.

*Once initial treatment with the first PBS-subsidised bDMARD is approved, a patient may swap to an alternate bDMARD within the same Treatment Cycle without having to requalify with respect to the indices of disease severity (i.e. the erythrocyte sedimentation rate (ESR), the C-reactive protein (CRP) levels and the joint count) or the prior non-bDMARD therapy requirements. However the requirement for concomitant treatment with methotrexate, where it applies, must be met for each bDMARD trialled.*

## ANTINEOPLASTIC AND IMMUNOMODULATING AGENTS—CONT.

| Code | Name, Restriction,<br>Manner of Administration and Form | Max.<br>Qty | No. of<br>Rpts | Premium | Dispensed                   | Maximum                                     | Proprietary Name and<br>Manufacturer |
|------|---------------------------------------------------------|-------------|----------------|---------|-----------------------------|---------------------------------------------|--------------------------------------|
|      |                                                         |             |                |         | Price for<br>Max. Qty<br>\$ | Recordable<br>Value for<br>Safety Net<br>\$ |                                      |

*Patients who are not able to complete a minimum of 12 weeks of an initial treatment course will be deemed to have failed treatment with that agent.*

*A patient may trial an alternate bDMARD at any time, regardless of whether they are receiving therapy (initial or continuing) with a bDMARD at the time of the application. However, they cannot swap to a particular bDMARD if they have failed to respond to prior treatment with that drug within the same Treatment Cycle.*

*In order to trial rituximab, a patient must have trialled and failed to demonstrate a response to at least 1 PBS-subsidised TNF- $\alpha$  antagonist treatment.*

*To ensure a patient receives the maximum treatment opportunities allowed under the interchangeability arrangements, it is important that they are assessed for response to every course of treatment approved, within the timeframes specified in the relevant restriction.*

*PBS subsidy does not allow for patients to receive treatment with another PBS-subsidised biological agent during the required treatment-free period applying to patients who have demonstrated a response to their most recent course of rituximab. This means that patients who have demonstrated a response to a course of rituximab must have a PBS-subsidised biological therapy treatment-free period of at least 22 weeks, immediately following the second infusion, before swapping to an alternate bDMARD. Patients who fail to respond to rituximab and who qualify and wish to trial a course of an alternate bDMARD may do so without having to have any treatment-free period.*

*To avoid confusion, an application for a patient who wishes to swap to an alternate bDMARD should be accompanied by the approved authority prescription or remaining repeats for the bDMARD the patient is ceasing.*

### **NOTE:**

*(3) Baseline measurements to determine response.*

*Medicare Australia will determine whether a response to treatment has been demonstrated based on the baseline measurements of the joint count, ESR and/or CRP submitted with the first authority application for a bDMARD. However, prescribers may provide new baseline measurements any time that an initial treatment authority application is submitted within a Treatment Cycle and Medicare Australia will assess response according to these revised baseline measurements.*

*To ensure consistency in determining response, the same indices of disease severity used to establish baseline at the commencement of treatment with each initial treatment application must be provided for all subsequent continuing treatment applications. Therefore, where only an ESR or CRP level is provided at baseline, an ESR or CRP level respectively must be provided to determine response. Similarly, where the baseline active joint count is based on total active joints (i.e. more than 20 active joints), response will be determined according to the reduction in the total number of active joints. Where the baseline is determined on total number of major joints, the response must be demonstrated on the total number of major joints.*

*The baseline joint and blood counts should be performed whilst the patient is still on treatment or within 1 month of ceasing prior treatment.*

*(4) Re-commencement of treatment after a 5-year break in PBS-subsidised therapy.*

*A patient who wishes to trial a second or subsequent Treatment Cycle following a break in PBS-subsidised bDMARD therapy of at least 5 years, must requalify for initial treatment with respect to the indices of disease severity. Patients must have received treatment with at least 1 non-biological DMARD, at an adequate dose, for a minimum of 3 months at the time the ESR and/or CRP levels and the active joint count are measured.*

*(5) Patients 'grandfathered' onto PBS-subsidised treatment with rituximab or abatacept.*

*From 1 March 2008, a patient who commenced treatment with rituximab for severe rheumatoid arthritis prior to 7 March 2007 or abatacept for severe rheumatoid arthritis prior to 1 November 2007 and who was 'grandfathered' on to PBS-subsidised therapy, and who continues to receive treatment in the same Treatment Cycle, will have further applications for treatment with rituximab or abatacept assessed under the continuing treatment restriction.*

## ANTINEOPLASTIC AND IMMUNOMODULATING AGENTS—CONT.

| Code | Name, Restriction,<br>Manner of Administration and Form | Max.<br>Qty | No. of<br>Rpts | Premium | Dispensed                   | Maximum                                     | Proprietary Name and<br>Manufacturer |
|------|---------------------------------------------------------|-------------|----------------|---------|-----------------------------|---------------------------------------------|--------------------------------------|
|      |                                                         |             |                |         | Price for<br>Max. Qty<br>\$ | Recordable<br>Value for<br>Safety Net<br>\$ |                                      |

*A patient may only qualify for PBS-subsidised treatment under this criterion once. A maximum of 24 weeks of treatment with abatacept will be authorised under this criterion.*

*'Grandfather' arrangements will only apply for the first Treatment Cycle. For the second and subsequent Cycles, a 'grandfather' patient must requalify for initial treatment under the criteria that applies to a new patient. See 'Re-commencement of treatment after a 5-year break in PBS-subsidised therapy' above for further details.*

### **Authority Required**

#### *Initial 1 (new patients)*

*Application for initial PBS-subsidised treatment with anakinra, in combination with methotrexate at a dose of at least 7.5 mg weekly, by a rheumatologist or clinical immunologist with expertise in the management of rheumatoid arthritis, of adults who:*

- (a) have severe active rheumatoid arthritis; and*
- (b) have received no prior PBS-subsidised treatment with a bDMARD for this condition in this treatment cycle; and*
- (c) have failed to achieve an adequate response to the following treatments:*
  - (i) methotrexate at a dose of at least 20 mg weekly; and*
  - (ii) methotrexate (at a minimum dose of 7.5 mg weekly), in combination with 2 other non-biological disease modifying anti-rheumatic drugs (DMARDs), for a minimum of 3 months; and*
  - (iii) a minimum of 3 months' treatment with:*
    - leflunomide alone; or*
    - leflunomide in combination with methotrexate; or*
    - cyclosporin.*

*If treatment with any of the above-mentioned drugs is contraindicated according to the relevant TGA-approved Product Information, please provide details at the time of application.*

*If intolerance to treatment develops during the relevant period of use, which is of a severity necessitating permanent treatment withdrawal, please provide details of the degree of this toxicity at the time of application.*

*Details of the accepted toxicities, including severity, can be found on the Medicare Australia website [www.medicareaustralia.gov.au].*

*The following initiation criteria indicate failure to achieve an adequate response and must be demonstrated in all patients at the time of the initial application:*

*an elevated erythrocyte sedimentation rate (ESR) greater than 25 mm per hour or a C-reactive protein (CRP) level greater than 15 mg per L;*

*AND either*

- (i) a total active joint count of at least 20 active (swollen and tender) joints; or*
- (ii) at least 4 active joints from the following list of major joints:*
  - elbow, wrist, knee and/or ankle (assessed as swollen and tender); and/or*
  - shoulder and/or hip (assessed as pain in passive movement and restriction of passive movement, where pain and limitation of movement are due to active disease and not irreversible damage such as joint destruction or bony overgrowth).*

*All tests and assessments should be performed preferably whilst still on treatment, but no longer than 1 month following cessation of the most recent prior treatment.*

*If the above requirement to demonstrate an elevated ESR or CRP cannot be met, the application must state the reasons why this criterion cannot be satisfied.*

## ANTINEOPLASTIC AND IMMUNOMODULATING AGENTS—CONT.

| Code | Name, Restriction,<br>Manner of Administration and Form | Max.<br>Qty | No. of<br>Rpts | Premium | Dispensed                   | Maximum                                     | Proprietary Name and<br>Manufacturer |
|------|---------------------------------------------------------|-------------|----------------|---------|-----------------------------|---------------------------------------------|--------------------------------------|
|      |                                                         |             |                |         | Price for<br>Max. Qty<br>\$ | Recordable<br>Value for<br>Safety Net<br>\$ |                                      |

*The authority application must be made in writing and must include:*

- (1) a completed authority prescription form; and
- (2) a completed Rheumatoid Arthritis PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))] which includes details of the patient's ESR and CRP measurements and the patient's active joint count which must have been assessed no earlier than 1 month prior to the date of application; and
- (3) a signed patient acknowledgement.

*A maximum of 16 weeks of treatment will be authorised under this restriction.*

*Where fewer than 3 repeats are requested at the time of the initial application, authority approvals for sufficient repeats to complete a maximum of 16 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

*Assessment of a patient's response to an initial course of treatment must be made after at least 12 weeks of treatment so that there is adequate time for a response to be demonstrated. This assessment, which will be used to determine eligibility for continuing treatment, must be submitted to Medicare Australia no later than 1 month from the date of completion of this initial course of treatment. Where a response assessment is not undertaken and submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with anakinra.*

*Patients who fail to demonstrate a response to treatment with anakinra under this restriction will not be eligible to receive further PBS-subsidised treatment with this drug, in this treatment cycle. Patients may re-trial anakinra after a minimum of 5 years have elapsed between the date the last prescription for a PBS-subsidised bDMARD was approved in this cycle and the date of the first application under the new cycle.*

### **Authority Required**

*Initial 2 (change or re-commencement)*

*Application for an initial course of PBS-subsidised treatment with anakinra, in combination with methotrexate at a dose of at least 7.5 mg weekly, by a rheumatologist or clinical immunologist with expertise in the management of rheumatoid arthritis, of adults who:*

- (a) have a documented history of severe active rheumatoid arthritis; and
- (b) have received prior PBS-subsidised bDMARD treatment for this condition in this treatment cycle and are eligible to receive further bDMARD therapy.

*The authority application must be made in writing and must include:*

- (1) a completed authority prescription form; and
- (2) a completed Rheumatoid Arthritis PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))].

*Applications for patients who have received PBS-subsidised treatment with anakinra within this treatment cycle and who wish to re-commence therapy with this drug within this same cycle, must be accompanied by evidence of a response to the patient's most recent course of PBS-subsidised anakinra treatment, within the timeframes specified below.*

*A maximum of 16 weeks of treatment will be authorised under this restriction.*

*Where fewer than 3 repeats are requested at the time of the initial application, authority approvals for sufficient repeats to complete a maximum of 16 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

*Where the most recent course of PBS-subsidised anakinra treatment was approved under either of the initial treatment restrictions (i.e. for patients with no prior PBS-subsidised bDMARD therapy or, under this restriction, for patients who have received previous PBS-subsidised bDMARD therapy), patients must have been assessed for response following a minimum of 12 weeks of therapy. This assessment must be provided to Medicare Australia no later than 4 weeks from the date that course was ceased.*

*Where the most recent course of PBS-subsidised anakinra treatment was approved under the continuing treatment criteria, patients must have been assessed for response, and the assessment must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased.*

*Patients who fail to demonstrate a response to treatment with anakinra under this restriction will not be eligible to receive further PBS-subsidised treatment with this drug, in this treatment cycle. Patients may re-trial anakinra after a minimum of 5 years have elapsed between the date the last prescription for a PBS-subsidised bDMARD was approved in this cycle and the date of the first application under the new cycle.*

### NOTE:

*No applications for increased maximum quantities and/or repeats will be authorised.*

### Authority Required

#### Continuing treatment

*Continuing PBS-subsidised treatment with anakinra, in combination with methotrexate at a dose of at least 7.5 mg weekly, by a rheumatologist or clinical immunologist with expertise in the management of rheumatoid arthritis, of adults:*

- (a) who have a documented history of severe active rheumatoid arthritis; and*
- (b) who have demonstrated an adequate response to treatment with anakinra; and*
- (c) whose most recent course of PBS-subsidised bDMARD treatment in this treatment cycle was with anakinra.*

*An adequate response to treatment is defined as:*

*an ESR no greater than 25 mm per hour or a CRP level no greater than 15 mg per L or either marker reduced by at least 20% from baseline;*

*AND either of the following:*

- (i) a reduction in the total active (swollen and tender) joint count by at least 50% from baseline, where baseline is at least 20 active joints; or*
- (ii) a reduction in the number of the following major active joints, from at least 4, by at least 50%:*
  - elbow, wrist, knee and/or ankle (assessed as swollen and tender); and/or*
  - shoulder and/or hip (assessed as pain in passive movement and restriction of passive movement, where pain and limitation of movement are due to active disease and not irreversible damage such as joint destruction or bony overgrowth).*

*The authority application must be made in writing and must include:*

- (1) a completed authority prescription form; and*
- (2) a completed Rheumatoid Arthritis PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))].*

*A maximum of 24 weeks of treatment will be approved under this restriction.*

*Where fewer than 5 repeats are requested at the time of the application, authority approvals for sufficient repeats to complete a maximum of 24 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

*All applications for continuing treatment with anakinra must include a measurement of response to the prior course of therapy. This assessment must be provided to Medicare Australia no later than 4 weeks from the cessation of that treatment course. If the application is the first application for continuing treatment with anakinra, it must be accompanied by an assessment of response to a minimum of 12 weeks of treatment with an initial treatment course.*

No applications for increased maximum quantities and/or repeats will be authorised.

• **Calcineurin inhibitors**

**CYCLOSPORIN**

**CAUTION:**

Careful monitoring of patients is mandatory.

**Authority Required**

Maintenance therapy, following initiation and stabilisation of treatment with cyclosporin, of:

- (a) patients with organ or tissue transplants. Therapy must remain under the supervision and direction of the transplant unit reviewing the patient. The name of the specialised transplant unit reviewing treatment and the date of the latest review at the specialised transplant unit must be included in the authority application; or
- (b) patients with severe atopic dermatitis for whom other systemic therapies are ineffective or inappropriate. Therapy must remain under the supervision and direction of a dermatologist, clinical immunologist or specialised unit reviewing treatment and the date of the latest review must be included in the authority application; or
- (c) patients with severe psoriasis for whom other systemic therapies are ineffective or inappropriate and in whom the disease has caused significant interference with quality of life. Therapy must remain under the supervision and direction of a dermatologist or specialised unit reviewing the patient. The name of the dermatologist or specialised unit reviewing treatment and the date of the latest review must be included in the authority application; or
- (d) patients with nephrotic syndrome in whom steroids and cytostatic drugs have failed or are not tolerated or are considered inappropriate and in whom renal function is unimpaired. Therapy must remain under the supervision and direction of a nephrologist or specialised unit reviewing the patient. The name of the nephrologist or specialised unit reviewing treatment and the date of the latest review must be included in the authority application; or
- (e) patients with severe active rheumatoid arthritis for whom classical slow-acting anti-rheumatic agents (including methotrexate) are ineffective or inappropriate. Therapy must remain under the supervision and direction of a rheumatologist, clinical immunologist or specialised unit reviewing treatment and the date of the latest review must be included in the authority application;

Management (which includes initiation, stabilisation and review of therapy) by:

- (a) dermatologists or clinical immunologists of patients with severe atopic dermatitis for whom other systemic therapies are ineffective or inappropriate; or
- (b) dermatologists of patients with severe psoriasis for whom other systemic therapies are ineffective or inappropriate and in whom the disease has caused significant interference with quality of life; or
- (c) rheumatologists or clinical immunologists of patients with severe active rheumatoid arthritis for whom classical slow-acting anti-rheumatic agents (including methotrexate) are ineffective or inappropriate.

## TACROLIMUS

### CAUTION:

Careful monitoring of patients is mandatory.

### Authority Required

Maintenance therapy, following initiation and stabilisation of treatment with tacrolimus and where therapy remains under the supervision and direction of the transplant unit reviewing that patient, of patients with:

- (a) liver transplants. The name of the specialised transplant unit reviewing treatment and the date of the latest review at the specialised transplant unit must be included in the authority application; or
- (b) renal transplants. The name of the specialised transplant unit reviewing treatment and the date of the latest review at the specialised transplant unit must be included in the authority application; or
- (c) cardiac transplants. The name of the specialised transplant unit reviewing treatment and the date of the latest review at the specialised transplant unit must be included in the authority application; or
- (d) lung transplants. The name of the specialised transplant unit reviewing treatment and the date of the latest review at the specialised transplant unit must be included in the authority application.

### RISEDRONATE SODIUM

#### Authority Required (STREAMLINED)

2645

*Treatment as the sole PBS-subsidised anti-resorptive agent for osteoporosis in a patient aged 70 years of age or older with a Bone Mineral Density (BMD) T-score of -3.0 or less.*

*The date, site (femoral neck or lumbar spine) and score of the qualifying BMD measurement must be documented in the patient's medical records when treatment is initiated.*

#### Authority Required (STREAMLINED)

2646

*Treatment as the sole PBS-subsidised anti-resorptive agent for established osteoporosis in patients with fracture due to minimal trauma. The fracture must have been demonstrated radiologically and the year of plain x-ray or CT-scan or MRI scan must be documented in the patient's medical records when treatment is initiated.*

*A vertebral fracture is defined as a 20% or greater reduction in height of the anterior or mid portion of a vertebral body relative to the posterior height of that body, or, a 20% or greater reduction in any of these heights compared to the vertebral body above or below the affected vertebral body.*

#### NOTE:

*Anti-resorptive agents in established osteoporosis include alendronate sodium, risedronate sodium, disodium etidronate, raloxifene hydrochloride and strontium ranelate.*

### RALOXIFENE HYDROCHLORIDE

#### **Authority Required (STREAMLINED)**

2647

*Treatment as the sole PBS-subsidised anti-resorptive agent for established post-menopausal osteoporosis in patients with fracture due to minimal trauma. The fracture must have been demonstrated radiologically and the year of plain x-ray or CT-scan or MRI scan must be documented in the patient's medical records when treatment is initiated.*

*A vertebral fracture is defined as a 20% or greater reduction in height of the anterior or mid portion of a vertebral body relative to the posterior height of that body, or, a 20% or greater reduction in any of these heights compared to the vertebral body above or below the affected vertebral body.*

#### **NOTE:**

*Anti-resorptive agents in established osteoporosis include alendronate sodium, risedronate sodium, disodium etidronate, raloxifene hydrochloride and strontium ranelate.*

### MORPHINE HYDROCHLORIDE

#### CAUTION:

*The risk of drug dependence is high.*

#### Restricted Benefit

*Severe disabling pain not responding to non-narcotic analgesics.*

#### NOTE:

*Authorities for increased maximum quantities and/or repeats will be granted only for:*

*(i) severe disabling pain associated with proven malignant neoplasia; or*

*(ii) chronic severe disabling pain not responding to non-narcotic analgesics where the total duration of narcotic analgesic treatment is less than 12 months; or*

*(iii) first application for treatment beyond 12 months of chronic severe disabling pain not responding to non-narcotic analgesics where the patient's pain management has been reviewed through consultation by the patient with another medical practitioner, and the clinical need for continuing narcotic analgesic treatment has been confirmed. The date of the consultation must be no more than 3 months prior to the application for a PBS authority. The full name of the medical practitioner consulted and the date of consultation are to be provided at the time of application; or*

*(iv) subsequent application for treatment of chronic severe disabling pain not responding to non-narcotic analgesics where a PBS authority prescription for treatment beyond 12 months has previously been issued for this patient.*

### CAUTION:

*The risk of drug dependence is high.*

### Restricted Benefit

*Severe disabling pain not responding to non-narcotic analgesics.*

### NOTE:

*Authorities for increased maximum quantities and/or repeats will be granted only for:*

*(i) severe disabling pain associated with proven malignant neoplasia; or*

*(ii) chronic severe disabling pain not responding to non-narcotic analgesics where the total duration of narcotic analgesic treatment is less than 12 months; or*

*(iii) first application for treatment beyond 12 months of chronic severe disabling pain not responding to non-narcotic analgesics where the patient's pain management has been reviewed through consultation by the patient with another medical practitioner, and the clinical need for continuing narcotic analgesic treatment has been confirmed. The date of the consultation must be no more than 3 months prior to the application for a PBS authority. The full name of the medical practitioner consulted and the date of consultation are to be provided at the time of application; or*

*(iv) subsequent application for treatment of chronic severe disabling pain not responding to non-narcotic analgesics where a PBS authority prescription for treatment beyond 12 months has previously been issued for this patient.*

**Restricted Benefit***Chronic severe disabling pain not responding to non-narcotic analgesics.***NOTE:***Authorities for increased maximum quantities and/or repeats will be granted only for:**(i) chronic severe disabling pain associated with proven malignant neoplasia; or**(ii) chronic severe disabling pain not responding to non-narcotic analgesics where the total duration of narcotic analgesic treatment is less than 12 months; or**(iii) first application for treatment beyond 12 months of chronic severe disabling pain not responding to non-narcotic analgesics where the patient's pain management has been reviewed through consultation by the patient with another medical practitioner, and the clinical need for continuing narcotic analgesic treatment has been confirmed. The date of the consultation must be no more than 3 months prior to the application for a PBS authority. The full name of the medical practitioner consulted and the date of consultation are to be provided at the time of application; or**(iv) subsequent application for treatment of chronic severe disabling pain not responding to non-narcotic analgesics where a PBS authority prescription for treatment beyond 12 months has previously been issued for this patient.*

### • Phenylpiperidine derivatives

#### FENTANYL

#### CAUTION:

The risk of drug dependence is high.

#### Restricted Benefit

Chronic severe disabling pain not responding to non-narcotic analgesics.

#### NOTE:

Authorities for increased maximum quantities and/or repeats will be granted only for:

(i) chronic severe disabling pain associated with proven malignant neoplasia; or

(ii) chronic severe disabling pain not responding to non-narcotic analgesics where the total duration of narcotic analgesic treatment is less than 12 months; or

(iii) first application for treatment beyond 12 months of chronic severe disabling pain not responding to non-narcotic analgesics where the patient's pain management has been reviewed through consultation by the patient with another medical practitioner, and the clinical need for continuing narcotic analgesic treatment has been confirmed. The date of the consultation must be no more than 3 months prior to the application for a PBS authority. The full name of the medical practitioner consulted and the date of consultation are to be provided at the time of application; or

(iv) subsequent application for treatment of chronic severe disabling pain not responding to non-narcotic analgesics where a PBS authority prescription for treatment beyond 12 months has previously been issued for this patient.

• **Oripavine derivatives**

**BUPRENORPHINE**

**CAUTION:**

*The risk of drug dependence is high.*

**Restricted Benefit**

*Chronic severe disabling pain not responding to non-narcotic analgesics.*

**NOTE:**

*Authorities for increased maximum quantities and/or repeats will be granted only for:*

*(i) chronic severe disabling pain associated with proven malignant neoplasia; or*

*(ii) chronic severe disabling pain not responding to non-narcotic analgesics where the total duration of narcotic analgesic treatment is less than 12 months; or*

### Authority Required (STREAMLINED)

2598

*Treatment under the supervision of a paediatrician or psychiatrist, in combination with non-pharmacological measures, of severe behavioural disturbances in a child or adolescent aged less than 18 years with autism. Behaviour disturbances are defined as severe aggression and injuries to self or others where non-pharmacological methods alone have been unsuccessful.*

*The diagnosis of autism must be made based on the Diagnostic and Statistical Manual of Mental Disorders, Fourth Edition (DSM-IV) or ICD-10 international classification of mental and behavioural disorders.*

### Psychostimulants, agents used for ADHD and nootropics

#### • Centrally acting sympathomimetics

##### ATOMOXETINE HYDROCHLORIDE

##### Authority Required

*Initial treatment of attention-deficit hyperactivity disorder (ADHD) diagnosed between the ages of 6 and 18 years inclusive, by a paediatrician or psychiatrist according to the DSM-IV criteria, where:*

- (a) *treatment with dexamphetamine sulfate or methylphenidate hydrochloride poses an unacceptable medical risk due to the following contraindications as specified in the TGA-approved product information:*
  - (1) *The patient has a history of substance abuse or misuse (other than alcohol); and/or*
  - (2) *The patient has comorbid motor tics or Tourette's Syndrome; and/or*
  - (3) *The patient has comorbid severe anxiety diagnosed according to the DSM-IV; or*
- (b) *treatment with dexamphetamine sulfate or methylphenidate hydrochloride has resulted in the development or worsening of a comorbid mood disorder (diagnosed according to the DSM-IV criteria i.e. anxiety disorder, obsessive compulsive disorder, depressive disorder) of a severity necessitating permanent stimulant treatment withdrawal; or where the combination of stimulant treatment with another agent would pose an unacceptable medical risk of a severity necessitating permanent stimulant treatment withdrawal; or*
- (c) *treatment with dexamphetamine sulfate AND methylphenidate hydrochloride has resulted in the development of adverse reactions of a severity necessitating permanent treatment withdrawal:*
  - (1) *Adverse effects on growth and weight; and/or*
  - (2) *Adverse effects on sleep including insomnia; and/or*
  - (3) *Adverse effects on appetite including anorexia.*

##### Authority Required

*Continuing treatment where the patient has previously been issued with an authority prescription for this drug.*

### Anti-dementia drugs

#### • Anticholinesterases

##### **DONEPEZIL HYDROCHLORIDE**

#### Authority Required

**INITIAL APPLICATION FOR THE TREATMENT OF MILD TO MODERATELY SEVERE ALZHEIMER'S DISEASE** — Patients with an (S)MMSE of 10 or more.

Initial treatment, as the sole PBS-subsidised therapy, of mild to moderately severe Alzheimer's disease. Confirmation of this diagnosis must be made by a specialist/consultant physician (including a psychiatrist).

The authority application must include the result of the baseline Mini-Mental State Examination (MMSE) or Standardised Mini-Mental State Examination (SMMSE). This baseline (S)MMSE must be a score of 10 or more. If this score is 25 - 30 points, the result of a baseline Alzheimer's Disease Assessment Scale, cognitive sub-scale (ADAS-Cog) may also be specified.

If an ADAS-Cog score is not supplied with the initial application, this scale cannot be used for the purpose of fulfilling the criteria for continued PBS supply.

This application must be made in writing, but initial supply may be sought by telephone.

For telephone applications, up to a maximum of 2 months' initial therapy will be authorised. This telephone application must be followed by a written authority application for no more than 1 month's therapy and sufficient repeats to complete a maximum of up to 6 months' initial treatment.

For written applications where no prior telephone approval has been issued, up to a maximum of 1 month's therapy plus 5 repeats will be authorised;

**CONTINUING TREATMENT** — (S)MMSE or ADAS-Cog improvement.

Continuing treatment, as the sole PBS-subsidised therapy, following initial PBS-subsidised therapy, of mild to moderately severe Alzheimer's disease in patients with demonstrated improvement in cognitive function as measured by:

(a) for patients with a baseline (S)MMSE score of 10 or more and less than 25, an increase of at least 2 points from baseline on the Mini-Mental State Examination (MMSE) or Standardised Mini-Mental State Examination (SMMSE);

(b) for patients with a baseline (S)MMSE score of at least 25 points, a decrease of at least 4 points from baseline on the Alzheimer's Disease Assessment Scale, cognitive sub-scale (ADAS-Cog) or an increase of at least 2 points from baseline on the Mini-Mental State Examination (MMSE) or Standardised Mini-Mental State Examination (SMMSE).

The initial authority application for continuing treatment must include the relevant result from the (S)MMSE or the ADAS-Cog and must be in writing.

Subsequent applications for continuing treatment can be made by telephone.

#### Authority Required

**INITIAL APPLICATION FOR THE TREATMENT OF MILD TO MODERATELY SEVERE ALZHEIMER'S DISEASE** — Patients with an (S)MMSE of 9 or less who require a clinician's assessment.

Initial treatment, as the sole PBS-subsidised therapy, of mild to moderately severe Alzheimer's disease of patients with a baseline Mini-Mental State Examination (MMSE) or Standardised Mini-Mental State Examination (SMMSE) score of 9 or less, who are unable to register a score of 10 or more for reasons other than their Alzheimer's disease, as specified below. Confirmation of this diagnosis must be made by a specialist/consultant physician (including a psychiatrist).

Such patients will need to be assessed using the Clinicians Interview Based Impression of Severity (CIBIS) scale.

The authority application must include the result of the baseline (S)MMSE and specify to which group(s) (see below) the patient belongs.

### RIVASTIGMINE

#### Authority Required

**INITIAL APPLICATION FOR THE TREATMENT OF MILD TO MODERATELY SEVERE ALZHEIMER'S DISEASE** — Patients with an (S)MMSE of 10 or more.

*Initial treatment, as the sole PBS-subsidised therapy, of mild to moderately severe Alzheimer's disease. Confirmation of this diagnosis must be made by a specialist/consultant physician (including a psychiatrist).*

*The authority application must include the result of the baseline Mini-Mental State Examination (MMSE) or Standardised Mini-Mental State Examination (SMMSE). This baseline (S)MMSE must be a score of 10 or more. If this score is 25 - 30 points, the result of a baseline Alzheimer's Disease Assessment Scale, cognitive sub-scale (ADAS-Cog) may also be specified.*

*If an ADAS-Cog score is not supplied with the initial application, this scale cannot be used for the purpose of fulfilling the criteria for continued PBS supply.*

*This application must be made in writing, but initial supply may be sought by telephone.*

*For telephone applications, up to a maximum of 2 months' initial therapy will be authorised. This telephone application must be followed by a written authority application for no more than 1 month's therapy and sufficient repeats to complete a maximum of up to 6 months' initial treatment.*

*For written applications where no prior telephone approval has been issued, up to a maximum of 1 month's therapy plus 5 repeats will be authorised;*

**CONTINUING TREATMENT** — (S)MMSE or ADAS-Cog improvement.

*Continuing treatment, as the sole PBS-subsidised therapy, following initial PBS-subsidised therapy, of mild to moderately severe Alzheimer's disease in patients with demonstrated improvement in cognitive function as measured by:*

*(a) for patients with a baseline (S)MMSE score of 10 or more and less than 25, an increase of at least 2 points from baseline on the Mini-Mental State Examination (MMSE) or Standardised Mini-Mental State Examination (SMMSE);*

*(b) for patients with a baseline (S)MMSE score of at least 25 points, a decrease of at least 4 points from baseline on the Alzheimer's Disease Assessment Scale, cognitive sub-scale (ADAS-Cog) or an increase of at least 2 points from baseline on the Mini-Mental State Examination (MMSE) or Standardised Mini-Mental State Examination (SMMSE).*

*The initial authority application for continuing treatment must include the relevant result from the (S)MMSE or the ADAS-Cog and must be in writing.*

*Subsequent applications for continuing treatment can be made by telephone.*

### Authority Required

**INITIAL APPLICATION FOR THE TREATMENT OF MILD TO MODERATELY SEVERE ALZHEIMER'S DISEASE** — Patients with an (S)MMSE of 9 or less who require a clinician's assessment.

Initial treatment, as the sole PBS-subsidised therapy, of mild to moderately severe Alzheimer's disease of patients with a baseline Mini-Mental State Examination (MMSE) or Standardised Mini-Mental State Examination (SMMSE) score of 9 or less, who are unable to register a score of 10 or more for reasons other than their Alzheimer's disease, as specified below. Confirmation of this diagnosis must be made by a specialist/consultant physician (including a psychiatrist).

Such patients will need to be assessed using the Clinicians Interview Based Impression of Severity (CIBIS) scale. The authority application must include the result of the baseline (S)MMSE and specify to which group(s) (see below) the patient belongs.

This application must be made in writing, but initial supply may be sought by telephone.

For telephone applications, up to a maximum of 2 months' initial therapy will be authorised. This telephone application must be followed by a written authority application for no more than 1 month's therapy and sufficient repeats to complete a maximum of up to 6 months' initial treatment.

For written applications where no prior telephone approval has been issued, up to a maximum of 1 month's therapy plus 5 repeats will be authorised.

Patients who qualify under this criterion are from 1 or more of the following groups:

- (1) Unable to communicate adequately because of lack of competence in English, in people of non-English speaking background;
- (2) Limited education, as defined by less than 6 years of education, or who are illiterate or innumerate;
- (3) Aboriginal or Torres Strait Islanders who, by virtue of cultural factors, are unable to complete an (S)MMSE test;
- (4) Intellectual (developmental or acquired) disability, eg Down's syndrome;
- (5) Significant sensory impairment despite best correction, which precludes completion of an (S)MMSE test;
- (6) Prominent dysphasia, out of proportion to other cognitive and functional impairment;

**CONTINUING TREATMENT** — Clinician assessed improvement.

Continuing treatment, as the sole PBS-subsidised therapy, following initial PBS-subsidised therapy, of mild to moderately severe Alzheimer's disease in patients with demonstrated improvement in function, based on a rating of "very much improved" or "much improved" on the Clinicians Interview Based Impression of Change (CIBIC) scale, which must be assessed by the same clinician who initiated treatment.

The initial authority application for continuing treatment must state the improvement achieved on the CIBIC scale and must be in writing.

Subsequent applications for continuing treatment can be made by telephone.

**INITIAL APPLICATION FOR THE TREATMENT OF MODERATELY SEVERE ALZHEIMER'S DISEASE —**  
*Patients with an (S)MMSE of 10 to 14.*

*Initial treatment, as the sole PBS-subsidised therapy, of moderately severe Alzheimer's disease. Confirmation of this diagnosis must be made by a specialist/consultant physician (including a psychiatrist).*

*The authority application must include the result of the baseline Mini-Mental State Examination (MMSE) or Standardised Mini-Mental State Examination (SMMSE). This baseline (S)MMSE must be a score of 10 to 14.*

*This application must be made in writing, but initial supply may be sought by telephone.*

*For telephone applications, up to a maximum of 2 months' initial therapy will be authorised. This telephone application must be followed by a written authority application for no more than 1 month's therapy and sufficient repeats to complete a maximum of up to 6 months' initial treatment.*

*For written applications where no prior telephone approval has been issued, up to a maximum of 1 month's therapy plus 5 repeats will be authorised;*

**CONTINUING TREATMENT — (S)MMSE improvement.**

*Continuing treatment, as the sole PBS-subsidised therapy, following initial PBS-subsidised therapy, of moderately severe Alzheimer's disease in patients with demonstrated improvement in cognitive function as measured by an increase of at least 2 points from baseline on the Mini-Mental State Examination (MMSE) or Standardised Mini-Mental State Examination (SMMSE).*

*The initial authority application for continuing treatment must include the relevant result from the (S)MMSE and must be in writing.*

*Subsequent applications for continuing treatment can be made by telephone.*

### **Authority Required**

**INITIAL APPLICATION FOR THE TREATMENT OF MODERATELY SEVERE ALZHEIMER'S DISEASE —**

*Patients with an (S)MMSE of 9 or less who require a clinician's assessment.*

*Initial treatment, as the sole PBS-subsidised therapy, of moderately severe Alzheimer's disease of patients with a baseline Mini-Mental State Examination (MMSE) or Standardised Mini-Mental State Examination (SMMSE) score of 9 or less, who are unable to register a score of 10 to 14 for reasons other than their Alzheimer's disease, as specified below. Confirmation of this diagnosis must be made by a specialist/consultant physician (including a psychiatrist).*

*Such patients will need to be assessed using the Clinicians Interview Based Impression of Severity (CIBIS) scale.*

*The authority application must include the result of the baseline (S)MMSE and specify to which group(s) (see below) the patient belongs.*

*This application must be made in writing, but initial supply may be sought by telephone.*

*For telephone applications, up to a maximum of 2 months' initial therapy will be authorised. This telephone application must be followed by a written authority application for no more than 1 month's therapy and sufficient repeats to complete a maximum of up to 6 months' initial treatment.*

*For written applications where no prior telephone approval has been issued, up to a maximum of 1 month's therapy plus 5 repeats will be authorised.*

*Patients who qualify under this criterion are from 1 or more of the following groups:*

- (1) Unable to communicate adequately because of lack of competence in English, in people of non-English speaking background;*
- (2) Limited education, as defined by less than 6 years of education, or who are illiterate or innumerate;*
- (3) Aboriginal or Torres Strait Islanders who, by virtue of cultural factors, are unable to complete an (S)MMSE test;*
- (4) Intellectual (developmental or acquired) disability, eg Down's syndrome;*
- (5) Significant sensory impairment despite best correction, which precludes completion of an (S)MMSE test;*
- (6) Prominent dysphasia, out of proportion to other cognitive and functional impairment;*

**CONTINUING TREATMENT — Clinician assessed improvement.**

*Continuing treatment, as the sole PBS-subsidised therapy, following initial PBS-subsidised therapy, of moderately severe Alzheimer's disease in patients with demonstrated improvement in function, based on a rating of "very much improved" or "much improved" on the Clinicians Interview Based Impression of Change (CIBIC) scale, which must be assessed by the same clinician who initiated treatment.*

*The initial authority application for continuing treatment must state the improvement achieved on the CIBIC scale and must be in writing.*

### Drugs used in addictive disorders

#### • *Drugs used in nicotine dependence*

##### **BUPROPION HYDROCHLORIDE**

##### NOTE:

*Only one course of PBS-subsidised bupropion hydrochloride will be authorised per 12 months. The period between commencing a course of bupropion hydrochloride and varenicline tartrate must be at least 6 months. A course of treatment with bupropion hydrochloride is 9 weeks. No increased maximum quantities or repeats will be authorised. Clinical review is recommended within 2 to 3 weeks of the original prescription being requested.*

##### Authority Required

*Commencement of short-term, sole PBS-subsidised, therapy as an aid to achieving abstinence in a patient who has indicated they are ready to cease smoking and:*

- (a) who has entered a comprehensive support and counselling program; or*
- (b) who is entering a comprehensive support and counselling program during the consultation at which this authority is requested.*

*Details of the program must be specified in the authority application.*

### Other nervous system drugs

#### • Other nervous system drugs

##### **RILUZOLE**

##### Authority Required

*Initial treatment of amyotrophic lateral sclerosis, as diagnosed by a neurologist, in patients with disease duration of 5 years or less and who have at least 60 percent of predicted forced vital capacity within 2 months prior to commencing riluzole therapy and who:*

- (1) are ambulatory, and*
- (a) have not undergone tracheostomy, and*
- (b) have not experienced respiratory failure; OR*
- (2) are not ambulatory, and*
- (a) have not undergone tracheostomy, and*
- (b) have not experienced respiratory failure, and*
- (c) are either able to use upper limbs or able to swallow.*

*The date of diagnosis and the date and results of spirometry (in terms of percent of predicted forced vital capacity) must be supplied with the initial authority application.*

##### Authority Required

*Continuing treatment of amyotrophic lateral sclerosis in patients who have previously been issued with an authority prescription for this drug and who:*

- (1) are ambulatory, and*
- (a) have not undergone tracheostomy, and*
- (b) have not experienced respiratory failure; OR*
- (2) are not ambulatory, and*
- (a) have not undergone tracheostomy, and*
- (b) have not experienced respiratory failure, and*
- (c) are either able to use upper limbs or able to swallow.*

### ADRENALINE

#### Authority Required

*Initial supply for anticipated emergency treatment of acute allergic reactions with anaphylaxis in a patient who:*  
 (a) *has been assessed to be at significant risk of anaphylaxis by, or in consultation with, a clinical immunologist, allergist, paediatrician or respiratory physician. The name of the specialist consulted must be provided at the time of application for initial supply; or*

(b) *has been discharged from hospital or an emergency department after treatment with adrenaline for acute allergic reaction with anaphylaxis;*

*Continuing supply for anticipated emergency treatment of acute allergic reactions with anaphylaxis, where the patient has previously been issued with an authority prescription for this drug.*

#### NOTE:

*The auto-injector should be provided in the framework of a comprehensive anaphylaxis prevention program and an emergency action plan including training in recognition of the symptoms of anaphylaxis and the use of the auto-injector device. (For further information see the Australasian Society of Clinical Immunology and Allergy website at [www.allergy.org.au](http://www.allergy.org.au).)*

#### NOTE:

*Authorities for increased maximum quantities, up to a maximum of 2, may be authorised for children aged less than 17 years where 2 auto-injectors are necessary to ensure 1 is on hand at all times. No increased maximum quantities will be authorised for patients aged 17 years or older.*

*No repeats will be issued.*

### • **Leukotriene receptor antagonists**

#### **MONTELUKAST SODIUM**

##### **NOTE:**

*Montelukast sodium is not PBS-subsidised for use in children with moderate or severe asthma. It is not intended as an alternative for children who require a corticosteroid as a preventer medication. Montelukast sodium is not PBS-subsidised for use in combination with other preventer medications. PBS subsidy for montelukast sodium will therefore cease for patients who require a preventer medication in addition to montelukast sodium.*

##### **NOTE:**

*No applications for increased maximum quantities and/or repeats will be authorised.*

#### **Authority Required (STREAMLINED)**

2617

*First-line preventer medication, as the single preventer agent for children aged 2 to 5 years with frequent intermittent or mild persistent asthma, as an alternative to sodium cromoglycate or nedocromil sodium.*

### Ocular vascular disorder agents

#### • Antineovascularisation agents

##### ANECORTAVE ACETATE

##### Authority Required

*Initial treatment by an ophthalmologist, as the sole PBS-subsidised therapy, of predominantly (greater than or equal to 50%) classic, subfoveal choroidal neovascularisation (CNV) due to age-related macular degeneration (AMD), as diagnosed by fluorescein angiography, in a patient with a baseline visual acuity equal to or better than 6/60 (20/200).*

*No more than 10 treatments (1 initial and 9 continuing) per eye will be authorised.*

*Authority approvals will be administered by the PBS and Specialised Drugs Branch of Medicare Australia.*

*The first authority application for each eye must be made in writing, and must include:*

*(a) a completed authority prescription form; and*

*(b) a completed Subfoveal Choroidal Neovascularisation (CNV) - PBS Supporting Information Form [www.medicareaustralia.gov.au]; and*

*(c) a copy of the fluorescein angiogram demonstrating that the CNV is predominantly classic (greater than or equal to 50%).*

*Written applications for authority to prescribe anecortave acetate should be forwarded to:*

**Medicare Australia**

**Prior Written Approval of Specialised Drugs**

**Reply Paid 9826**

**GPO Box 9826**

**HOBART TAS 7001.**

*Alternatively, the first authority application may be faxed to Medicare Australia on (03) 6215 5474 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday). Medicare Australia will then contact the prescriber by telephone. The original documentation must be posted to the above address after approval has been gained.*

### **RANIBIZUMAB**

### Authority Required

*Initial treatment by an ophthalmologist, as the sole PBS-subsidised therapy, of subfoveal choroidal neovascularisation (CNV) due to age-related macular degeneration (AMD), as diagnosed by fluorescein angiography.*

*Where a fluorescein angiogram cannot be performed due to a contraindication as listed in the TGA-approved product information, details of the contraindication must be provided. A copy of the report of an alternative method of diagnosis must be included in the application, for example, optical coherence tomography (OCT) or red free photography.*

*Authority approvals will be administered by the PBS and Specialised Drugs Branch of Medicare Australia.*

*The first authority application for each eye must be made in writing, and must include:*

- (a) a completed authority prescription form; and*
- (b) a completed Subfoveal Choroidal Neovascularisation (CNV) - PBS Supporting Information Form [www.medicareaustralia.gov.au]; and*
- (c) a copy of the fluorescein angiogram or alternative method of diagnosis where applicable.*

*Written applications for authority to prescribe ranibizumab should be forwarded to:*

*Medicare Australia*

*Prior Written Approval of Specialised Drugs*

*Reply Paid 9826*

*GPO Box 9826*

*HOBART TAS 7001.*

*Alternatively, the first authority application may be faxed to Medicare Australia on (03) 6215 5474 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday). Medicare Australia will then contact the prescriber by telephone. The original documentation must be posted to the above address after approval has been gained.*

### Authority Required

### VERTEPORFIN

#### **Authority Required**

*Initial treatment by an ophthalmologist, as the sole PBS-subsidised therapy, of predominantly (greater than or equal to 50%) classic, subfoveal choroidal neovascularisation (CNV) due to age-related macular degeneration (AMD), as diagnosed by fluorescein angiography, in a patient with a baseline visual acuity equal to or better than 6/60 (20/200).*

*Authority approvals will be administered by the PBS and Specialised Drugs Branch of Medicare Australia.*

*The first authority application for each eye must be made in writing, and must include:*

- (a) a completed authority prescription form; and*
- (b) a completed Subfoveal Choroidal Neovascularisation (CNV) - PBS Supporting Information Form [www.medicareaustralia.gov.au]; and*
- (c) a copy of the fluorescein angiogram demonstrating that the CNV is predominantly classic (greater than or equal to 50%).*

*Written applications for authority to prescribe verteporfin should be forwarded to:*

**Medicare Australia**

**Prior Written Approval of Specialised Drugs**

**Reply Paid 9826**

**GPO Box 9826**

**HOBART TAS 7001.**

*Alternatively, the first authority application may be faxed to Medicare Australia on (03) 6215 5474 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday). Medicare Australia will then contact the prescriber by telephone. The original documentation must be posted to the above address after approval has been gained.*

*No more than 15 treatments (1 initial and 14 continuing) per eye will be authorised.*

*Medicare Australia should be notified if treatment is abandoned prior to completion of the laser activation step but after infusion of verteporfin. Telephone 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday). The reason treatment is abandoned must be provided. Where such notification has been made, the treatment so affected will not count towards the maximum.*

#### **Authority Required**

*Initial PBS-subsidised treatment by an ophthalmologist, as the sole PBS-subsidised therapy, of predominantly (greater than or equal to 50%) classic, subfoveal choroidal neovascularisation (CNV) due to macular degeneration where the patient has been authorised by the Angiogram Review Panel to receive treatment with verteporfin in the same eye under the MBS Visudyne Therapy Program.*

*Authority approvals will be administered by the PBS and Specialised Drugs Branch of Medicare Australia.*

*The first authority application for each eye must be made in writing, and must include:*

- (a) a completed authority prescription form; and*
- (b) a completed Subfoveal Choroidal Neovascularisation (CNV) - PBS Supporting Information Form [www.medicareaustralia.gov.au], which includes the date of review by the Angiogram Review Panel and the number of treatments administered in that eye under the MBS Visudyne Therapy Program; and*
- (c) a copy of the fluorescein angiogram demonstrating that the CNV is predominantly classic (greater than or equal to 50%).*

*Written applications for authority to prescribe verteporfin should be forwarded to:*

**Medicare Australia**

**Prior Written Approval of Specialised Drugs**

**Reply Paid 9826**

• **Fat/carbohydrates/proteins/minerals/vitamins, combinations****AMINO ACIDS—SYNTHETIC, FORMULA****Authority Required**

*Initial treatment for up to 3 months, by a clinical immunologist, suitably qualified allergist or gastroenterologist in a patient 18 years of age or less with eosinophilic oesophagitis who requires an amino acid based formula as a component of a dietary elimination programme. Treatment with oral steroids should not be commenced during the period of initial treatment.*

*Eosinophilic oesophagitis is demonstrated by the following criteria:*

*(i) Chronic symptoms of reflux that persisted despite a 2-month trial of a proton pump inhibitor or chronic dysphagia; and*

*(ii) A lack of demonstrable anatomic abnormality with the exception of stricture, which can be attributable to eosinophilic oesophagitis; and*

*(iii) Eosinophilic infiltration of the oesophagus, demonstrated by oesophageal biopsy specimens obtained by endoscopy and where the most densely involved oesophageal biopsy had 20 or more eosinophils in any single 400 x high powered field, along with normal antral and duodenal biopsies.*

*The date of birth of the patient must be included in the authority.*

**Authority Required**

*Continuing treatment by a clinical immunologist, suitably qualified allergist or gastroenterologist in a patient 18 years of age or less with eosinophilic oesophagitis who has responded to an initial course of PBS-subsidised treatment. Response to initial treatment is demonstrated by oesophageal biopsy specimens obtained by endoscopy, where the most densely involved oesophageal biopsy had 5 or less eosinophils in any single 400 x high powered field, along with normal antral and duodenal biopsies. The response criteria will not be deemed to have been met if oral steroids were commenced during initial treatment.*

**NOTE:**

*Authorities for increased maximum quantities, up to a maximum of 52, may be authorised.*

**Authority Required**

*Initial treatment, for up to 3 months, for intolerance (not infant colic) to both cows' milk protein and soy protein in a child up to the age of 2 years. Intolerance is demonstrated when the child has failed to respond to a strict cows' milk protein free diet with a soy protein as the principal formula. The date of birth of the patient must be included in the authority application;*

*Continuing treatment for intolerance (not infant colic) to both cows' milk protein and soy protein in a child up to the age of 2 years, where clinical improvement has been demonstrated with the protein hydrolysate formula with medium chain triglycerides. The date of birth of the patient must be included in the authority application;*

*Continuing treatment for intolerance (not infant colic) to both cows' milk protein and soy protein in a child aged 2 years and over, where the child has been assessed by a suitably qualified allergist or paediatrician. The date of birth of the patient must be included in the authority application.*

**Authority Required**

*Initial treatment, in consultation with a paediatric gastroenterologist or specialist allergist, for up to 3 months, of a child up to the age of 2 years with severe intolerance (not infant colic) to cows' milk protein. The date of birth of the patient must be included in the authority application;*

*Continuing treatment for severe intolerance (not infant colic) to cows' milk protein in a child up to the age of 2 years, where clinical improvement has been demonstrated with the protein hydrolysate formula with medium chain triglycerides and soy protein is not tolerated or is likely not to be tolerated. The date of birth of the patient must be included in the authority application;*

*Continuing treatment for severe intolerance (not infant colic) to cows' milk protein in a child aged 2 years and over, where the child has been assessed by a paediatric gastroenterologist or specialist allergist. The date of birth of the patient must be included in the authority application.*

**Authority Required**

*Biliary atresia;*

*Chronic liver failure with fat malabsorption;*

*Chylous ascites;*

*Cystic fibrosis;*

*Enterokinase deficiency;*

*Proven fat malabsorption;*

*Severe diarrhoea of greater than 2 weeks' duration in an infant aged less than 4 months. The date of birth of the patient must be included in the authority application;*

*Severe intestinal malabsorption including short bowel syndrome.*

**Authority Required**

*Proven chronic lactose intolerance in infants up to the age of 12 months. The date of birth of the patient must be included in the authority application. Lactose intolerance must have been proven by either:*

- (a) relief of symptoms on supervised withdrawal of lactose from the diet for 3 or 4 days and subsequent re-emergence of symptoms on rechallenge with lactose containing formulae or milk or food; or*  
*(b) not less than 0.5% reducing substance in stool exudate tested with copper sulfate diagnostic compound tablet; or*  
*(c) hydrogen breath test.*

**NOTE:**

*No applications for increased maximum quantities and/or repeats will be authorised.*

## PREPARATIONS WHICH MAY BE PRESCRIBED FOR PATIENTS RECEIVING PALLIATIVE CARE

---

### PREPARATIONS WHICH MAY BE PRESCRIBED FOR PATIENTS RECEIVING PALLIATIVE CARE

The prescribing of medications listed in this section is in accordance with the requirements for General Pharmaceutical Benefits in the Schedule unless otherwise detailed in the listing for the item.

In addition, certain additional principles have been applied by the Pharmaceutical Benefits Advisory Committee (PBAC) in recommending for whom these medications may be prescribed, and the number of repeats that may be approved by Medicare Australia. These principles have been encompassed in the listings for the items, and further details are provided below to help doctors prescribing under this section.

For the purposes of this section a patient receiving palliative care is defined as:

- *A patient with an active, progressive, far-advanced disease for whom the prognosis is limited and the focus of care is the quality of life.*

The provision for increased maximum quantities and up to 3 repeats on the *initial* authority prescription is intended to provide up to 4 months' therapy in total. Where *continuing* treatment is required the provision of repeats is subject to confirmation by the prescriber that a palliative care physician or palliative care service has been consulted regarding the care of the patient.

Prescribers must heed State/Territory laws when prescribing drugs listed as narcotic, specified or restricted and must notify, or receive approval from, the appropriate health authority.

When a Palliative Care authority application is for a drug of addiction, the following guidelines apply:

- the maximum quantity authorised is generally for 1 month's therapy;
- where supply for a longer period is warranted, quantities are for up to 3 months' therapy;
- telephone approvals are limited to 1 month's therapy.

Doctors should also state (on the prescription) the interval of repeat where repeats are called for, and ensure State/Territory health authorities are notified about ongoing treatment.

Prescribers should be aware that patients receiving palliative care may also access PBS items included in the general part of the Schedule of Pharmaceutical Benefits including narcotic preparations, according to the restrictions that apply to individual items and the requirements that apply to the general part of the Schedule.

|------|---------------------------------------------------------|-------------|----------------|---------|------------------------------------------|--------------------------------------------------------|--------------------------------------|

### Authority Required

*Continuing supply for palliative care patients where constipation is a problem.*

### NOTE:

*No applications for repeats will be authorised.*

|       |                                        |   |    |    |         |       |    |
|-------|----------------------------------------|---|----|----|---------|-------|----|
| 5314Q | Suppositories 700 mg (for infants), 12 | 3 | .. | .. | * 17.48 | 18.51 | PP |
| 5315R | Suppositories 1.4 g (for children), 12 | 3 | .. | .. | * 17.87 | 18.90 | PP |
| 5316T | Suppositories 2.8 g (for adults), 12   | 3 | .. | .. | * 18.32 | 19.35 | PP |

## MUSCULO-SKELETAL SYSTEM

### ANTIINFLAMMATORY AND ANTIRHEUMATIC PRODUCTS

#### Antiinflammatory and antirheumatic products, non-steroids

#### • Acetic acid derivatives and related substances

#### DICLOFENAC SODIUM

### Authority Required

*Initial supply (for up to 4 months) for palliative care patients where severe pain is a problem;*

*Continuing supply for palliative care patients where severe pain is a problem, and where consultation with a palliative care specialist or service has occurred.*

### NOTE:

*No applications for increased repeats will be authorised.*

### NERVOUS SYSTEM

#### ANALGESICS

##### Opioids

##### • Natural opium alkaloids

##### MORPHINE SULFATE

##### CAUTION:

*The risk of drug dependence is high.*

##### Authority Required

*Initial supply (for up to 3 months) for palliative care patients with severe disabling pain not responding to non-narcotic analgesics;*

*Continuing supply (for up to 3 months) for palliative care patients with severe disabling pain not responding to non-narcotic analgesics, and where consultation with a palliative care specialist or service has occurred.*

##### NOTE:

*Telephone approvals are limited to 1 month's therapy.*

**Sulfonamides and trimethoprim**

• **Combinations of sulfonamides and trimethoprim, incl. derivatives**

TRIMETHOPRIM with SULFAMETHOXAZOLE

**CAUTION:**

There is an increased risk of severe adverse reactions with this combination in the elderly.

## PREPARATIONS WHICH MAY BE PRESCRIBED BY AUTHORISED OPTOMETRISTS FOR OPTOMETRICAL TREATMENT ONLY

---

### PREPARATIONS WHICH MAY BE PRESCRIBED BY AUTHORISED OPTOMETRISTS FOR OPTOMETRICAL TREATMENT ONLY

From 1 January 2008, optometrists accredited to prescribe under State or Territory legislation can apply for approval as PBS prescribers (*authorised optometrists*). Information for optometrists on becoming a PBS prescriber is available on the Medicare Australia website at: [www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au)

The medications listed in this section are for prescribing by authorised optometrists only. Optometrists must not write PBS prescriptions for medicines listed elsewhere in the PBS Schedule.

The Pharmaceutical Benefits Advisory Committee (PBAC) is responsible for making recommendations regarding preparations for inclusion in the optometrist section.

Some products are included in more than one section of the Schedule. For a prescription to be eligible for subsidy, prescribers must ensure that they prescribe under the PBS only those medicines, and in accordance with the restrictions, listed for their practitioner type. Listing details for the same product may differ between sections and different PBS item codes apply for each prescriber type.

Optometrist PBS prescriptions are identifiable by colour, and include the words 'PBS/RPBS optometrist'. Prescriptions must include the optometrist's PBS prescriber number. The same optometrist prescription form is used to prescribe unrestricted, restricted or authority items. Only one item is allowed per form. Optometrist PBS prescriptions may include repeats.

Regulation 24 does not apply for optometrist prescribing. An optometrist cannot direct that original and repeat supplies of pharmaceutical benefits be supplied at the one time.

Authority prescriptions: Authority prescriptions for authority required items, or for increased quantities or repeats, require prior approval from Medicare Australia or the DVA for each prescription. (Refer to details in the Explanatory Notes section under Prescribing Medicines — Information for PBS prescribers and Supplying Medicines — What Pharmacists Need to Know, for more information on authority prescriptions.) DVA approval for non-Schedule items is not available for optometrist prescribing.

RPBS: Optometrists approved as PBS prescribers may write prescriptions for supply under the RPBS. The list of optometrist medicines under the RPBS is the same as the PBS. There are no optometrist listings in the Repatriation Schedule for prescribing for veterans only. There is no provision for optometrist prescribers to request approval to prescribe items that are not included in the PBS optometrist list (non-Schedule items).

State and Territory requirements: Optometrists may prescribe medications as private prescriptions according to their State/Territory prescribing accreditation. The medicines which can be prescribed differ between States and Territories. It is the optometrist's responsibility to ensure adherence to State/Territory law for all prescriptions (PBS and private) and additionally to all PBS requirements for PBS/RPBS prescriptions.

## SECTION 100 ITEMS

In addition to the drugs and medicinal preparations available under normal PBS arrangements listed in this Schedule, a number of drugs are also available as pharmaceutical benefits but are distributed under alternative arrangements where these are considered more appropriate.

These alternative arrangements are provided for under section 100 of the *National Health Act 1953*. Several programs exist for the provision of drugs as pharmaceutical benefits in this way and this section lists those drugs which are available under the following programs:

**HIGHLY SPECIALISED DRUGS PROGRAM**

**BOTULINUM TOXIN PROGRAM**

**HUMAN GROWTH HORMONE PROGRAM**

**IVF/GIFT PROGRAM**

**OPIATE DEPENDENCE TREATMENT PROGRAM**

**SPECIAL AUTHORITY PROGRAM**

Complete details concerning the availability of drugs as benefits under these programs may be obtained by telephoning the relevant contact number(s) shown in each section, or in certain cases, by referring to the telephone number provided for individual drugs listings.

|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

## HIGHLY SPECIALISED DRUGS PROGRAM

The Australian Government provides funding for certain specialised medications under the Highly Specialised Drugs Program. Highly Specialised Drugs are medicines for the treatment of chronic conditions which, because of their clinical use or other special features, are restricted to supply through public and private hospitals having access to appropriate specialist facilities. To prescribe these drugs as pharmaceutical benefit items, medical practitioners are required to be affiliated with these specialist hospital units. A general practitioner or non-specialist hospital doctor may only prescribe Highly Specialised Drugs to provide maintenance therapy under the guidance of the treating specialist.

Benefits are available for the listed clinical indications only. There is no facility for individual patient approval for indications outside those listed.

To gain access to a Commonwealth funded drug under this program, a patient must attend a participating hospital and be a day admitted patient, a non-admitted patient or a patient on discharge, be under appropriate specialist medical care, meet the specific medical criteria and be an Australian resident in Australia (or other eligible person).

A patient will be required to pay a contribution for each supply of a highly specialised drug at a similar rate to the Pharmaceutical Benefits Scheme. Commonwealth subsidy is not available for hospital in-patients.

Reciprocal Health Care Agreement – Where a patient is entitled to be treated as an eligible person as a visitor from a country with which Australia has entered into a Reciprocal Health Care Agreement, the supply will be limited to the original prescription only. Repeat prescriptions for these patients are not permitted.

Private Hospitals – **In addition to the above requirements**, for Highly Specialised Drugs prescribed through private hospitals, claiming and approval of authority prescriptions is administered by Medicare Australia. Highly Specialised Drugs are authority required items. Medical practitioners must seek approval to prescribe these items as pharmaceutical benefits prior to their dispensing under the PBS. Approval of authority prescriptions by Medicare Australia may be obtained either by posting an Authority Prescription Form to Medicare Australia, or by using Medicare Australia's Authority Freecall service (1800 888 333). **Prescribers must quote the provider number of the hospital when applying.** Not more than two months' supply (one month's supply in the case of Clozapine), with provision for up to 5 repeats, will be authorised. Prescriptions for Highly Specialised Drugs can be dispensed by an approved private hospital's dispensary or by a community pharmacy.

The remuneration rates for Highly Specialised Drugs prescribed through private hospitals comprise the normal PBS ready- prepared dispensing fee plus a mark-up ascertained as follows:

- 10% for drugs with a price ex-manufacturer of less than \$40;
- \$4 for drugs with a price ex-manufacturer of between \$40 and \$100;
- 4% for drugs with a price ex-manufacturer of between \$100.01 and \$1000;
- \$40 for drugs with a price ex-manufacturer of greater than \$1000.

Public Hospitals – For Highly Specialised Drugs prescribed through public hospitals, claiming and access to the program is administered by the States/Territories Health Departments. Prescriptions for Highly Specialised Drugs can be dispensed by public hospital pharmacies.

If you would like further information about the Highly Specialised Drugs Program, please contact your pharmacy, Medicare Australia (Ph: 132 290) or the Australian Government adviser, the Highly Specialised Drugs Working Party Secretariat (Ph: (02) 6289 2331).

## HIGHLY SPECIALISED DRUGS PROGRAM

### ABACAVIR SULFATE

#### Private hospital authority required

*Treatment of HIV infection in patients with:*

- (a) CD4 cell counts of less than 500 per cubic millimetre; or
- (b) viral load of greater than 10,000 copies per mL.

|       |                                           |    |        |        |    |
|-------|-------------------------------------------|----|--------|--------|----|
| 6264Q | Tablet 300 mg (base)                      | 60 | 423.00 | Ziagen | GK |
| 6265R | Oral solution 20 mg (base) per mL, 240 mL | 1  | 75.20  | Ziagen | GK |

#### NOTE:

*These prices are based on special supply arrangements—see Pharmaceutical Benefits Pricing Authority relativity sheet for full details.*

### ABACAVIR SULFATE with LAMIVUDINE

#### Private hospital authority required

*Treatment of HIV infection in patients over 12 years of age, weighing 40 kg or more, with:*

- (a) CD4 cell counts of less than 500 per cubic millimetre; or
- (b) viral load of greater than 10,000 copies per mL.

### ABATACEPT

#### NOTE:

*Any queries concerning the arrangements to prescribe abatacept may be directed to Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

*Written applications for authority to prescribe abatacept should be forwarded to:*

*Medicare Australia*

*Prior Written Approval of Specialised Drugs*

*Reply Paid 9826*

*GPO Box 9826*

*HOBART TAS 7001*

*Further prescribing information is on the Medicare Australia website at [www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au).*

#### NOTE:

### TREATMENT OF ADULT PATIENTS WITH SEVERE ACTIVE RHEUMATOID ARTHRITIS

*The following information applies to the prescribing under the Pharmaceutical Benefits Scheme (PBS) of the biological disease modifying anti-rheumatic drugs (bDMARDs) for adults with severe active rheumatoid arthritis. Where the term bDMARD appears in the following notes and restrictions it refers to the tumour necrosis factor (TNF) alfa antagonists (adalimumab, etanercept, infliximab), the chimeric anti-CD20 monoclonal antibody (rituximab), the interleukin-1 inhibitor (anakinra) and the T-cell co-stimulation modulator (abatacept).*

*Patients are eligible for PBS-subsidised treatment with only 1 of the above biological disease modifying anti-rheumatic drugs at any 1 time.*

|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

**Rituximab patients:**

A further application may be submitted to Medicare Australia 24 weeks after the first infusion. New baselines may be submitted with this application if appropriate.

**(b) Continuing treatment.**

Following the completion of an initial treatment course with a specific bDMARD (excluding rituximab), a patient may qualify to receive up to 24 weeks of continuing treatment with that drug providing they have demonstrated an adequate response to treatment. The patient remains eligible to receive continuing bDMARD treatment with the same drug in courses of up to 24 weeks providing they continue to sustain the response.

It is recommended that a patient be reviewed in the month prior to completing their current course of treatment to ensure uninterrupted bDMARD supply.

Assessments of response to a course of PBS-subsidised therapy must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased.

**Rituximab patients:**

A patient may qualify to receive a further course of treatment (every 24 weeks) with this agent providing they have demonstrated an adequate response to treatment following a minimum of 12 weeks after the first infusion of their most recent treatment with rituximab. The patient remains eligible to receive a course of rituximab every 24 weeks providing they continue to demonstrate a response as specified in the restriction.

Where a response assessment is not submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with that bDMARD.

**(2) Swapping therapy.**

Once initial treatment with the first PBS-subsidised bDMARD is approved, a patient may swap to an alternate bDMARD within the same Treatment Cycle without having to requalify with respect to the indices of disease severity (i.e. the erythrocyte sedimentation rate (ESR), the C-reactive protein (CRP) levels and the joint count) or the prior non-bDMARD therapy requirements. However the requirement for concomitant treatment with methotrexate, where it applies, must be met for each bDMARD trialled.

Patients who are not able to complete a minimum of 12 weeks of an initial treatment course will be deemed to have failed treatment with that agent.

A patient may trial an alternate bDMARD at any time, regardless of whether they are receiving therapy (initial or continuing) with a bDMARD at the time of the application. However, they cannot swap to a particular bDMARD if they have failed to respond to prior treatment with that drug within the same Treatment Cycle.

In order to trial rituximab, a patient must have trialled and failed to demonstrate a response to at least 1 PBS-subsidised TNF- $\alpha$  antagonist treatment.

To ensure a patient receives the maximum treatment opportunities allowed under the interchangeability arrangements, it is important that they are assessed for response to every course of treatment approved, within the timeframes specified in the relevant restriction.

PBS subsidy does not allow for patients to receive treatment with another PBS-subsidised biological agent during the required treatment-free period applying to patients who have demonstrated a response to their most recent course of rituximab. This means that patients who have demonstrated a response to a course of rituximab must have a PBS-subsidised biological therapy treatment-free period of at least 22 weeks, immediately following the second infusion, before swapping to an alternate bDMARD. Patients who fail to respond to rituximab and who qualify and wish to trial a course of an alternate bDMARD may do so without having to have any treatment-free period.

To avoid confusion, an application for a patient who wishes to swap to an alternate bDMARD should be accompanied by the approved authority prescription or remaining repeats for the bDMARD the patient is ceasing.

**NOTE:**

**(3) Baseline measurements to determine response.**

Medicare Australia will determine whether a response to treatment has been demonstrated based on the baseline measurements of the joint count, ESR and/or CRP submitted with the first authority application for a bDMARD. However, prescribers may provide new baseline measurements any time that an initial treatment authority application is submitted within a Treatment Cycle and Medicare Australia will assess response according to these revised baseline measurements.

| Code | Item and Section 100 Restriction | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

To ensure consistency in determining response, the same indices of disease severity used to establish baseline at the commencement of treatment with each initial treatment application must be provided for all subsequent continuing treatment applications. Therefore, where only an ESR or CRP level is provided at baseline, an ESR or CRP level respectively must be provided to determine response. Similarly, where the baseline active joint count is based on total active joints (i.e. more than 20 active joints), response will be determined according to the reduction in the total number of active joints. Where the baseline is determined on total number of major joints, the response must be demonstrated on the total number of major joints.

The baseline joint and blood counts should be performed whilst the patient is still on treatment or within 1 month of ceasing prior treatment.

(4) Re-commencement of treatment after a 5-year break in PBS-subsidised therapy.

A patient who wishes to trial a second or subsequent Treatment Cycle following a break in PBS-subsidised bDMARD therapy of at least 5 years, must requalify for initial treatment with respect to the indices of disease severity. Patients must have received treatment with at least 1 non-biological DMARD, at an adequate dose, for a minimum of 3 months at the time the ESR and/or CRP levels and the active joint count are measured.

(5) Patients 'grandfathered' onto PBS-subsidised treatment with rituximab or abatacept.

From 1 March 2008, a patient who commenced treatment with rituximab for severe rheumatoid arthritis prior to 7 March 2007 or abatacept for severe rheumatoid arthritis prior to 1 November 2007 and who was 'grandfathered' on to PBS-subsidised therapy, and who continues to receive treatment in the same Treatment Cycle, will have further applications for treatment with rituximab or abatacept assessed under the continuing treatment restriction.

A patient may only qualify for PBS-subsidised treatment under this criterion once. A maximum of 24 weeks of treatment with abatacept will be authorised under this criterion.

'Grandfather' arrangements will only apply for the first Treatment Cycle. For the second and subsequent Cycles, a 'grandfather' patient must requalify for initial treatment under the criteria that applies to a new patient. See 'Re-commencement of treatment after a 5-year break in PBS-subsidised therapy' above for further details.

#### **Public and private hospital authority required**

##### *Initial 1 (new patients)*

Application for initial PBS-subsidised treatment with abatacept, in combination with methotrexate at a dose of at least 7.5 mg weekly, by a rheumatologist or clinical immunologist with expertise in the management of rheumatoid arthritis, of adults who:

- (a) have severe active rheumatoid arthritis; and
- (b) have received no prior PBS-subsidised treatment with a bDMARD for this condition in this treatment cycle; and
- (c) have failed to achieve an adequate response to the following treatments:
  - (i) methotrexate at a dose of at least 20 mg weekly; and
  - (ii) methotrexate (at a minimum dose of 7.5 mg weekly), in combination with 2 other non-biological disease modifying anti-rheumatic drugs (DMARDs), for a minimum of 3 months; and
  - (iii) a minimum of 3 months' treatment with:
    - leflunomide alone; or
    - leflunomide in combination with methotrexate; or
    - cyclosporin.

If treatment with any of the above-mentioned drugs is contraindicated according to the relevant TGA-approved Product Information, please provide details at the time of application.

If intolerance to treatment develops during the relevant period of use, which is of a severity necessitating permanent treatment withdrawal, please provide details of the degree of this toxicity at the time of application. Details of the accepted toxicities, including severity, can be found on the Medicare Australia website [[www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au)].

|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

*The following initiation criteria indicate failure to achieve an adequate response and must be demonstrated in all patients at the time of the initial application:*  
*an elevated erythrocyte sedimentation rate (ESR) greater than 25 mm per hour or a C-reactive protein (CRP) level greater than 15 mg per L;*

*AND either*

*(i) a total active joint count of at least 20 active (swollen and tender) joints; or*

*(ii) at least 4 active joints from the following list of major joints:*

*— elbow, wrist, knee and/or ankle (assessed as swollen and tender); and/or*

*— shoulder and/or hip (assessed as pain in passive movement and restriction of passive movement, where pain and limitation of movement are due to active disease and not irreversible damage such as joint destruction or bony overgrowth).*

*All tests and assessments should be performed preferably whilst still on treatment, but no longer than 1 month following cessation of the most recent prior treatment.*

*If the above requirement to demonstrate an elevated ESR or CRP cannot be met, the application must state the reasons why this criterion cannot be satisfied.*

*The authority application must be made in writing and must include:*

*(1) a completed authority prescription form; and*

*(2) a completed Rheumatoid Arthritis PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))] which includes details of the patient's ESR and CRP measurements and the patient's active joint count which must have been assessed no earlier than 1 month prior to the date of application; and*

*(3) a signed patient acknowledgement.*

*A maximum of 16 weeks of treatment will be authorised under this restriction.*

*At the time of the authority application, medical practitioners should request the appropriate quantity of vials, based on the weight of the patient, to provide sufficient for a single infusion. Up to a maximum of 4 repeats may be authorised.*

*Where fewer than 4 repeats are requested at the time of the initial application, authority approvals for sufficient repeats to complete a maximum of 16 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

*Assessment of a patient's response to an initial course of treatment must be made after at least 12 weeks of treatment so that there is adequate time for a response to be demonstrated. This assessment, which will be used to determine eligibility for continuing treatment, must be submitted to Medicare Australia no later than 1 month from the date of completion of this initial course of treatment. Where a response assessment is not undertaken and submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with abatacept.*

*Patients who fail to demonstrate a response to treatment with abatacept under this restriction will not be eligible to receive further PBS-subsidised treatment with this drug, in this treatment cycle. Patients may re-trial abatacept after a minimum of 5 years have elapsed between the date the last prescription for a PBS-subsidised bDMARD was approved in this cycle and the date of the first application under the new cycle.*

#### **Public and private hospital authority required**

*Initial 2 (change or re-commencement)*

*Application for an initial course of PBS-subsidised treatment with abatacept, in combination with methotrexate at a dose of at least 7.5 mg weekly, by a rheumatologist or clinical immunologist with expertise in the management of rheumatoid arthritis, of adults who:*

*(a) have a documented history of severe active rheumatoid arthritis; and*

*(b) have received prior PBS-subsidised bDMARD treatment for this condition in this treatment cycle and are eligible to receive further bDMARD therapy.*

*The authority application must be made in writing and must include:*

*(1) a completed authority prescription form; and*

*(2) a completed Rheumatoid Arthritis PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))].*

| Code | Item and Section 100 Restriction | Pack Size | Price ex Manufacturer \$ | Proprietary Name and Manufacturer |
|------|----------------------------------|-----------|--------------------------|-----------------------------------|
|------|----------------------------------|-----------|--------------------------|-----------------------------------|

*Applications for patients who have received PBS-subsidised treatment with abatacept within this treatment cycle and who wish to re-commence therapy with this drug within this same cycle, must be accompanied by evidence of a response to the patient's most recent course of PBS-subsidised abatacept treatment, within the timeframes specified below.*

*A maximum of 16 weeks of treatment will be authorised under this restriction.*

*At the time of the authority application, medical practitioners should request the appropriate quantity of vials, based on the weight of the patient, to provide sufficient for a single infusion. Up to a maximum of 4 repeats may be authorised.*

*Where fewer than 4 repeats are requested at the time of the initial application, authority approvals for sufficient repeats to complete a maximum of 16 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

*Where the most recent course of PBS-subsidised abatacept treatment was approved under either of the initial treatment restrictions (i.e. for patients with no prior PBS-subsidised bDMARD therapy or, under this restriction, for patients who have received previous PBS-subsidised bDMARD therapy), patients must have been assessed for response following a minimum of 12 weeks of therapy. This assessment must be provided to Medicare Australia no later than 4 weeks from the date that course was ceased.*

*Where the most recent course of PBS-subsidised abatacept treatment was approved under the continuing treatment criteria, patients must have been assessed for response, and the assessment must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased.*

*Patients who fail to demonstrate a response to treatment with abatacept under this restriction will not be eligible to receive further PBS-subsidised treatment with this drug, in this treatment cycle. Patients may re-trial abatacept after a minimum of 5 years have elapsed between the date the last prescription for a PBS-subsidised bDMARD was approved in this cycle and the date of the first application under the new cycle.*

#### **Public and private hospital authority required**

*Initial 3 ('grandfather' patients)*

*Initial PBS-subsidised supply for continuing treatment with abatacept, in combination with methotrexate at a dose of at least 7.5 mg weekly, by a rheumatologist or clinical immunologist with expertise in the management of rheumatoid arthritis, of an adult who:*

- (a) has a documented history of severe active rheumatoid arthritis; and*
- (b) was receiving treatment with abatacept prior to 1 November 2007; and*
- (c) has demonstrated a response as specified in the criteria for continuing PBS-subsidised treatment with abatacept.*

*The authority application must be made in writing and must include:*

- (1) a completed authority prescription form; and*
- (2) a completed Rheumatoid Arthritis PBS Authority Application - Supporting Information Form [www.medicareaustralia.gov.au] which includes the signed patient acknowledgement.*

*The same indices of disease severity used to establish baseline at the commencement of treatment with a bDMARD must be used for assessment of all continuing applications.*

*The assessment of the patient's response to a continuing course of therapy must be made within 4 weeks prior to completion of that course and posted to Medicare Australia no less than 2 weeks prior to the date the next dose is scheduled in order to ensure continuity of treatment for those patients who meet the continuation criterion.*

*A maximum of 24 weeks of treatment with abatacept will be approved under this criterion.*

*At the time of the authority application, medical practitioners should request the appropriate quantity of vials, based on the weight of the patient, to provide sufficient for a single infusion. Up to a maximum of 5 repeats may be authorised.*

*Where fewer than 5 repeats are initially requested with the authority prescription, authority approvals for sufficient repeats to complete a maximum of 24 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

*Patients may qualify for PBS-subsidised treatment under this restriction once only.*

**BOSENTAN MONOHYDRATE****CAUTION:**

*Bosentan monohydrate is a category X drug and must not be given to pregnant women. Pregnancy must be avoided during treatment and for at least 3 months following cessation of treatment with this drug.*

**NOTE:**

*Any queries concerning the arrangements to prescribe bosentan monohydrate may be directed to Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

*Written applications for authority to prescribe bosentan monohydrate should be forwarded to:*

*Medicare Australia*

*Prior Written Approval of Specialised Drugs*

*Reply Paid 9826*

*GPO Box 9826*

*HOBART TAS 7001*

**NOTE:**

*Bosentan monohydrate is not PBS-subsidised for patients with pulmonary hypertension secondary to interstitial lung disease associated with scleroderma, where the total lung capacity is less than 70% of that predicted.*

*Bosentan monohydrate is not PBS-subsidised when used in combination with PBS-subsidised iloprost trometamol, PBS-subsidised epoprostenol sodium, PBS-subsidised sildenafil citrate or PBS-subsidised sitaxentan sodium.*

*The following provides some explanatory notes regarding the availability of PBS-subsidised treatment with:*

*(a) bosentan monohydrate, of primary pulmonary hypertension, pulmonary arterial hypertension secondary to scleroderma, or pulmonary arterial hypertension associated with a congenital systemic-to-pulmonary shunt (including Eisenmenger's physiology), in patients with disease of WHO Functional Class III or IV severity; AND*

*(b) iloprost trometamol, of primary pulmonary hypertension, drug-induced pulmonary arterial hypertension or pulmonary arterial hypertension secondary to connective tissue disease, in patients with disease of WHO Functional Class III or IV severity; AND*

*(c) epoprostenol sodium, of primary pulmonary hypertension, in patients with disease of WHO Functional Class III or IV severity; AND*

*(d) sildenafil citrate, of primary pulmonary hypertension or pulmonary arterial hypertension secondary to connective tissue disease, in patients with disease of WHO Functional Class III severity; AND*

*(e) sitaxentan sodium, of primary pulmonary hypertension or pulmonary arterial hypertension secondary to connective tissue disease, in patients with disease of WHO Functional Class III severity.*

**Adult patients:**

*From 1 April 2008, adult patients with primary pulmonary hypertension will be able to access, through the PBS, bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate (WHO Class III only) or sitaxentan sodium (WHO Class III only). Once these patients are approved initial treatment with 1 of these 5 drugs, they may swap between bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate and sitaxentan sodium at any time without having to re-qualify for treatment with the alternate agent. This means that patients may commence treatment with the alternate agent, subject to that agent's restriction, irrespective of the severity of their disease at the time the application to swap therapy is submitted. It also means that no new baseline measurements will be necessary. (New baselines may be submitted where the patient has failed to respond to their current treatment.)*

*Patients may only swap to bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium if they have not failed prior PBS-subsidised treatment with that drug.*

|------|----------------------------------|-----------|--------------------------|-----------------------------------|
|------|----------------------------------|-----------|--------------------------|-----------------------------------|

*Adult patients with pulmonary arterial hypertension secondary to scleroderma will be able to access, through the PBS, bosentan monohydrate, iloprost trometamol, sildenafil citrate (WHO Class III only) or sitaxentan sodium (WHO Class III only). Once these patients are approved initial treatment with 1 of these 4 drugs, they may swap between bosentan monohydrate, iloprost trometamol, sildenafil citrate and sitaxentan sodium at any time without having to re-qualify for treatment with the alternate agent. This means that patients may commence treatment with the alternate agent, subject to that agent's restriction, irrespective of the severity of their disease at the time the application to swap therapy is submitted. It also means that no new baseline measurements will be necessary. (New baselines may be submitted where the patient has failed to respond to their current treatment.)*

*Patients may only swap to bosentan monohydrate, iloprost trometamol, sildenafil citrate or sitaxentan sodium if they have not failed prior PBS-subsidised treatment with that drug.*

*Adult patients with pulmonary arterial hypertension secondary to connective tissue disease other than scleroderma will be able to access, through the PBS, iloprost trometamol, sildenafil citrate (WHO Class III only) or sitaxentan sodium (WHO Class III only). Once these patients are approved initial treatment with 1 of these 3 drugs, they may swap between iloprost trometamol, sildenafil citrate and sitaxentan sodium at any time without having to re-qualify for treatment with the alternate agent. This means that patients may commence treatment with the alternate agent, subject to that agent's restriction, irrespective of the severity of their disease at the time the application to swap therapy is submitted. It also means that no new baseline measurements will be necessary. (New baselines may be submitted where the patient has failed to respond to their current treatment.)*

*Patients may only swap to iloprost trometamol, sildenafil citrate or sitaxentan sodium if they have not failed prior PBS-subsidised treatment with that drug.*

*Patients with drug-induced pulmonary arterial hypertension are only eligible for treatment with iloprost trometamol. They may not swap to bosentan monohydrate, epoprostenol sodium, sildenafil citrate or sitaxentan sodium.*

*Patients with pulmonary arterial hypertension associated with a congenital systemic-to-pulmonary shunt (including Eisenmenger's physiology) are only eligible for treatment with bosentan monohydrate. They may not swap to epoprostenol sodium, iloprost trometamol, sildenafil citrate or sitaxentan sodium.*

*Patients under 18 years of age:*

*From 1 April 2008, patients aged less than 18 years with primary pulmonary hypertension are eligible to receive PBS-subsidised treatment with bosentan monohydrate, epoprostenol sodium, iloprost trometamol, sildenafil citrate (WHO Class III only) or sitaxentan sodium (WHO Class III only). Once these patients are approved initial treatment with 1 of these 5 drugs, they may swap between bosentan monohydrate, epoprostenol sodium, iloprost trometamol, sildenafil citrate and sitaxentan sodium at any time without having to re-qualify for treatment with the alternate agent. This means that patients may commence treatment with the alternate agent, subject to that agent's restriction, irrespective of the severity of their disease at the time the application to swap therapy is submitted. It also means that no new baseline measurements will be necessary. (New baselines may be submitted where the patient has failed to respond to their current treatment.)*

*Patients may only swap to bosentan monohydrate, epoprostenol sodium, iloprost trometamol, sildenafil citrate or sitaxentan sodium if they have not failed prior PBS-subsidised treatment with that drug.*

*1. Definition of primary pulmonary hypertension, drug-induced pulmonary arterial hypertension, pulmonary arterial hypertension secondary to connective tissue disease, including scleroderma, or pulmonary arterial hypertension associated with a congenital systemic-to-pulmonary shunt (including Eisenmenger's physiology).*

*Primary pulmonary hypertension, drug-induced pulmonary arterial hypertension, pulmonary arterial hypertension secondary to connective tissue disease, including scleroderma, or pulmonary arterial hypertension associated with a congenital systemic-to-pulmonary shunt (including Eisenmenger's physiology) are defined as follows:*

- (i) mean pulmonary artery pressure (mPAP) greater than 25 mmHg at rest and pulmonary capillary wedge pressure (PCWP) less than 18 mmHg; or*
- (ii) mPAP greater than 30 mmHg with exercise and PCWP less than 18 mmHg; or*
- (iii) where a right heart catheter cannot be performed on clinical grounds, right ventricular systolic pressure (RVSP), assessed by echocardiography (ECHO), greater than 40 mmHg, with normal left ventricular function.*

*2. Definition of WHO Functional Class III or IV disease severity.*

| Code | Item and Section 100 Restriction | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

(a) *WHO Functional Class III disease severity is defined as follows:*

*Patients with pulmonary hypertension resulting in marked limitation of physical activity who are comfortable at rest and on ordinary physical activity experience dyspnoea or fatigue, chest pain or near syncope.*

(b) *WHO Functional Class IV disease severity is defined as follows:*

*Patients with the inability to carry out any physical activity without symptoms. These patients manifest signs of right heart failure. Dyspnoea and/or fatigue may even be present at rest. Discomfort is increased by any physical activity.*

### 3. Designated hospitals.

*Refer to the Medicare Australia website at [www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au) for a list of designated hospitals.*

### 4. Test requirements to establish baseline for initiation of treatment and response to treatment for continuation of treatment.

#### (a) Initiation of treatment.

*The first written application for PBS-subsidised treatment with the first of either bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium should be accompanied by the results of a right heart catheter (RHC) composite assessment, plus an echocardiograph (ECHO) composite assessment, plus a 6 minute walk test (6MWT) to establish the patient's baseline measurements.*

*Where it is not possible to perform all 3 tests above on clinical grounds, the following list outlines the preferred test combination, in descending order, for the purposes of initiation of PBS-subsidised treatment:*

*(1) RHC plus ECHO composite assessments;*

*(2) RHC composite assessment plus 6MWT;*

*(3) RHC composite assessment only.*

*In circumstances where a RHC cannot be performed on clinical grounds, applications may be submitted to Medicare Australia for consideration based on the results of the following test combinations, which are listed in descending order of preference:*

*(1) ECHO composite assessment plus 6MWT;*

*(2) ECHO composite assessment only.*

*Where fewer than 3 tests are able to be performed on clinical grounds, a reason outlining why the particular test/s could not be conducted must be provided with the authority application.*

#### NOTE:

*Where patients were initiated on PBS-subsidised treatment either with bosentan monohydrate on or after 1 March 2004, with iloprost trometamol on or after 1 April 2005, with epoprostenol sodium on or after 1 August 2006, with sildenafil citrate on or after 1 March 2007, with sitaxentan sodium on or after 1 April 2008, or with bosentan monohydrate (for PAH associated with congenital systemic-to-pulmonary shunt) on or after 1 August 2008, the test results provided with the initial application must be no more than 2 months old at the time of application. These results will form the baseline against which response assessments will be made.*

*Where patients received treatment with either bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium prior to being commenced on PBS-subsidised treatment with the first of either bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium, the test requirements above still apply. The results that will form the baseline against which response assessments will be made will be those measured at the time patients commenced non-PBS-subsidised treatment with either bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium, whichever of the 5 drugs the patient received first.*

#### (b) Continuation of treatment.

*The following list outlines the preferred test combination, in descending order, for the purposes of continuation of PBS-subsidised treatment:*

*(1) RHC plus ECHO composite assessments plus 6MWT;*

*(2) RHC plus ECHO composite assessments;*

*(3) RHC composite assessment plus 6MWT;*

*(4) ECHO composite assessment plus 6MWT;*

*(5) RHC composite assessment only;*

*(6) ECHO composite assessment only.*

| Code | Item and Section 100 Restriction | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

*The results of the same tests as conducted at baseline should be provided with each written continuing treatment application (i.e. every 6 months), except for patients who were able to undergo all 3 tests at baseline, and whose subsequent ECHO and 6MWT results demonstrate disease stability or improvement, in which case RHC can be omitted. In all other patients, where the same test(s) conducted at baseline cannot be performed for assessment of response on clinical grounds, a reason why the test(s) could not be conducted must be provided with the application.*

*The test(s) results provided with the application for continuing treatment must be no more than 2 months old at the time of application.*

**5. Definition of response to bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate, sitaxentan sodium or prior vasodilator treatment.**

*For adult patients with 2 or more baseline tests, response to treatment is defined as 2 or more tests demonstrating stability or improvement of disease, as assessed by a physician from a designated hospital.*

*For adult patients with a RHC composite assessment alone at baseline, response to treatment is defined as a RHC result demonstrating stability or improvement of disease, as assessed by a physician from a designated hospital.*

*For adult patients with an ECHO composite assessment alone at baseline, response to treatment is defined as an ECHO result demonstrating stability or improvement of disease, as assessed by a physician from a designated hospital.*

*For patients aged less than 18 years, response to treatment is defined as at least 1 of the baseline tests demonstrating stability or improvement of disease, as assessed by a physician from a designated hospital.*

**6. Authority approval requirements. [The following 2 sections are only relevant to the PBS listing of bosentan monohydrate. The requirements specific to iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium are given in parts 6 and 7 of the NOTE included in the iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium Schedule entry respectively.]**

**(a) Initiation of PBS-subsidised treatment with bosentan monohydrate, where the patient has not received prior PBS-subsidised treatment with iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium.**

*All applications for initial treatment must be made in writing, must include 2 separate authority prescriptions and must be submitted to Medicare Australia for authorisation. The total duration of initial PBS-subsidised treatment that will be approved with this first written application is up to 6 months.*

*Approvals for the first authority prescription will be limited to 1 month of therapy with the 62.5 mg strength tablet, with the quantity approved based on the dosage recommendations in the Therapeutic Goods Administration (TGA)-approved Product Information. No repeats will be authorised for this prescription. The second authority prescription may be written for either the 62.5 mg tablet or the 125 mg tablet strengths. Where the 62.5 mg tablet strength is required, please contact Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday) for further advice. Approvals for the second authority prescription will be limited to 1 month of treatment, with the quantity approved based on the dosage recommendations in the TGA-approved Product Information, and a maximum of 4 repeats. The approved second authority prescription will be returned to the prescriber by Medicare Australia 2 weeks after the date of the approval of the first authority prescription, to allow for the uninterrupted completion of the 6 month initial treatment course. Medicare Australia will contact prescribers prior to dispatch of the second authority prescription to confirm the tablet strength required for the patient.*

**(b) Continuation of treatment.**

*Written applications for continuing treatment must be submitted to Medicare Australia for authorisation every 6 months. Approvals will be limited to provide sufficient supply for up to a maximum of 6 months of treatment, based on the dosage recommendations in the TGA-approved Product Information.*

*Applications for continuing treatment will only be approved for patients who have currently demonstrated a response to treatment with bosentan monohydrate.*

*The assessment of the patient's response to the first and subsequent 6 month courses of treatment should be made following the preceding 5 months of treatment, in order to allow sufficient time for a response to be demonstrated. Applications for continuing treatment with bosentan monohydrate should be made prior to the completion of the 6 month treatment course to ensure continuity for those patients who respond to treatment, as assessed by the treating physician.*

| Code | Item and Section 100 Restriction | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

*(c) Swapping between bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate and sitaxentan sodium.*

*For eligible patients, applications to swap between these 5 drugs must be made under the relevant initial treatment restriction. Patients should be assessed for response to the treatment they are ceasing at the time the application to swap therapy is being made. Patients who fail to demonstrate a response or for whom no assessment results are submitted with the application to swap therapy may not re-commence PBS-subsidised treatment with the drug they are ceasing.*

*It is important that patients are assessed for response to every course of treatment approved within the timeframes specified in the relevant restriction, in order to maximise the choice of treatment.*

*To avoid confusion, applications for patients who wish to swap to an alternate treatment should be accompanied by the previously approved authority prescription, or remaining repeats, for the treatment the patient is ceasing.*

*(d) Cessation of treatment.*

*Patients who fail to demonstrate a response to PBS-subsidised bosentan monohydrate treatment at the times where an assessment is required must cease PBS-subsidised bosentan monohydrate therapy.*

*For patients ceasing treatment, approval will only be granted to provide sufficient supply of the 62.5 mg tablet strength to allow gradual dose reduction over a period of no more than 1 month duration. Prescribers should telephone Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday) to receive authorisation for this final supply and to ensure no unintended break in treatment occurs.*

**7. Re-treatment with bosentan monohydrate.**

*Patients who do not respond to treatment are not eligible to receive further PBS-subsidised treatment with bosentan monohydrate under any circumstances.*

**8. Further information.**

*A tabulated representation of the above information and the restriction can be obtained from the Medicare Australia website at [www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au).*

#### **Public and private hospital authority required**

##### *Initial (new adult patients)*

*Application for initial PBS-subsidised treatment with bosentan monohydrate of adult patients who have not received prior PBS-subsidised treatment with iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium and who have been assessed by a physician from a designated hospital to have:*

*(a) WHO Functional Class III primary pulmonary hypertension and a mean right atrial pressure of 8 mmHg or less, as measured by RHC, unless a RHC is contraindicated on clinical grounds; OR*

*(b) WHO Functional Class III pulmonary arterial hypertension secondary to scleroderma and a mean right atrial pressure of 8 mmHg or less, as measured by RHC, unless a RHC is contraindicated on clinical grounds.*

*Patients must have failed to respond [see Note for definition of response] to 6 or more weeks of appropriate vasodilator treatment unless intolerance or a contraindication to such treatment exists.*

*In circumstances where a RHC cannot be performed on clinical grounds, applications may be submitted to Medicare Australia for consideration based on the test results of the ECHO composite assessment plus 6MWT or the ECHO composite assessment only.*

|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

*Applications for authorisation must be in writing and must include:*

- (1) two completed authority prescription forms [see Note for authority approval requirements]; and  
 (2) a completed Pulmonary Arterial Hypertension PBS Authority Application - Supporting Information form [www.medicareaustralia.gov.au] which includes results from the 3 tests below, where available:

- (i) RHC composite assessment; and  
 (ii) ECHO composite assessment; and  
 (iii) 6MWT; and

(3) a signed patient acknowledgment indicating that the patient understands and acknowledges that PBS-subsidised treatment with bosentan monohydrate for primary pulmonary hypertension, pulmonary arterial hypertension secondary to scleroderma, or pulmonary arterial hypertension associated with a congenital systemic-to-pulmonary shunt (including Eisenmenger's physiology), OR with iloprost trometamol for primary pulmonary hypertension, drug-induced pulmonary arterial hypertension or pulmonary arterial hypertension secondary to connective tissue disease, OR with epoprostenol sodium for primary pulmonary hypertension, OR with sildenafil citrate for primary pulmonary hypertension or pulmonary arterial hypertension secondary to connective tissue disease, OR with sitaxentan sodium for primary pulmonary hypertension or pulmonary arterial hypertension secondary to connective tissue disease, will cease if the treating physician determines that the patient has not achieved a response to treatment [see Note for definition of response].

Details of prior vasodilator treatment, including the dose and duration of treatment, must be provided at the time of application. Where the patient has an adverse event to a vasodilator or where vasodilator treatment is contraindicated, details on the nature of the adverse event or contraindication according to the TGA-approved Product Information must also be provided with the application.

Where fewer than 3 tests (see requirement 2 above) are able to be performed on clinical grounds, a reason outlining why the particular test/s could not be conducted must be provided with the authority application [see Note for test requirements].

The maximum quantity authorised will be limited to provide sufficient supply for 1 month of treatment, based on the dosage recommendations in the TGA-approved Product Information. No repeats will be authorised for the first authority prescription issued under this criterion [see Note for full details of authority approval requirements]. A maximum of 4 repeats will be authorised for the second authority prescription issued under this criterion. Where fewer than 4 repeats are initially requested with the second authority prescription, authority approvals for sufficient repeats to complete a maximum of 6 months of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).

#### **Public and private hospital authority required**

##### **Initial (new adult patients)**

Application for initial PBS-subsidised treatment with bosentan monohydrate of adult patients who have not received prior PBS-subsidised treatment with iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium and who have been assessed by a physician from a designated hospital to have:

- (a) WHO Functional Class III primary pulmonary hypertension and a mean right atrial pressure greater than 8 mmHg, as measured by RHC, unless a RHC is contraindicated on clinical grounds; OR  
 (b) WHO Functional Class III pulmonary arterial hypertension secondary to scleroderma and a mean right atrial pressure greater than 8 mmHg, as measured by RHC, unless a RHC is contraindicated on clinical grounds; OR  
 (c) WHO Functional Class IV primary pulmonary hypertension; OR  
 (d) WHO Functional Class IV pulmonary arterial hypertension secondary to scleroderma.

In circumstances where a RHC cannot be performed on clinical grounds, applications may be submitted to Medicare Australia for consideration based on the test results of the ECHO composite assessment plus 6MWT or the ECHO composite assessment only.

#### **Public and private hospital authority required**

*Initial (new patients under 18 years of age)*

Application for initial PBS-subsidised treatment of patients aged less than 18 years who have not received prior PBS-subsidised treatment with epoprostenol sodium or sildenafil citrate and who have been assessed by a physician from a designated hospital to have:

WHO Functional Class III primary pulmonary hypertension and either a mean right atrial pressure of 8 mmHg or less, as measured by RHC, or, where a RHC cannot be performed on clinical grounds, normal right ventricular function as assessed by ECHO.

Patients must have failed to respond [see Note for definition of response] to 6 or more weeks of appropriate prior vasodilator treatment unless intolerance or a contraindication to such treatment exists.

*Applications for authorisation must be in writing and must include:*

- (1) two completed authority prescription forms [see Note for authority approval requirements]; and
- (2) a completed Pulmonary Arterial Hypertension PBS Authority Application - Supporting Information form [www.medicareaustralia.gov.au] which includes results from the 3 tests below, where available:

(i) RHC composite assessment; and

(ii) ECHO composite assessment; and

(iii) 6MWT; and

(3) a patient acknowledgment, signed by the parent or authorised guardian, indicating that they understand and acknowledge that PBS-subsidised treatment with bosentan monohydrate, epoprostenol sodium or sildenafil citrate for primary pulmonary hypertension will cease if the treating physician determines that the patient has not achieved a response to treatment [see Note for definition of response].

Details of prior vasodilator treatment, including the dose and duration of treatment, must be provided at the time of application. Where the patient has an adverse event to a vasodilator or where vasodilator treatment is contraindicated, details on the nature of the adverse event or contraindication according to the TGA-approved Product Information must also be provided with the application.

- (ii) ECHO composite assessment; and
- (iii) 6MWT; and

(3) a signed patient acknowledgment indicating that the patient understands and acknowledges that PBS-subsidised treatment with bosentan monohydrate for primary pulmonary hypertension, pulmonary arterial hypertension secondary to scleroderma, or pulmonary arterial hypertension associated with a congenital systemic-to-pulmonary shunt (including Eisenmenger's physiology), OR with iloprost trometamol for primary pulmonary hypertension, drug-induced pulmonary arterial hypertension or pulmonary arterial hypertension secondary to connective tissue disease, OR with epoprostenol sodium for primary pulmonary hypertension, OR with sildenafil citrate for primary pulmonary hypertension or pulmonary arterial hypertension secondary to connective tissue disease, OR with sitaxentan sodium for primary pulmonary hypertension or pulmonary arterial hypertension secondary to connective tissue disease, will cease if the treating physician determines that the patient has not achieved a response to treatment [see Note for definition of response].

In circumstances where a RHC cannot be performed on clinical grounds, applications may be submitted to Medicare Australia for consideration based on the test results of the ECHO composite assessment plus 6MWT or the ECHO composite assessment only.

Where fewer than 3 tests (see requirement 2 above) are able to be performed on clinical grounds, a reason outlining why the particular test/s could not be conducted must be provided with the authority application [see Note for test requirements].

The maximum quantity authorised will be limited to provide sufficient supply for 1 month of treatment, based on the dosage recommendations in the TGA-approved Product Information. The number of repeats authorised will be dependent on the duration of prior bosentan monohydrate therapy. Where patients have received less than 6 months of non-PBS-subsidised treatment with bosentan monohydrate, sufficient repeats to allow the patient to complete a total of 6 months of combined PBS-subsidised and non-PBS-subsidised therapy may be requested. Where patients have received 6 months or more of non-PBS-subsidised treatment with bosentan monohydrate, a maximum of 5 repeats may be requested. Where fewer than the maximum allowable number of repeats are requested at the time of application, authority approvals for the remainder of the allowable repeats may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).

#### **Public and private hospital authority required**

*Initial (change or re-commencement for adult patients)*

*Application for initial treatment with bosentan monohydrate of adult patients with either of the following:*

- (a) primary pulmonary hypertension or pulmonary arterial hypertension secondary to scleroderma who wish to re-commence PBS-subsidised bosentan monohydrate after a break in therapy and who have demonstrated a response to their most recent course of PBS-subsidised treatment with bosentan monohydrate; OR
- (b) primary pulmonary hypertension or pulmonary arterial hypertension secondary to scleroderma and whose most recent course of PBS-subsidised treatment was with iloprost trometamol, sildenafil citrate or sitaxentan sodium; OR
- (c) primary pulmonary hypertension and whose most recent course of PBS-subsidised treatment was with epoprostenol sodium.

*Applications for authorisation must be in writing and must include:*

- (1) two completed authority prescription forms [see Note for authority approval requirements]; and
- (2) a completed Pulmonary Arterial Hypertension PBS Authority Application - Supporting Information form [www.medicareaustralia.gov.au] which includes the results on which approval for the first application for PBS-subsidised bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium, whichever was initiated first, was granted; and
- (3) the date of the first application for PBS-subsidised treatment with bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium, whichever was initiated first; and
- (4) the results of the patient's response to treatment with their last course of PBS-subsidised bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium.

*The maximum quantity authorised will be limited to provide sufficient supply for 1 month of treatment, based on the dosage recommendations in the TGA-approved Product Information. No repeats will be authorised for the first authority prescription issued under this criterion [see Note for full details of authority approval requirements]. A maximum of 4 repeats will be authorised for the second authority prescription issued under this criterion. Where fewer than 4 repeats are initially requested with the second authority prescription, authority approvals for sufficient repeats to complete a maximum of 6 months of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

**Public and private hospital authority required**

*Initial (change or re-commencement for patients under 18 years of age)*

*Application for initial treatment with bosentan monohydrate of patients aged less than 18 years with either of the following:*

*(a) primary pulmonary hypertension who wish to re-commence PBS-subsidised bosentan monohydrate after a break in therapy and who have demonstrated a response to their most recent course of PBS-subsidised treatment with bosentan monohydrate; OR*

*(b) primary pulmonary hypertension and whose most recent course of PBS-subsidised treatment was with epoprostenol sodium or sildenafil citrate.*

*Applications for authorisation must be in writing and must include:*

*(1) two completed authority prescription forms [see Note for authority approval requirements]; and*

*(2) a completed Pulmonary Arterial Hypertension PBS Authority Application - Supporting Information form [www.medicareaustralia.gov.au] which includes the results on which approval for the first application for PBS-subsidised bosentan monohydrate, epoprostenol sodium or sildenafil citrate, whichever was initiated first, was granted; and*

*(3) the date of the first application for PBS-subsidised treatment with bosentan monohydrate, epoprostenol sodium or sildenafil citrate, whichever was initiated first; and*

*(4) the results of the patient's response to treatment with their last course of PBS-subsidised bosentan monohydrate, epoprostenol sodium or sildenafil citrate.*

*The maximum quantity authorised will be limited to provide sufficient supply for 1 month of treatment, based on the dosage recommendations in the TGA-approved Product Information. No repeats will be authorised for the first authority prescription issued under this criterion [see Note for full details of authority approval requirements]. A maximum of 4 repeats will be authorised for the second authority prescription issued under this criterion. Where fewer than 4 repeats are initially requested with the second authority prescription, authority approvals for sufficient repeats to complete a maximum of 6 months of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

**Public and private hospital authority required**

*Continuing treatment (all patients)*

*Continuing PBS-subsidised treatment with bosentan monohydrate of patients who have received approval for initial PBS-subsidised treatment with bosentan monohydrate and who have been assessed by a physician from a designated hospital to have achieved a response to their most recent course of bosentan monohydrate treatment [see Note for definition of response].*

*Applications for authorisation must be in writing and must include:*

*(1) a completed authority prescription form; and*

*(2) a completed Pulmonary Arterial Hypertension PBS Authority Application - Supporting Information form [www.medicareaustralia.gov.au] which includes results from the 3 tests below, where available:*

*(i) RHC composite assessment; and*

*(ii) ECHO composite assessment; and*

*(iii) 6MWT.*

*Where fewer than 3 tests (see requirement 2 above) are able to be performed on clinical grounds, a reason outlining why the particular test/s could not be conducted must be provided with the authority application [see Note for test requirements].*

*The maximum quantity authorised will be limited to provide sufficient supply for 1 month of treatment, based on the dosage recommendations in the TGA-approved Product Information. A maximum of 5 repeats will be authorised.*

**CINACALCET HYDROCHLORIDE****Private hospital authority required**

*Management, including initiation and stabilisation, by a nephrologist, of a patient with chronic kidney disease on dialysis who has sustained secondary hyperparathyroidism with iPTH of at least 50 pmol per L, not responding to conventional therapy.*

**NOTE:**

*During the titration phase, intact PTH should be monitored 4 weekly (measured at least 12 hours post dose) and dose titrated until an appropriate iPTH concentration is achieved. During the titration phase, approval will be limited to sufficient supply for 4 weeks treatment at a time, with doses between 30 and 180 mg per day according to the patient's response and tolerability.*

*During the maintenance phase, approval will be limited to provide sufficient quantity for 4 weeks treatment up to a maximum of 6 months supply for doses between 30 and 180 mg per day according to the patient's response and tolerability. Intact PTH should be monitored quarterly (measured at least 12 hours post dose) and dose adjusted as necessary to maintain an appropriate iPTH concentration.*

*"Sustained" means the abnormality was detected on at least 2 blood samples collected over a period of 2 to 4 months.*

**DARUNAVIR****Private hospital authority required**

*Treatment, in combination with other antiretroviral agents, and co-administered with 100 mg ritonavir twice daily, of HIV infection in an antiretroviral experienced patient with:*

*(a) evidence of HIV replication (viral load greater than 10,000 copies per mL); and/or*

*(b) CD4 cell counts of less than 500 per cubic millimetre.*

*A patient must have failed previous treatment with, or have resistance to, 3 different antiretroviral regimens which have included:*

*(i) at least 1 non-nucleoside reverse transcriptase inhibitor; and*

*(ii) at least 1 nucleoside reverse transcriptase inhibitor; and*

*(iii) at least 2 protease inhibitors.*

| <i>(3) have evidence of chronic suppurative lung disease (cough and sputum most days of the week, or greater than 3 respiratory tract infections of more than 2 weeks' duration in any 12 months, or objective evidence of obstructive airways disease);</i>                                                                                                                                                                                                                                                                          |                                                        |           |                          |                                   |    |
| <i>(4) are participating in a 4 week trial as detailed below or have achieved a 10% or greater improvement in FEV1 (compared to baseline established prior to dornase alfa treatment) after a 4 week trial.</i>                                                                                                                                                                                                                                                                                                                       |                                                        |           |                          |                                   |    |
| <i>In order for patients to be eligible for participation in the HSD program, the following conditions must be met:</i>                                                                                                                                                                                                                                                                                                                                                                                                               |                                                        |           |                          |                                   |    |
| <i>(1) Patients must be assessed at cystic fibrosis clinics/centres which are under the control of specialist respiratory physicians with experience and expertise in the management of cystic fibrosis and the prescribing of dornase alfa under the HSD program is limited to such physicians. If attendance at such units is not possible because of geographical isolation, management (including prescribing) may be by specialist physician or paediatrician in consultation with such a unit;</i>                              |                                                        |           |                          |                                   |    |
| <i>(2) The measurement of lung function is to be conducted by independent (other than the treating doctor) experienced personnel at established lung function testing laboratories, unless this is not possible because of geographical isolation;</i>                                                                                                                                                                                                                                                                                |                                                        |           |                          |                                   |    |
| <i>(3) Prior to dornase alfa therapy, a baseline measurement of FEV1 must be undertaken during a stable period of the disease;</i>                                                                                                                                                                                                                                                                                                                                                                                                    |                                                        |           |                          |                                   |    |
| <i>(4) Initial therapy is limited to 4 weeks' treatment with dornase alfa at a dose of 2.5 mg daily;</i>                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                        |           |                          |                                   |    |
| <i>(5) At or towards the end of the initial 4 weeks' trial, patients must be reassessed and a further FEV1 measurement be undertaken (single test under conditions as above). Patients who achieve a 10% or greater improvement in FEV1 (compared to baseline established prior to dornase alfa treatment) are eligible for continued subsidy under the HSD program at a dose of 2.5 mg daily;</i>                                                                                                                                    |                                                        |           |                          |                                   |    |
| <i>(6) Patients who fail to meet a 10% or greater improvement in FEV1 after the initial 4 weeks' treatment at a dose of 2.5 mg daily, may have 1 further trial in the next 12 months but not before 3 months after the initial trial;</i>                                                                                                                                                                                                                                                                                             |                                                        |           |                          |                                   |    |
| <i>(7) Following an initial 6 months' therapy, a global assessment must be undertaken involving the patient, the patient's family (in the case of paediatric patients) and the treating physician(s) to establish that all agree that dornase alfa treatment is continuing to produce worthwhile benefits. (Dornase alfa therapy should cease if there is not general agreement of benefit as there is always the possibility of harm from unnecessary use.) Further reassessments are to be undertaken at six-monthly intervals;</i> |                                                        |           |                          |                                   |    |
| <i>(8) Other aspects of treatment, such as physiotherapy, must be continued;</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                        |           |                          |                                   |    |
| <i>(9) Where there is documented evidence that a patient already receiving dornase alfa therapy would have met the criteria for subsidy (i.e. satisfied the criteria for the 4 week trial and achieved a 10% or greater improvement in FEV1) then the patient is eligible to continue treatment under the HSD program. Where such evidence is not available, patients will need to satisfy the initiation and continuation criteria as for new patients. (Four weeks is considered a suitable wash-out period).</i>                   |                                                        |           |                          |                                   |    |
| <b><u>NOTE:</u></b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                        |           |                          |                                   |    |
| <i>It is highly desirable that all patients be included in the national cystic fibrosis patient data-base.</i>                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                        |           |                          |                                   |    |

**Private hospital authority required**

*Patients with chronic hepatitis B who have failed lamivudine therapy and who satisfy all of the following criteria:*

*(1)(a) Repeatedly elevated serum ALT levels while on concurrent antihepadnaviral therapy of greater than or equal to 6 months duration in conjunction with documented chronic hepatitis B infection; or*

*(b) Repeatedly elevated HBV DNA levels one log greater than the nadir value or failure to achieve a 1 log reduction in HBV DNA within 3 months, whilst on previous antihepadnaviral therapy except in patients with evidence of poor compliance;*

*(2) Female patients of child-bearing age are not pregnant, not breast-feeding, and are using an effective form of contraception.*

*Persons with Child's class B or C cirrhosis (ascites, variceal bleeding, encephalopathy, albumin less than 30 g per L, bilirubin greater than 30 micromoles per L) should have their treatment discussed with a transplant unit prior to initiating therapy.*

**NOTE:**

*Patients should have undergone a liver biopsy at some point since initial diagnosis to obtain histological evidence of chronic hepatitis.*

*PBS-subsidised entecavir monohydrate must be used as monotherapy.*

#### **EPOPROSTENOL SODIUM**

##### **NOTE:**

Any queries concerning the arrangements to prescribe epoprostenol sodium may be directed to Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).

Written applications for authority to prescribe epoprostenol sodium should be forwarded to:

Medicare Australia

Prior Written Approval of Specialised Drugs

Reply Paid 9826

GPO Box 9826

HOBART TAS 7001

##### **NOTE:**

Epoprostenol sodium is not PBS-subsidised for patients with pulmonary hypertension secondary to interstitial lung disease associated with scleroderma, where the total lung capacity is less than 70% of that predicted.

Epoprostenol sodium is not PBS-subsidised when used in combination with PBS-subsidised bosentan monohydrate, PBS-subsidised iloprost trometamol, PBS-subsidised sildenafil citrate or PBS-subsidised sitaxentan sodium.

The following provides some explanatory notes regarding the availability of PBS-subsidised treatment with:

- (a) bosentan monohydrate, of primary pulmonary hypertension or pulmonary arterial hypertension secondary to scleroderma, in patients with disease of WHO Functional Class III or IV severity; AND
- (b) iloprost trometamol, of primary pulmonary hypertension, drug-induced pulmonary arterial hypertension or pulmonary arterial hypertension secondary to connective tissue disease, in patients with disease of WHO Functional Class III or IV severity; AND
- (c) epoprostenol sodium, of primary pulmonary hypertension, in patients with disease of WHO Functional Class III or IV severity; AND
- (d) sildenafil citrate, of primary pulmonary hypertension or pulmonary arterial hypertension secondary to connective tissue disease, in patients with disease of WHO Functional Class III severity; AND
- (e) sitaxentan sodium, of primary pulmonary hypertension or pulmonary arterial hypertension secondary to connective tissue disease, in patients with disease of WHO Functional Class III severity.

##### **Adult patients:**

From 1 April 2008, adult patients with primary pulmonary hypertension will be able to access, through the PBS, bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate (WHO Class III only) or sitaxentan sodium (WHO Class III only). Once these patients are approved initial treatment with 1 of these 5 drugs, they may swap between bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate and sitaxentan sodium at any time without having to re-qualify for treatment with the alternate agent. This means that patients may commence treatment with the alternate agent, subject to that agent's restriction, irrespective of the severity of their disease at the time the application to swap therapy is submitted. It also means that no new baseline measurements will be necessary. (New baselines may be submitted where the patient has failed to respond to their current treatment.)

Patients may only swap to bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium if they have not failed prior PBS-subsidised treatment with that drug.

*Adult patients with pulmonary arterial hypertension secondary to scleroderma will be able to access, through the PBS, bosentan monohydrate, iloprost trometamol, sildenafil citrate (WHO Class III only) or sitaxentan sodium (WHO Class III only). Once these patients are approved initial treatment with 1 of these 4 drugs, they may swap between bosentan monohydrate, iloprost trometamol, sildenafil citrate and sitaxentan sodium at any time without having to re-qualify for treatment with the alternate agent. This means that patients may commence treatment with the alternate agent, subject to that agent's restriction, irrespective of the severity of their disease at the time the application to swap therapy is submitted. It also means that no new baseline measurements will be necessary. (New baselines may be submitted where the patient has failed to respond to their current treatment.)*

*Patients may only swap to bosentan monohydrate, iloprost trometamol, sildenafil citrate or sitaxentan sodium if they have not failed prior PBS-subsidised treatment with that drug.*

*Adult patients with pulmonary arterial hypertension secondary to connective tissue disease other than scleroderma will be able to access, through the PBS, iloprost trometamol, sildenafil citrate (WHO Class III only) or sitaxentan sodium (WHO Class III only). Once these patients are approved initial treatment with 1 of these 3 drugs, they may swap between iloprost trometamol, sildenafil citrate and sitaxentan sodium at any time without having to re-qualify for treatment with the alternate agent. This means that patients may commence treatment with the alternate agent, subject to that agent's restriction, irrespective of the severity of their disease at the time the application to swap therapy is submitted. It also means that no new baseline measurements will be necessary. (New baselines may be submitted where the patient has failed to respond to their current treatment.)*

*Patients may only swap to iloprost trometamol, sildenafil citrate or sitaxentan sodium if they have not failed prior PBS-subsidised treatment with that drug.*

*Patients with drug-induced pulmonary arterial hypertension are only eligible for treatment with iloprost trometamol. They may not swap to bosentan monohydrate, epoprostenol sodium, sildenafil citrate or sitaxentan sodium.*

*Patients under 18 years of age:*

*From 1 April 2008, patients aged less than 18 years with primary pulmonary hypertension are eligible to receive PBS-subsidised treatment with bosentan monohydrate, epoprostenol sodium, iloprost trometamol, sildenafil citrate (WHO Class III only) or sitaxentan sodium (WHO Class III only). Once these patients are approved initial treatment with 1 of these 5 drugs, they may swap between bosentan monohydrate, epoprostenol sodium, iloprost trometamol, sildenafil citrate and sitaxentan sodium at any time without having to re-qualify for treatment with the alternate agent. This means that patients may commence treatment with the alternate agent, subject to that agent's restriction, irrespective of the severity of their disease at the time the application to swap therapy is submitted. It also means that no new baseline measurements will be necessary. (New baselines may be submitted where the patient has failed to respond to their current treatment.)*

*Patients may only swap to bosentan monohydrate, epoprostenol sodium, iloprost trometamol, sildenafil citrate or sitaxentan sodium if they have not failed prior PBS-subsidised treatment with that drug.*

**1. Definition of primary pulmonary hypertension, drug-induced pulmonary arterial hypertension or pulmonary arterial hypertension secondary to connective tissue disease, including scleroderma.**

**Primary pulmonary hypertension, drug-induced pulmonary arterial hypertension or pulmonary arterial hypertension secondary to connective tissue disease, including scleroderma, are defined as follows:**

- (i) mean pulmonary artery pressure (mPAP) greater than 25 mmHg at rest and pulmonary capillary wedge pressure (PCWP) less than 18 mmHg; or*
- (ii) mPAP greater than 30 mmHg with exercise and PCWP less than 18 mmHg; or*
- (iii) where a right heart catheter cannot be performed on clinical grounds, right ventricular systolic pressure (RVSP), assessed by echocardiography (ECHO), greater than 40 mmHg, with normal left ventricular function.*

**2. Definition of WHO Functional Class III or IV disease severity.**

*(a) WHO Functional Class III disease severity is defined as follows:*

*Patients with pulmonary hypertension resulting in marked limitation of physical activity who are comfortable at rest and on ordinary physical activity experience dyspnoea or fatigue, chest pain or near syncope.*

*(b) WHO Functional Class IV disease severity is defined as follows:*

*Patients with the inability to carry out any physical activity without symptoms. These patients manifest signs of right heart failure. Dyspnoea and/or fatigue may even be present at rest. Discomfort is increased by any physical activity.*

**3. Designated hospitals.**

| Code | Item and Section 100 Restriction | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

*Refer to the Medicare Australia website at [www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au) for a list of designated hospitals.*

**4. Test requirements to establish baseline for initiation of treatment and response to treatment for continuation of treatment.**

**(a) Initiation of treatment.**

*The first written application for PBS-subsidised treatment with the first of either bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium should be accompanied by the results of a right heart catheter (RHC) composite assessment, plus an echocardiograph (ECHO) composite assessment, plus a 6 minute walk test (6MWT) to establish the patient's baseline measurements.*

*Where it is not possible to perform all 3 tests above on clinical grounds, the following list outlines the preferred test combination, in descending order, for the purposes of initiation of PBS-subsidised treatment:*

- (1) RHC plus ECHO composite assessments;*
- (2) RHC composite assessment plus 6MWT;*
- (3) RHC composite assessment only.*

*In circumstances where a RHC cannot be performed on clinical grounds, applications may be submitted to Medicare Australia for consideration based on the results of the following test combinations, which are listed in descending order of preference:*

- (1) ECHO composite assessment plus 6MWT;*
- (2) ECHO composite assessment only.*

*Where fewer than 3 tests are able to be performed on clinical grounds, a reason outlining why the particular test/s could not be conducted must be provided with the authority application.*

**NOTE:**

*Where patients were initiated on PBS-subsidised treatment either with bosentan monohydrate on or after 1 March 2004, with iloprost trometamol on or after 1 April 2005, with epoprostenol sodium on or after 1 August 2006, with sildenafil citrate on or after 1 March 2007, with sitaxentan sodium on or after 1 April 2008, or with bosentan monohydrate (for PAH associated with congenital systemic-to-pulmonary shunt) on or after 1 August 2008, the test results provided with the initial application must be no more than 2 months old at the time of application. These results will form the baseline against which response assessments will be made.*

*Where patients received treatment with either bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium prior to being commenced on PBS-subsidised treatment with the first of either bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium, the test requirements above still apply. The results that will form the baseline against which response assessments will be made will be those measured at the time patients commenced non-PBS-subsidised treatment with either bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium, whichever of the 5 drugs the patient received first.*

**(b) Continuation of treatment.**

*The following list outlines the preferred test combination, in descending order, for the purposes of continuation of PBS-subsidised treatment:*

- (1) RHC plus ECHO composite assessments plus 6MWT;*
- (2) RHC plus ECHO composite assessments;*
- (3) RHC composite assessment plus 6MWT;*
- (4) ECHO composite assessment plus 6MWT;*
- (5) RHC composite assessment only;*
- (6) ECHO composite assessment only.*

*The results of the same tests as conducted at baseline should be provided with each written continuing treatment application (i.e. every 6 months), except for patients who were able to undergo all 3 tests at baseline, and whose subsequent ECHO and 6MWT results demonstrate disease stability or improvement, in which case RHC can be omitted. In all other patients, where the same test(s) conducted at baseline cannot be performed for assessment of response on clinical grounds, a reason why the test(s) could not be conducted must be provided with the application.*

*The test(s) results provided with the application for continuing treatment must be no more than 2 months old at the time of application.*

| Code | Item and Section 100 Restriction | Pack Size | Price ex Manufacturer \$ | Proprietary Name and Manufacturer |
|------|----------------------------------|-----------|--------------------------|-----------------------------------|
|------|----------------------------------|-----------|--------------------------|-----------------------------------|

**5. Definition of response to epoprostenol sodium, bosentan monohydrate, iloprost trometamol, sildenafil citrate, sitaxentan sodium or prior vasodilator treatment.**

*For adult patients with 2 or more baseline tests, response to treatment is defined as 2 or more tests demonstrating stability or improvement of disease, as assessed by a physician from a designated hospital.*

*For adult patients with a RHC composite assessment alone at baseline, response to treatment is defined as a RHC result demonstrating stability or improvement of disease, as assessed by a physician from a designated hospital.*

*For adult patients with an ECHO composite assessment alone at baseline, response to treatment is defined as an ECHO result demonstrating stability or improvement of disease, as assessed by a physician from a designated hospital.*

*For patients aged less than 18 years, response to treatment is defined as at least 1 of the baseline tests demonstrating stability or improvement of disease, as assessed by a physician from a designated hospital.*

**6. Authority approval requirements.** [The following 2 sections are only relevant to the PBS listing of epoprostenol sodium. The requirements specific to bosentan monohydrate, iloprost trometamol, sildenafil citrate and sitaxentan sodium are given in parts 6 and 7 of the NOTE included in the bosentan monohydrate, iloprost trometamol, sildenafil citrate and sitaxentan sodium Schedule entry respectively.]

*(a) Initiation of PBS-subsidised treatment with epoprostenol sodium, where the patient has not received prior PBS-subsidised treatment with bosentan monohydrate, iloprost trometamol, sildenafil citrate or sitaxentan sodium. All applications for initial treatment must be made in writing, must include an authority prescription and must be submitted to Medicare Australia for authorisation. The total duration of initial PBS-subsidised treatment that will be approved with this first written application is up to 6 months, based on the dosage recommendations in the TGA-approved Product Information.*

*(b) Continuation of treatment.*

*Written applications for continuing treatment must be submitted to Medicare Australia for authorisation every 6 months. Approvals will be limited to provide sufficient supply for up to a maximum of 6 months of treatment, based on the dosage recommendations in the TGA-approved Product Information.*

*Applications for continuing treatment will only be approved for patients who have currently demonstrated a response to treatment with epoprostenol sodium.*

*The assessment of the patient's response to the first and subsequent 6 month courses of treatment should be made following the preceding 5 months of treatment, in order to allow sufficient time for a response to be demonstrated. Applications for continuing treatment with epoprostenol sodium should be made prior to the completion of the 6 month treatment course to ensure continuity for those patients who respond to treatment, as assessed by the treating physician.*

*(c) Swapping between bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate and sitaxentan sodium.*

*For eligible patients, applications to swap between these 5 drugs must be made under the relevant initial treatment restriction. Patients should be assessed for response to the treatment they are ceasing at the time the application to swap therapy is being made. Patients who fail to demonstrate a response or for whom no assessment results are submitted with the application to swap therapy may not re-commence PBS-subsidised treatment with the drug they are ceasing.*

*It is important that patients are assessed for response to every course of treatment approved within the timeframes specified in the relevant restriction, in order to maximise the choice of treatment.*

*To avoid confusion, applications for patients who wish to swap to an alternate treatment should be accompanied by the previously approved authority prescription, or remaining repeats, for the treatment the patient is ceasing.*

*(d) Cessation of treatment.*

*Patients who fail to demonstrate a response to PBS-subsidised epoprostenol sodium treatment at the times where an assessment is required must cease PBS-subsidised epoprostenol sodium therapy.*

**7. Re-treatment with epoprostenol sodium.**

*Patients who do not respond to treatment are not eligible to receive further PBS-subsidised treatment with epoprostenol sodium under any circumstances.*

**8. Further information.**

*A tabulated representation of the above information and the restriction can be obtained from the Medicare Australia website at [www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au).*

### **Public and private hospital authority required**

#### ***Initial (new adult patients)***

*Application for initial PBS-subsidised treatment with epoprostenol sodium of adult patients who have not received prior PBS-subsidised treatment with bosentan monohydrate, iloprost trometamol, sildenafil citrate or sitaxentan sodium and who have been assessed by a physician from a designated hospital to have:*

*WHO Functional Class III primary pulmonary hypertension and a mean right atrial pressure of 8 mmHg or less, as measured by RHC, unless a RHC is contraindicated on clinical grounds.*

*Patients must have failed to respond [see Note for definition of response] to 6 or more weeks of appropriate vasodilator treatment unless intolerance or a contraindication to such treatment exists.*

*In circumstances where a RHC cannot be performed on clinical grounds, applications may be submitted to Medicare Australia for consideration based on the test results of the ECHO composite assessment plus 6MWT or the ECHO composite assessment only.*

*Applications for authorisation must be in writing and must include:*

*(1) a completed authority prescription form [see Note for authority approval requirements]; and  
(2) a completed Pulmonary Arterial Hypertension PBS Authority Application - Supporting Information form [www.medicareaustralia.gov.au] which includes results from the 3 tests below, where available:*

*(i) RHC composite assessment; and*

*(ii) ECHO composite assessment; and*

*(iii) 6MWT; and*

*(3) a signed patient acknowledgment indicating that the patient understands and acknowledges that PBS-subsidised treatment with epoprostenol sodium for primary pulmonary hypertension, OR with iloprost trometamol for primary pulmonary hypertension, drug-induced pulmonary arterial hypertension or pulmonary arterial hypertension secondary to connective tissue disease, OR with bosentan monohydrate for primary pulmonary hypertension or pulmonary arterial hypertension secondary to scleroderma, OR with sildenafil citrate for primary pulmonary hypertension or pulmonary arterial hypertension secondary to connective tissue disease, OR with sitaxentan sodium for primary pulmonary hypertension or pulmonary arterial hypertension secondary to connective tissue disease, will cease if the treating physician determines that the patient has not achieved a response to treatment [see Note for definition of response].*

*Details of prior vasodilator treatment, including the dose and duration of treatment, must be provided at the time of application. Where the patient has an adverse event to a vasodilator or where vasodilator treatment is contraindicated, details on the nature of the adverse event or contraindication according to the TGA-approved Product Information must also be provided with the application.*

*Where fewer than 3 tests (see requirement 2 above) are able to be performed on clinical grounds, a reason outlining why the particular test/s could not be conducted must be provided with the authority application [see Note for test requirements].*

*The maximum quantity authorised will be limited to provide sufficient supply for 1 month of treatment, based on the dosage recommendations in the TGA-approved Product Information. A maximum of 5 repeats may be requested. Where fewer than 5 repeats are requested at the time of application, authority approvals for sufficient repeats to complete a maximum of 6 months of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

### **Public and private hospital authority required**

#### ***Initial (new adult patients)***

*Application for initial PBS-subsidised treatment with epoprostenol sodium of adult patients who have not received prior PBS-subsidised treatment with bosentan monohydrate, iloprost trometamol, sildenafil citrate or sitaxentan sodium and who have been assessed by a physician from a designated hospital to have:*

*(a) WHO Functional Class III primary pulmonary hypertension and a mean right atrial pressure greater than 8 mmHg, as measured by RHC, unless a RHC is contraindicated on clinical grounds; OR*

*(b) WHO Functional Class IV primary pulmonary hypertension.*

*In circumstances where a RHC cannot be performed on clinical grounds, applications may be submitted to Medicare Australia for consideration based on the test results of the ECHO composite assessment plus 6MWT or the ECHO composite assessment only.*

| Code | Item and Section 100 Restriction | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

*Applications for authorisation must be in writing and must include:*

- (1) a completed authority prescription form [see Note for authority approval requirements]; and
- (2) a completed Pulmonary Arterial Hypertension PBS Authority Application - Supporting Information form [www.medicareaustralia.gov.au] which includes results from the 3 tests below, where available:

- (i) RHC composite assessment; and
- (ii) ECHO composite assessment; and
- (iii) 6MWT; and

(3) a signed patient acknowledgment indicating that the patient understands and acknowledges that PBS-subsidised treatment with epoprostenol sodium for primary pulmonary hypertension, OR with iloprost trometamol for primary pulmonary hypertension, drug-induced pulmonary arterial hypertension or pulmonary arterial hypertension secondary to connective tissue disease, OR with bosentan monohydrate for primary pulmonary hypertension or pulmonary arterial hypertension secondary to scleroderma, OR with sildenafil citrate for primary pulmonary hypertension or pulmonary arterial hypertension secondary to connective tissue disease, OR with sitaxentan sodium for primary pulmonary hypertension or pulmonary arterial hypertension secondary to connective tissue disease, will cease if the treating physician determines that the patient has not achieved a response to treatment [see Note for definition of response].

Where fewer than 3 tests (see requirement 2 above) are able to be performed on clinical grounds, a reason outlining why the particular test/s could not be conducted must be provided with the authority application [see Note for test requirements].

The maximum quantity authorised will be limited to provide sufficient supply for 1 month of treatment, based on the dosage recommendations in the TGA-approved Product Information. A maximum of 5 repeats may be requested. Where fewer than 5 repeats are requested at the time of application, authority approvals for sufficient repeats to complete a maximum of 6 months of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).

#### **Public and private hospital authority required**

*Initial (new patients under 18 years of age)*

Application for initial PBS-subsidised treatment of patients aged less than 18 years who have not received prior PBS-subsidised treatment with bosentan monohydrate or sildenafil citrate and who have been assessed by a physician from a designated hospital to have WHO Functional Class III primary pulmonary hypertension with a mean right atrial pressure of 8 mmHg or less, as measured by RHC, or, where a RHC cannot be performed on clinical grounds, normal right ventricular function as assessed by ECHO.

Patients must have failed to respond [see Note for definition of response] to 6 or more weeks of appropriate prior vasodilator treatment unless intolerance or a contraindication to such treatment exists.

*Applications for authorisation must be in writing and must include:*

- (1) a completed authority prescription form [see Note for authority approval requirements]; and
- (2) a completed Pulmonary Arterial Hypertension PBS Authority Application - Supporting Information form [www.medicareaustralia.gov.au] which includes results from the 3 tests below, where available:

- (i) RHC composite assessment; and
- (ii) ECHO composite assessment; and
- (iii) 6MWT; and

(3) a patient acknowledgment, signed by the parent or authorised guardian, indicating that they understand and acknowledge that PBS-subsidised treatment with epoprostenol sodium, bosentan monohydrate or sildenafil citrate for primary pulmonary hypertension will cease if the treating physician determines that the patient has not achieved a response to treatment [see Note for definition of response].

Details of prior vasodilator treatment, including the dose and duration of treatment, must be provided at the time of application. Where the patient has an adverse event to a vasodilator or where vasodilator treatment is contraindicated, details on the nature of the adverse event or contraindication according to the TGA-approved Product Information must also be provided with the application.

Where fewer than 3 tests (see requirement 2 above) are able to be performed on clinical grounds, a reason outlining why the particular test/s could not be conducted must be provided with the authority application [see Note for test requirements].

**Public and private hospital authority required**

*Initial (change or re-commencement for all adult patients)*

*Application for initial PBS-subsidised treatment with epoprostenol sodium of adult patients with either of the following:*

- (a) primary pulmonary hypertension who wish to re-commence PBS-subsidised epoprostenol sodium after a break in therapy and who have demonstrated a response to their most recent course of PBS-subsidised treatment with epoprostenol sodium; OR*
- (b) primary pulmonary hypertension and whose most recent course of PBS-subsidised treatment was with bosentan monohydrate, iloprost trometamol, sildenafil citrate or sitaxentan sodium.*

*Applications for authorisation must be in writing and must include:*

- (1) a completed authority prescription form [see Note for authority approval requirements]; and*
- (2) a completed Pulmonary Arterial Hypertension PBS Authority Application - Supporting Information form [www.medicareaustralia.gov.au] which includes the results on which approval for the first application for PBS-subsidised epoprostenol sodium, iloprost trometamol, bosentan monohydrate, sildenafil citrate or sitaxentan sodium, whichever was initiated first, was granted; and*
- (3) the date of the first application for PBS-subsidised treatment with epoprostenol sodium, iloprost trometamol, bosentan monohydrate, sildenafil citrate or sitaxentan sodium, whichever was initiated first; and*
- (4) the results of the patient's response to treatment with their last course of PBS-subsidised epoprostenol sodium, iloprost trometamol, bosentan monohydrate, sildenafil citrate or sitaxentan sodium.*

| Code                                                                                          | Item and Section 100 Restriction                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Pack Size | Price ex Manufacturer \$ | Proprietary Name and Manufacturer |    |

**ETANERCEPT****NOTE:**

Any queries concerning the arrangements to prescribe etanercept may be directed to Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).

Written applications for authority to prescribe etanercept should be forwarded to:

Medicare Australia

Prior Written Approval of Specialised Drugs

Reply Paid 9826

GPO Box 9826

HOBART TAS 7001

Further prescribing information is on the Medicare Australia website at [www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au).

**Public and private hospital authority required**

Initial treatment by a paediatric rheumatologist, or under the supervision of a paediatric rheumatology treatment centre, of patients under 18 years who have severe active polyarticular course juvenile chronic arthritis; AND

(a) whose parent or authorised guardian has signed a patient agreement form indicating that they understand and acknowledge that PBS-subsidised treatment will cease if the predetermined response criteria do not support continuation of PBS-subsidised treatment; AND

(b) who have demonstrated either:

(i) severe intolerance of, or toxicity due to, methotrexate (see below for definition of severe intolerance and toxicity); or

(ii) failure to achieve an adequate response to 1 or more of the following treatment regimens:

— oral or parenteral methotrexate at a dose of at least 20 mg per square metre weekly, alone or in combination with oral or intra-articular corticosteroids, for a minimum of 3 months; or

— oral methotrexate at a dose of at least 10 mg per square metre weekly together with at least 1 other DMARD, alone or in combination with corticosteroids, for a minimum of 3 months. (Note: use of alternative DMARDs in children is dependent on approval by the Therapeutic Goods Administration as age restrictions may apply.)

Severe intolerance is defined as intractable nausea and vomiting and general malaise unresponsive to manoeuvres, including reducing or omitting concomitant NSAIDs on the day of methotrexate administration, use of folic acid supplementation, or administering the dose of methotrexate in 2 divided doses over 24 hours.

Toxicity is defined as evidence of hepatotoxicity with repeated elevations of transaminases, bone marrow suppression temporally related to methotrexate use, pneumonitis, or serious sepsis.

The following criteria must be met in order to demonstrate failure to achieve an adequate response to either of the above treatment regimens:

(a) an active joint count of at least 20 active (swollen and tender) joints; OR

(b) at least 4 active joints from the following list:

(i) elbow, wrist, knee and/or ankle (assessed as swollen and tender); and/or

(ii) shoulder, cervical spine and/or hip (assessed as pain in passive movement and restriction of passive movement, where pain and limitation of movement are due to active disease and not irreversible damage such as joint destruction or bony overgrowth).

If treatment with methotrexate alone or in combination with another DMARD is contraindicated according to the relevant TGA-approved Product Information, or intolerance develops during the period of use such that permanent withdrawal is necessary and a suitably effective treatment regimen cannot be implemented, this exempts the requirement to demonstrate an inadequate response within the time period specified above for these agents.

The authority application must be in writing and must include the information used to determine the patient's eligibility under the criteria above. The date of the joint assessment must be provided.

Only 16 weeks of treatment will be approved. The assessment of the patient's response to initial treatment should be made after at least 12 weeks of treatment so that there is adequate time for a response to be demonstrated.

**Public and private hospital authority required**

*Continuing PBS-subsidised treatment by a rheumatologist, or under the supervision of a paediatric rheumatology treatment centre, of severe active polyarticular course juvenile chronic arthritis in patients 18 years or older who have demonstrated an adequate response to treatment with etanercept as manifested by:*

- (a) an active joint count of fewer than 10 active (swollen and tender) joints; OR*
- (b) a reduction in the active (swollen and tender) joint count by at least 50% from baseline; OR*
- (c) a reduction in the number of the following active joints, from at least 4, by at least 50%:*
  - (i) elbow, wrist, knee and/or ankle (assessed as swollen and tender); and/or*
  - (ii) shoulder, cervical spine and/or hip (assessed as pain in passive movement and restriction of passive movement, where pain and limitation of movement are due to active disease and not irreversible damage such as joint destruction or bony overgrowth).*

*All authority applications for continuing treatment with etanercept must be in writing and must include sufficient information to determine the patient's response according to the above criteria. The date of the joint assessment must be provided.*

*Only 6 months of treatment per application will be approved. Applications for continuing treatment with etanercept should be made prior to the completion of 16 weeks of treatment to ensure continuity for those patients who meet the criteria.*

*Patients who fail to demonstrate an adequate response, as specified in the criteria for continuing treatment with etanercept, will not be eligible to recommence treatment with etanercept within 12 months of the date on which treatment was ceased.*

*Withdrawal of treatment with etanercept should be considered in patients who have achieved and sustained complete remission of disease for 12 months. Subsequent applications for PBS-subsidised re-treatment with etanercept will be subject to the authority conditions applying to initial treatment and will not be authorised within 12 months of the date on which treatment with etanercept was ceased.*

*Where re-treatment with etanercept after a break in PBS-subsidised treatment with the drug is being sought, the reason for and date of cessation of the previous treatment course with etanercept must be included in the application.*

*Where a patient with severe active polyarticular course juvenile chronic arthritis continues treatment with etanercept and is 18 years or older, etanercept 50 mg may be prescribed.*

**EVEROLIMUS**

**CAUTION:**

Careful monitoring of patients is mandatory.

**Private hospital authority required**

*Management of rejection, under the supervision and direction of a transplant unit, in patients receiving this drug for:*

- (a) prophylaxis of renal allograft rejection. Management includes initiation, stabilisation and review of therapy as required; or*
- (b) prophylaxis of cardiac allograft rejection. Management includes initiation, stabilisation and review of therapy as required.*

## FILGRASTIM

### Private hospital authority required

*For use in a patient undergoing induction and consolidation therapy for acute myeloid leukaemia;*

*Mobilisation of peripheral blood progenitor cells to facilitate harvest of such cells for autologous transplantation into a patient with a non-myeloid malignancy who has had myeloablative or myelosuppressive therapy;*

*Mobilisation of peripheral blood progenitor cells, in a normal volunteer, for use in allogeneic transplantation;*

*A patient receiving marrow-ablative chemotherapy and subsequent bone marrow transplantation;*

*A patient with a non-myeloid malignancy receiving marrow-ablative chemotherapy and subsequent autologous peripheral blood progenitor cell transplantation;*

*A patient with breast cancer receiving standard dose adjuvant chemotherapy who has had a prior episode of febrile neutropenia or prolonged severe neutropenia (neutrophil count of less than 1,000 million cells per litre), and for whom there is clinical justification for wishing to continue therapy with the same drug combination, dosage and treatment schedule, and for whom a good response to treatment is anticipated providing chemotherapy can be delivered as planned;*

*A patient receiving first-line chemotherapy for Hodgkin disease who has had a prior episode of febrile neutropenia or prolonged severe neutropenia (neutrophil count of less than 1,000 million cells per litre), and for whom there is clinical justification for wishing to continue therapy with the same drug combination, dosage and treatment schedule, and for whom a good response to treatment is anticipated providing chemotherapy can be delivered as planned;*

*A patient receiving chemotherapy for myeloma who has had a prior episode of febrile neutropenia, and for whom there is clinical justification for wishing to continue therapy with the same drug combination, dosage and treatment schedule, and for whom a good response to treatment is anticipated providing chemotherapy can be delivered as planned;*

*A patient with severe congenital neutropenia (absolute neutrophil count of less than 100 million cells per litre measured on 3 occasions, with readings at least 2 weeks apart, and in whom a bone marrow examination has shown evidence of maturational arrest of the neutrophil lineage);*

*A patient with severe chronic neutropenia (absolute neutrophil count of less than 1,000 million cells per litre measured on 3 occasions, with readings at least 2 weeks apart, or evidence of neutrophil dysfunction, and, either having experienced a life-threatening infectious episode requiring hospitalisation and treatment with intravenous antibiotics in the previous 12 months, or having recurrent clinically significant infections (a minimum of 3 in the previous 12 months));*

*A patient with chronic cyclic neutropenia (absolute neutrophil count of less than 500 million cells per litre lasting for 3 days per cycle, measured over 3 separate cycles, and, either having experienced a life-threatening infectious episode requiring hospitalisation and treatment with intravenous antibiotics, or having recurrent clinically significant infections (a minimum of 3 in the previous 12 months)).*

### Private hospital authority required

*A patient being treated with aggressive chemotherapy with the intention of achieving a cure or substantial remission in:*

- (a) acute lymphoblastic leukaemia; or*
- (b) breast cancer (adjuvant chemotherapy with docetaxel in combination with an anthracycline and cyclophosphamide); or*
- (c) germ cell tumours; or*
- (d) infants and children with CNS tumours; or*
- (e) neuroblastoma; or*
- (f) non-Hodgkin lymphoma (aggressive grades; or low grade receiving an anthracycline-containing regimen); or*
- (g) relapsed Hodgkin disease; or*
- (h) sarcoma.*

**Medicare Australia**

**Prior Written Approval of Specialised Drugs**

**Reply Paid 9826**

**GPO Box 9826**

**HOBART TAS 7001**

**NOTE:**

*Iloprost trometamol is not PBS-subsidised for patients with pulmonary hypertension secondary to interstitial lung disease associated with scleroderma, where the total lung capacity is less than 70% of that predicted.*

*Iloprost trometamol is not PBS-subsidised when used in combination with PBS-subsidised bosentan monohydrate, PBS-subsidised epoprostenol sodium, PBS-subsidised sildenafil citrate or PBS-subsidised sitaxentan sodium.*

*The following provides some explanatory notes regarding the availability of PBS-subsidised treatment with:*

- (a) bosentan monohydrate, of primary pulmonary hypertension or pulmonary arterial hypertension secondary to scleroderma, in patients with disease of WHO Functional Class III or IV severity; AND*
- (b) iloprost trometamol, of primary pulmonary hypertension, drug-induced pulmonary arterial hypertension or pulmonary arterial hypertension secondary to connective tissue disease, in patients with disease of WHO Functional Class III or IV severity; AND*
- (c) epoprostenol sodium, of primary pulmonary hypertension, in patients with disease of WHO Functional Class III or IV severity; AND*
- (d) sildenafil citrate, of primary pulmonary hypertension or pulmonary arterial hypertension secondary to connective tissue disease, in patients with disease of WHO Functional Class III severity; AND*
- (e) sitaxentan sodium, of primary pulmonary hypertension or pulmonary arterial hypertension secondary to connective tissue disease, in patients with disease of WHO Functional Class III severity.*

**Adult patients:**

*From 1 April 2008, adult patients with primary pulmonary hypertension will be able to access, through the PBS, bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate (WHO Class III only) or sitaxentan sodium (WHO Class III only). Once these patients are approved initial treatment with 1 of these 5 drugs, they may swap between bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate and sitaxentan sodium at any time without having to re-qualify for treatment with the alternate agent. This means that patients may commence treatment with the alternate agent, subject to that agent's restriction, irrespective of the severity of their disease at the time the application to swap therapy is submitted. It also means that no new baseline measurements will be necessary. (New baselines may be submitted where the patient has failed to respond to their current treatment.)*

*Patients may only swap to bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium if they have not failed prior PBS-subsidised treatment with that drug.*

*Adult patients with pulmonary arterial hypertension secondary to scleroderma will be able to access, through the PBS, bosentan monohydrate, iloprost trometamol, sildenafil citrate (WHO Class III only) or sitaxentan sodium (WHO Class III only). Once these patients are approved initial treatment with 1 of these 4 drugs, they may swap between bosentan monohydrate, iloprost trometamol, sildenafil citrate and sitaxentan sodium at any time without having to re-qualify for treatment with the alternate agent. This means that patients may commence treatment with the alternate agent, subject to that agent's restriction, irrespective of the severity of their disease at the time the application to swap therapy is submitted. It also means that no new baseline measurements will be necessary. (New baselines may be submitted where the patient has failed to respond to their current treatment.)*

*Patients may only swap to bosentan monohydrate, iloprost trometamol, sildenafil citrate or sitaxentan sodium if they have not failed prior PBS-subsidised treatment with that drug.*

*Adult patients with pulmonary arterial hypertension secondary to connective tissue disease other than scleroderma will be able to access, through the PBS, iloprost trometamol, sildenafil citrate (WHO Class III only) or sitaxentan sodium (WHO Class III only). Once these patients are approved initial treatment with 1 of these 3 drugs, they may swap between iloprost trometamol, sildenafil citrate and sitaxentan sodium at any time without having to re-qualify for treatment with the alternate agent. This means that patients may commence treatment with the alternate agent, subject to that agent's restriction, irrespective of the severity of their disease at the time the application to swap therapy is submitted. It also means that no new baseline measurements will be necessary. (New baselines may be submitted where the patient has failed to respond to their current treatment.)*

| Code | Item and Section 100 Restriction | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

*Patients may only swap to iloprost trometamol, sildenafil citrate or sitaxentan sodium if they have not failed prior PBS-subsidised treatment with that drug.*

*Patients with drug-induced pulmonary arterial hypertension are only eligible for treatment with iloprost trometamol. They may not swap to bosentan monohydrate, epoprostenol sodium, sildenafil citrate or sitaxentan sodium.*

*Patients under 18 years of age:*

*From 1 April 2008, patients aged less than 18 years with primary pulmonary hypertension are eligible to receive PBS-subsidised treatment with bosentan monohydrate, epoprostenol sodium, iloprost trometamol, sildenafil citrate (WHO Class III only) or sitaxentan sodium (WHO Class III only). Once these patients are approved initial treatment with 1 of these 5 drugs, they may swap between bosentan monohydrate, epoprostenol sodium, iloprost trometamol, sildenafil citrate and sitaxentan sodium at any time without having to re-qualify for treatment with the alternate agent. This means that patients may commence treatment with the alternate agent, subject to that agent's restriction, irrespective of the severity of their disease at the time the application to swap therapy is submitted. It also means that no new baseline measurements will be necessary. (New baselines may be submitted where the patient has failed to respond to their current treatment.)*

*Patients may only swap to bosentan monohydrate, epoprostenol sodium, iloprost trometamol, sildenafil citrate or sitaxentan sodium if they have not failed prior PBS-subsidised treatment with that drug.*

**1. Definition of primary pulmonary hypertension, drug-induced pulmonary arterial hypertension or pulmonary arterial hypertension secondary to connective tissue disease, including scleroderma.**

*Primary pulmonary hypertension, drug-induced pulmonary arterial hypertension or pulmonary arterial hypertension secondary to connective tissue disease, including scleroderma, are defined as follows:*

- (i) mean pulmonary artery pressure (mPAP) greater than 25 mmHg at rest and pulmonary capillary wedge pressure (PCWP) less than 18 mmHg; or*
- (ii) mPAP greater than 30 mmHg with exercise and PCWP less than 18 mmHg; or*
- (iii) where a right heart catheter cannot be performed on clinical grounds, right ventricular systolic pressure (RVSP), assessed by echocardiography (ECHO), greater than 40 mmHg, with normal left ventricular function.*

**2. Definition of WHO Functional Class III or IV disease severity.**

*(a) WHO Functional Class III disease severity is defined as follows:*

*Patients with pulmonary hypertension resulting in marked limitation of physical activity who are comfortable at rest and on ordinary physical activity experience dyspnoea or fatigue, chest pain or near syncope.*

*(b) WHO Functional Class IV disease severity is defined as follows:*

*Patients with the inability to carry out any physical activity without symptoms. These patients manifest signs of right heart failure. Dyspnoea and/or fatigue may even be present at rest. Discomfort is increased by any physical activity.*

**3. Designated hospitals.**

*Refer to the Medicare Australia website at [www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au) for a list of designated hospitals.*

**4. Test requirements to establish baseline for initiation of treatment and response to treatment for continuation of treatment.**

*(a) Initiation of treatment.*

*The first written application for PBS-subsidised treatment with the first of either bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium should be accompanied by the results of a right heart catheter (RHC) composite assessment, plus an echocardiograph (ECHO) composite assessment, plus a 6 minute walk test (6MWT) to establish the patient's baseline measurements.*

*Where it is not possible to perform all 3 tests above on clinical grounds, the following list outlines the preferred test combination, in descending order, for the purposes of initiation of PBS-subsidised treatment:*

- (1) RHC plus ECHO composite assessments;*
- (2) RHC composite assessment plus 6MWT;*
- (3) RHC composite assessment only.*

| Code | Item and Section 100 Restriction | Pack Size | Price ex Manufacturer \$ | Proprietary Name and Manufacturer |
|------|----------------------------------|-----------|--------------------------|-----------------------------------|
|------|----------------------------------|-----------|--------------------------|-----------------------------------|

*In circumstances where a RHC cannot be performed on clinical grounds, applications may be submitted to Medicare Australia for consideration based on the results of the following test combinations, which are listed in descending order of preference:*

- (1) ECHO composite assessment plus 6MWT;*
- (2) ECHO composite assessment only.*

*Where fewer than 3 tests are able to be performed on clinical grounds, a reason outlining why the particular test/s could not be conducted must be provided with the authority application.*

**NOTE:**

*Where patients were initiated on PBS-subsidised treatment either with bosentan monohydrate on or after 1 March 2004, with iloprost trometamol on or after 1 April 2005, with epoprostenol sodium on or after 1 August 2006, with sildenafil citrate on or after 1 March 2007, with sitaxentan sodium on or after 1 April 2008, or with bosentan monohydrate (for PAH associated with congenital systemic-to-pulmonary shunt) on or after 1 August 2008, the test results provided with the initial application must be no more than 2 months old at the time of application. These results will form the baseline against which response assessments will be made.*

*Where patients received treatment with either bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium prior to being commenced on PBS-subsidised treatment with the first of either bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium, the test requirements above still apply. The results that will form the baseline against which response assessments will be made will be those measured at the time patients commenced non-PBS-subsidised treatment with either bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate or sitaxentan sodium, whichever of the 5 drugs the patient received first.*

**(b) Continuation of treatment.**

*The following list outlines the preferred test combination, in descending order, for the purposes of continuation of PBS-subsidised treatment:*

- (1) RHC plus ECHO composite assessments plus 6MWT;*
- (2) RHC plus ECHO composite assessments;*
- (3) RHC composite assessment plus 6MWT;*
- (4) ECHO composite assessment plus 6MWT;*
- (5) RHC composite assessment only;*
- (6) ECHO composite assessment only.*

*The results of the same tests as conducted at baseline should be provided with each written continuing treatment application (i.e. every 6 months), except for patients who were able to undergo all 3 tests at baseline, and whose subsequent ECHO and 6MWT results demonstrate disease stability or improvement, in which case RHC can be omitted. In all other patients, where the same test(s) conducted at baseline cannot be performed for assessment of response on clinical grounds, a reason why the test(s) could not be conducted must be provided with the application.*

*The test(s) results provided with the application for continuing treatment must be no more than 2 months old at the time of application.*

**5. Definition of response to iloprost trometamol, bosentan monohydrate, epoprostenol sodium, sildenafil citrate, sitaxentan sodium or prior vasodilator treatment.**

*For adult patients with 2 or more baseline tests, response to treatment is defined as 2 or more tests demonstrating stability or improvement of disease, as assessed by a physician from a designated hospital.*

*For adult patients with a RHC composite assessment alone at baseline, response to treatment is defined as a RHC result demonstrating stability or improvement of disease, as assessed by a physician from a designated hospital.*

*For adult patients with an ECHO composite assessment alone at baseline, response to treatment is defined as an ECHO result demonstrating stability or improvement of disease, as assessed by a physician from a designated hospital.*

**6. Authority approval requirements.** *[The following 2 sections are only relevant to the PBS listing of iloprost trometamol. The requirements specific to bosentan monohydrate, epoprostenol sodium, sildenafil citrate and sitaxentan sodium are given in parts 6 and 7 of the NOTE included in the bosentan monohydrate, epoprostenol sodium, sildenafil citrate and sitaxentan sodium Schedule entry respectively.]*

| Code | Item and Section 100 Restriction | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

(a) *Initiation of PBS-subsidised treatment with iloprost trometamol, where the patient has not received prior PBS-subsidised treatment with bosentan monohydrate, epoprostenol sodium, sildenafil citrate or sitaxentan sodium. All applications for initial treatment must be made in writing, must include an authority prescription and must be submitted to Medicare Australia for authorisation. The total duration of initial PBS-subsidised treatment that will be approved with this first written application is up to 6 months, based on the dosage recommendations in the TGA-approved Product Information.*

(b) *Continuation of treatment.*

*Written applications for continuing treatment must be submitted to Medicare Australia for authorisation every 6 months. Approvals will be limited to provide sufficient supply for up to a maximum of 6 months of treatment, based on the dosage recommendations in the TGA-approved Product Information.*

*Applications for continuing treatment will only be approved for patients who have currently demonstrated a response to treatment with iloprost trometamol.*

*The assessment of the patient's response to the first and subsequent 6 month courses of treatment should be made following the preceding 5 months of treatment, in order to allow sufficient time for a response to be demonstrated. Applications for continuing treatment with iloprost trometamol should be made prior to the completion of the 6 month treatment course to ensure continuity for those patients who respond to treatment, as assessed by the treating physician.*

(c) *Swapping between bosentan monohydrate, iloprost trometamol, epoprostenol sodium, sildenafil citrate and sitaxentan sodium.*

*For eligible patients, applications to swap between these 5 drugs must be made under the relevant initial treatment restriction. Patients should be assessed for response to the treatment they are ceasing at the time the application to swap therapy is being made. Patients who fail to demonstrate a response or for whom no assessment results are submitted with the application to swap therapy may not re-commence PBS-subsidised treatment with the drug they are ceasing.*

*It is important that patients are assessed for response to every course of treatment approved within the timeframes specified in the relevant restriction, in order to maximise the choice of treatment.*

*To avoid confusion, applications for patients who wish to swap to an alternate treatment should be accompanied by the previously approved authority prescription, or remaining repeats, for the treatment the patient is ceasing.*

(d) *Cessation of treatment.*

*Patients who fail to demonstrate a response to PBS-subsidised iloprost trometamol treatment at the times where an assessment is required must cease PBS-subsidised iloprost trometamol therapy.*

#### **7. Re-treatment with iloprost trometamol.**

*Patients who do not respond to treatment are not eligible to receive further PBS-subsidised treatment with iloprost trometamol under any circumstances.*

#### **8. Further information.**

*A tabulated representation of the above information and the restriction can be obtained from the Medicare Australia website at [www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au).*

#### **Public and private hospital authority required**

##### ***Initial (new patients)***

*Application for initial PBS-subsidised treatment with iloprost trometamol of patients who have not received prior PBS-subsidised treatment with bosentan monohydrate, epoprostenol sodium, sildenafil citrate or sitaxentan sodium and who have been assessed by a physician from a designated hospital to have:*

*(a) WHO Functional Class III primary pulmonary hypertension and a mean right atrial pressure of 8 mmHg or less, as measured by RHC, unless a RHC is contraindicated on clinical grounds; OR*

*(b) WHO Functional Class III pulmonary arterial hypertension secondary to connective tissue disease and a mean right atrial pressure of 8 mmHg or less, as measured by RHC, unless a RHC is contraindicated on clinical grounds; OR*

*(c) WHO Functional Class III drug-induced pulmonary arterial hypertension and a mean right atrial pressure of 8 mmHg or less, as measured by RHC, unless a RHC is contraindicated on clinical grounds.*

*Patients must have failed to respond [see Note for definition of response] to 6 or more weeks of appropriate vasodilator treatment unless intolerance or a contraindication to such treatment exists.*

| Code | Item and Section 100 Restriction | Pack Size | Price ex Manufacturer \$ | Proprietary Name and Manufacturer |
|------|----------------------------------|-----------|--------------------------|-----------------------------------|
|------|----------------------------------|-----------|--------------------------|-----------------------------------|

*In circumstances where a RHC cannot be performed on clinical grounds, applications may be submitted to Medicare Australia for consideration based on the test results of the ECHO composite assessment plus 6MWT or the ECHO composite assessment only.*

*Applications for authorisation must be in writing and must include:*

*(1) a completed authority prescription form [see Note for authority approval requirements]; and*

*(2) a completed Pulmonary Arterial Hypertension PBS Authority Application - Supporting Information form [www.medicareaustralia.gov.au] which includes results from the 3 tests below, where available:*

*(i) RHC composite assessment; and*

*(ii) ECHO composite assessment; and*

*(iii) 6MWT; and*

*(3) a signed patient acknowledgment indicating that the patient understands and acknowledges that PBS-subsidised treatment with iloprost trometamol for primary pulmonary hypertension, drug-induced pulmonary arterial hypertension or pulmonary arterial hypertension secondary to connective tissue disease, OR with bosentan monohydrate for primary pulmonary hypertension or pulmonary arterial hypertension secondary to scleroderma, OR with epoprostenol sodium for primary pulmonary hypertension, OR with sildenafil citrate for primary pulmonary hypertension or pulmonary arterial hypertension secondary to connective tissue disease, OR with sitaxentan sodium for primary pulmonary hypertension or pulmonary arterial hypertension secondary to connective tissue disease, will cease if the treating physician determines that the patient has not achieved a response to treatment [see Note for definition of response].*

*Details of prior vasodilator treatment, including the dose and duration of treatment, must be provided at the time of application. Where the patient has an adverse event to a vasodilator or where vasodilator treatment is contraindicated, details on the nature of the adverse event or contraindication according to the TGA-approved Product Information must also be provided with the application.*

*Where fewer than 3 tests (see requirement 2 above) are able to be performed on clinical grounds, a reason outlining why the particular test/s could not be conducted must be provided with the authority application [see Note for test requirements].*

*The maximum quantity authorised will be limited to provide sufficient supply for 1 month of treatment, based on the dosage recommendations in the TGA-approved Product Information. A maximum of 5 repeats may be requested. Where fewer than 5 repeats are requested at the time of application, authority approvals for sufficient repeats to complete a maximum of 6 months of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

#### **Public and private hospital authority required**

##### **Initial (new patients)**

*Application for initial PBS-subsidised treatment with iloprost trometamol of patients who have not received prior PBS-subsidised treatment with bosentan monohydrate, epoprostenol sodium, sildenafil citrate or sitaxentan sodium and who have been assessed by a physician from a designated hospital to have:*

*(a) WHO Functional Class III primary pulmonary hypertension and a mean right atrial pressure greater than 8 mmHg, as measured by RHC, unless a RHC is contraindicated on clinical grounds; OR*

*(b) WHO Functional Class III pulmonary arterial hypertension secondary to connective tissue disease and a mean right atrial pressure greater than 8 mmHg, as measured by RHC, unless a RHC is contraindicated on clinical grounds; OR*

*(c) WHO Functional Class III drug-induced pulmonary arterial hypertension and a mean right atrial pressure greater than 8 mmHg, as measured by RHC, unless a RHC is contraindicated on clinical grounds; OR*

*(d) WHO Functional Class IV primary pulmonary hypertension; OR*

*(e) WHO Functional Class IV pulmonary arterial hypertension secondary to connective tissue disease; OR*

*(f) WHO Functional Class IV drug-induced pulmonary arterial hypertension.*

*In circumstances where a RHC cannot be performed on clinical grounds, applications may be submitted to Medicare Australia for consideration based on the test results of the ECHO composite assessment plus 6MWT or the ECHO composite assessment only.*

#### **Public and private hospital authority required**

*Initial (change or re-commencement for all patients)*

*Application for initial PBS-subsidised treatment with iloprost trometamol of patients with either of the following:*

- (a) primary pulmonary hypertension, drug-induced pulmonary arterial hypertension or pulmonary arterial hypertension secondary to connective tissue disease who wish to re-commence PBS-subsidised iloprost trometamol after a break in therapy and who have demonstrated a response to their most recent course of PBS-subsidised treatment with iloprost trometamol; OR
- (b) primary pulmonary hypertension or pulmonary arterial hypertension secondary to scleroderma and whose most recent course of PBS-subsidised treatment was with bosentan monohydrate; OR
- (c) primary pulmonary hypertension and whose most recent course of PBS-subsidised treatment was with epoprostenol sodium; OR
- (d) primary pulmonary hypertension or pulmonary arterial hypertension secondary to connective tissue disease and whose most recent course of PBS-subsidised treatment was with sildenafil citrate; OR
- (e) primary pulmonary hypertension or pulmonary arterial hypertension secondary to connective tissue disease and whose most recent course of PBS-subsidised treatment was with sitaxentan sodium.

*Applications for authorisation must be in writing and must include:*

- (1) a completed authority prescription form [see Note for authority approval requirements]; and
- (2) a completed Pulmonary Arterial Hypertension PBS Authority Application - Supporting Information form [www.medicareaustralia.gov.au] which includes the results on which approval for the first application for PBS-subsidised iloprost trometamol, bosentan monohydrate, epoprostenol sodium, sildenafil citrate or sitaxentan sodium, whichever was initiated first, was granted; and
- (3) the date of the first application for PBS-subsidised treatment with iloprost trometamol, bosentan monohydrate, epoprostenol sodium, sildenafil citrate or sitaxentan sodium, whichever was initiated first; and
- (4) the results of the patient's response to treatment with their last course of PBS-subsidised iloprost trometamol, bosentan monohydrate, epoprostenol sodium, sildenafil citrate or sitaxentan sodium.

**Public and private hospital authority required**

*Continuing treatment (all patients)*

*Continuing PBS-subsidised treatment with iloprost trometamol of patients who have received approval for initial PBS-subsidised treatment with iloprost trometamol, and who have been assessed by a physician from a designated hospital to have achieved a response to their most recent course of iloprost trometamol treatment [see Note for definition of response].*

*Applications for authorisation must be in writing and must include:*

*(1) a completed authority prescription form; and*

*(2) a completed Pulmonary Arterial Hypertension PBS Authority Application - Supporting Information form [www.medicareaustralia.gov.au] which includes results from the 3 tests below, where available:*

*(i) RHC composite assessment; and*

*(ii) ECHO composite assessment; and*

*(iii) 6MWT.*

*Where fewer than 3 tests (see requirement 2 above) are able to be performed on clinical grounds, a reason outlining why the particular test/s could not be conducted must be provided with the authority application [see Note for test requirements].*

*The maximum quantity authorised will be limited to provide sufficient supply for 1 month of treatment, based on the dosage recommendations in the TGA-approved Product Information. A maximum of 5 repeats may be requested. Where fewer than 5 repeats are requested at the time of application, authority approvals for sufficient repeats to complete a maximum of 6 months of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

|      | <p><b>Medicare Australia</b><br/> <b>Prior Written Approval of Specialised Drugs</b><br/> <b>Reply Paid 9826</b><br/> <b>GPO Box 9826</b><br/> <b>HOBART TAS 7001</b></p> <p>Further prescribing information is on the Medicare Australia website at <a href="http://www.medicareaustralia.gov.au">www.medicareaustralia.gov.au</a>.</p> <p><b>NOTE:</b><br/> <b>TREATMENT OF ADULT PATIENTS WITH ACTIVE ANKYLOSING SPONDYLITIS</b></p> <p>The following information applies to the prescribing under the Pharmaceutical Benefits Scheme (PBS) of adalimumab, etanercept and infliximab for adult patients with active ankylosing spondylitis. Where the term 'tumour necrosis factor (TNF) alfa antagonist' appears in the following NOTES and restrictions, it refers to adalimumab, etanercept and infliximab only.</p> <p>A patient is eligible for PBS-subsidised treatment with only 1 of the 3 TNF-alfa antagonists at any 1 time.</p> <p>From 1 March 2007, under the PBS, all patients will be able to commence a treatment cycle where they may trial each PBS-subsidised TNF-alfa antagonist without having to experience a disease flare when swapping to the alternate agent. Under these interchangeability arrangements, within a single treatment cycle, a patient may continue to receive long-term treatment with a TNF-alfa antagonist while they continue to show a response to therapy.</p> <p>A patient who received PBS-subsidised TNF-alfa antagonist treatment prior to 1 March 2007 is considered to be in their first cycle as of 1 March 2007.</p> <p>Within the same treatment cycle, a patient cannot trial and fail, or cease to respond to, the same PBS-subsidised TNF-alfa antagonist more than once. A patient who, prior to 1 March 2007, was authorised to receive PBS-subsidised initial treatment for ankylosing spondylitis with the same agent twice, is exempt from this condition in respect of applications approved prior to 1 March 2007.</p> <p>Once a patient has either failed or ceased to respond to treatment 3 times, they are deemed to have completed a treatment cycle and they must have, at a minimum, a 5-year break in PBS-subsidised TNF-alfa antagonist therapy before they are eligible to commence the next cycle. The 5-year break is measured from the date of the last approval for PBS-subsidised TNF-alfa antagonist treatment in the most recent cycle to the date of the first application for initial treatment with a TNF-alfa antagonist under the new treatment cycle.</p> <p>A patient who has failed fewer than 3 TNF-alfa antagonists in a treatment cycle and who has a break in therapy of less than 5 years, may commence a further course of treatment within the same treatment cycle.</p> <p>A patient who has failed fewer than 3 TNF-alfa antagonists in a treatment cycle and who has a break in therapy of more than 5 years, may commence a new treatment cycle.</p> <p>There is no limit to the number of treatment cycles a patient may undertake in their lifetime.</p> <p>(1) How to prescribe PBS-subsidised TNF-alfa antagonist therapy after 1 March 2007.</p> <p>(a) Initial treatment.</p> <p>Applications for initial treatment should be made where:</p> <p>(i) a patient has received no prior PBS-subsidised TNF-alfa antagonist treatment in this treatment cycle and wishes to commence such therapy (Initial 1); or</p> <p>(ii) a patient has received prior PBS-subsidised (initial or continuing) TNF-alfa antagonist therapy and wishes to trial an alternate agent (Initial 2) [further details are under 'Swapping therapy' below]; or</p> <p>(iii) a patient wishes to re-commence treatment with a specific TNF-alfa antagonist following a break in PBS-subsidised therapy with that agent (Initial 2).</p> <p>Initial treatment authorisations will be limited to provide for a maximum of 16 weeks of therapy for etanercept and adalimumab and 18 weeks of treatment for infliximab.</p> <p>From 1 March 2007, a patient must be assessed for response to any course of initial PBS-subsidised treatment following a minimum of 12 weeks of therapy and this assessment must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased.</p> <p>Where a response assessment is not submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with that TNF-alfa antagonist.</p> |           |                          |                                   |

| Code | Item and Section 100 Restriction | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

*For second and subsequent courses of PBS-subsidised TNF-alfa antagonist treatment, it is recommended that a patient is reviewed in the month prior to completing their current course of treatment and that an application is posted to Medicare Australia no later than 2 weeks prior to the patient completing their current treatment course.*

*(b) Continuing treatment.*

*Following the completion of an initial treatment course with a specific TNF-alfa antagonist, a patient may qualify to receive up to 24 weeks of continuing treatment with that drug providing they have demonstrated an adequate response to treatment. The patient remains eligible to receive continuing TNF-alfa antagonist treatment with the same drug in courses of up to 24 weeks providing they continue to sustain the response.*

*It is recommended that a patient be reviewed in the month prior to completing their current course of treatment to ensure uninterrupted TNF-alfa antagonist supply.*

*Assessments of response to a course of PBS-subsidised therapy must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased.*

*Where a response assessment is not submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with that TNF-alfa antagonist.*

*(2) Swapping therapy.*

*Once initial treatment with the first PBS-subsidised TNF-alfa antagonist is approved, a patient may swap to an alternate TNF-alfa antagonist within the same treatment cycle without having to requalify with respect to the indices of disease severity (i.e. the erythrocyte sedimentation rate (ESR), the C-reactive protein (CRP) levels and the BASDAI), or the prior NSAID therapy and exercise program requirements.*

*A patient may trial an alternate TNF-alfa antagonist at any time, regardless of whether they are receiving therapy (initial or continuing) with a TNF-alfa antagonist at the time of the application. However, they cannot swap to a particular TNF-alfa antagonist if they have failed to respond to prior treatment with that drug within the same treatment cycle.*

*To ensure a patient receives the maximum treatment opportunities allowed under the interchangeability arrangements, it is important that they are assessed for response to every course of treatment approved, within the timeframes specified in the relevant restriction.*

*To avoid confusion, an application for a patient who wishes to swap to an alternate TNF-alfa antagonist should be accompanied by the approved authority prescription or remaining repeats for the TNF-alfa antagonist the patient is ceasing.*

*(3) Baseline measurements to determine response.*

*Medicare Australia will determine whether a response to treatment has been demonstrated based on the baseline measurements of the BASDAI, ESR and/or CRP submitted with the first authority application for a TNF-alfa antagonist. However, prescribers may provide new baseline measurements any time that an initial treatment authority application is submitted within a treatment cycle and Medicare Australia will assess response according to these revised baseline measurements.*

*For a new patient, the BASDAI used to determine the baseline must be measured while the patient is receiving NSAID therapy and completing their exercise program. However, this is not required for any subsequent BASDAI results for these patients, nor for patients who were 'grandfathered' on to TNF-alfa antagonist treatment.*

*To ensure consistency in determining response, the same indices of disease severity used to establish baseline at the commencement of treatment with each initial treatment application must be provided for all subsequent continuing treatment applications. Therefore, where only an ESR or CRP level is provided at baseline, an ESR or CRP level respectively must be provided to determine response.*

*(4) Re-commencement of treatment after a 5-year break in PBS-subsidised therapy.*

*A patient who wishes to trial a second or subsequent treatment cycle following a break in PBS-subsidised TNF-alfa antagonist therapy of at least 5 years, must requalify for initial treatment with respect to the indices of disease severity. Patients must have received treatment with at least 1 NSAID, at an adequate dose, for a minimum of 3 consecutive months immediately prior to the time the BASDAI, ESR and/or CRP levels are measured.*

*(5) Patients 'grandfathered' onto PBS-subsidised treatment with infliximab.*

| Code | Item and Section 100 Restriction | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

*From 1 March 2007, a patient who commenced treatment with infliximab for active ankylosing spondylitis prior to 1 March 2004 and who was 'grandfathered' onto PBS-subsidised therapy, and who continues to receive treatment in the same treatment cycle, will have further applications for treatment with infliximab assessed under the continuing treatment restriction.*

*Where pre-TNF- $\alpha$  antagonist treatment baselines were not provided, the following criteria must be met to demonstrate a response to treatment:*

*The BASDAI score must be either:*

- (i) no more than 20% greater than the score included in the initial application for PBS-subsidised treatment; or*
- (ii) no greater than 2.*

*AND*

*One of the following:*

- (a) an ESR measurement no greater than 25 mm per hour; or*
- (b) a CRP measurement no greater than 10 mg per L.*

*'Grandfather' arrangements will only apply for the first treatment cycle. For the second and subsequent cycles, a 'grandfather' patient must requalify for initial treatment under the criteria that apply to a new patient. See 'Re-commencement of treatment after a 5-year break in PBS-subsidised therapy' above for further details.*

#### **Public and private hospital authority required**

##### **Initial 1 (new patients)**

*First course of PBS-subsidised treatment with infliximab, by a rheumatologist, of an adult with active ankylosing spondylitis who has radiographically (plain X-ray) confirmed Grade II bilateral sacroiliitis or Grade III unilateral sacroiliitis and who has not received any PBS-subsidised treatment with either adalimumab, etanercept or infliximab in this treatment cycle; AND*

*(a) who has at least 2 of the following:*

- (i) low back pain and stiffness for 3 or more months that is relieved by exercise but not by rest; or*
- (ii) limitation of motion of the lumbar spine in the sagittal and the frontal planes as determined by a score of at least 1 on each of the lumbar flexion and lumbar side flexion measurements of the Bath Ankylosing Spondylitis Metrology Index (BASMI) [for further information on the BASMI please refer to the Medicare Australia website at [www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au)]; or*
- (iii) limitation of chest expansion relative to normal values for age and gender [for chest expansion normal values please refer to the Medicare Australia website at [www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au)]; AND*

*(b) who has failed to achieve an adequate response following treatment with at least 2 non-steroidal anti-inflammatory drugs (NSAIDs), whilst completing an appropriate exercise program, for a total period of 3 months.*

*The application must include details of the NSAIDs trialled, their doses and duration of treatment. If the NSAID dose is less than the maximum recommended dose in the relevant TGA-approved Product Information, the application must include the reason a higher dose cannot be used.*

*If treatment with NSAIDs is contraindicated according to the relevant TGA-approved Product Information, the application must provide details of the contraindication.*

*If intolerance to NSAID treatment develops during the relevant period of use which is of a severity to necessitate permanent treatment withdrawal, the application must provide details of the nature and severity of this intolerance. Details of the toxicities, including severity, which will be accepted for the purposes of administering this restriction can be found on the Medicare Australia website [[www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au)].*

*For details on the appropriate minimum exercise program that will be accepted for the purposes of administering this restriction, please refer to the Medicare Australia website at [www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au).*

*The following criteria indicate failure to achieve an adequate response and must be demonstrated at the time of the initial application:*

- (a) a Bath Ankylosing Spondylitis Disease Activity Index (BASDAI) of at least 4 on a 0-10 scale; AND*
- (b) an elevated erythrocyte sedimentation rate (ESR) greater than 25 mm per hour or a C-reactive protein (CRP) level greater than 10 mg per L.*

*The BASDAI must be determined at the completion of the 3 month NSAID and exercise trial, but prior to ceasing NSAID treatment. The BASDAI must be no more than 1 month old at the time of initial application.*

| Code | Item and Section 100 Restriction | Pack Size | Price ex Manufacturer \$ | Proprietary Name and Manufacturer |
|------|----------------------------------|-----------|--------------------------|-----------------------------------|
|------|----------------------------------|-----------|--------------------------|-----------------------------------|

*Both ESR and CRP measures should be provided with the initial treatment application and both must be no more than 1 month old. If the above requirement to demonstrate an elevated ESR or CRP cannot be met, the application must state the reason this criterion cannot be satisfied.*

*Authority applications must be made in writing and must include:*

*(a) a completed authority prescription form; and*

*(b) a completed Ankylosing Spondylitis PBS Authority Application - Supporting Information Form [www.medicareaustralia.gov.au] which must include the following:*

*(i) a copy of the radiological report confirming Grade II bilateral sacroiliitis or Grade III unilateral sacroiliitis; and*

*(ii) a completed BASDAI Assessment Form [www.medicareaustralia.gov.au]; and*

*(iii) a completed Exercise Program Self Certification Form included in the supporting information form; and*  
*(iv) a signed patient acknowledgment form. Completion of this form declares that the patient understands and acknowledges that PBS-subsidised treatment with the TNF- $\alpha$  antagonists (adalimumab, etanercept or infliximab) for ankylosing spondylitis will cease if they do not demonstrate the response to treatment required to support continuation of PBS-subsidised treatment at any assessment where a response must be demonstrated.*

*The assessment of the patient's response to the initial course of treatment must be made following a minimum of 12 weeks of treatment and submitted to Medicare Australia no later than 4 weeks from the cessation of that treatment course. If the response assessment is not submitted within these timeframes, the patient will be deemed to have failed this course of treatment.*

*A maximum of 18 weeks of treatment with infliximab will be approved under this criterion.*

*At the time of the authority application, the doctor should request the appropriate number of vials, based on the weight of the patient, to provide for a single infusion at a dose of 5 mg per kg. Up to a maximum of 3 repeats will be authorised.*

*Where fewer than 3 repeats are initially requested with the authority prescription, authority approvals for sufficient repeats to complete a maximum of 18 weeks of treatment may be requested by telephone.*

#### **Public and private hospital authority required**

*Initial 2 (change or re-commencement for all patients)*

*Initial course of PBS-subsidised treatment with infliximab, by a rheumatologist, of an adult with a documented history of active ankylosing spondylitis who, in this treatment cycle, has received prior PBS-subsidised treatment with either adalimumab, etanercept or infliximab for this condition and has not failed PBS-subsidised therapy with infliximab.*

*To demonstrate a response to treatment the application must be accompanied by the results of the most recent course of TNF- $\alpha$  antagonist therapy within the timeframes specified in the relevant restriction.*

*Where the most recent course of PBS-subsidised TNF- $\alpha$  antagonist treatment was approved under an initial treatment restriction after 1 March 2007, the patient must have been assessed for response to that course following a minimum of 12 weeks of treatment. Where the most recent course of PBS-subsidised TNF- $\alpha$  antagonist treatment was approved under an initial treatment restriction prior to 1 March 2007, the patient must have been assessed for response to that course following at least 4 weeks of treatment. These assessments must be provided to Medicare Australia no later than 4 weeks from the date the course was ceased.*

*If the response assessment to the previous course of TNF- $\alpha$  antagonist treatment is not submitted as detailed above, the patient will be deemed to have failed therapy with that particular course of TNF- $\alpha$  antagonist.*

*Authority applications must be made in writing and must include:*

*(a) a completed authority prescription form; and*

*(b) a completed Ankylosing Spondylitis PBS Authority Application - Supporting Information Form [www.medicareaustralia.gov.au] which includes a completed BASDAI Assessment Form with certification by the prescriber and the patient that the patient did not have access to their baseline BASDAI at the time of their assessment.*

*A maximum of 18 weeks of treatment with infliximab will be approved under this criterion.*

*At the time of the authority application, the doctor should request the appropriate number of vials, based on the weight of the patient, to provide for a single infusion at a dose of 5 mg per kg. Up to a maximum of 3 repeats will be authorised.*

| Code | Item and Section 100 Restriction | Pack Size | Price ex Manufacturer \$ | Proprietary Name and Manufacturer |
|------|----------------------------------|-----------|--------------------------|-----------------------------------|
|------|----------------------------------|-----------|--------------------------|-----------------------------------|

Where fewer than 3 repeats are initially requested with the authority prescription, authority approvals for sufficient repeats to complete a maximum of 18 weeks of treatment may be requested by telephone.

**Public and private hospital authority required**

*Continuing treatment for all patients*

*Continuing PBS-subsidised treatment, by a rheumatologist, of an adult with a documented history of active ankylosing spondylitis who:*

- (a) has demonstrated a response to treatment with infliximab; and*
- (b) whose most recent course of PBS-subsidised therapy in this treatment cycle was with infliximab.*

*Response is defined as an improvement from baseline of at least 2 of the BASDAI and 1 of the following:*

- (a) an ESR measurement no greater than 25 mm per hour; or*
- (b) a CRP measurement no greater than 10 mg per L; or*
- (c) an ESR or CRP measurement reduced by at least 20% from baseline.*

*For a 'grandfather' patient who does not have baselines prior to commencing treatment with a TNF-alfa antagonist, see Note 5 for a definition of response to treatment.*

*Where only 1 acute phase reactant measurement is supplied in the first application for PBS-subsidised treatment, that same marker must be measured and supplied in all subsequent continuing treatment applications.*

*Where the most recent course of PBS-subsidised TNF-alfa antagonist treatment was approved under an initial treatment restriction after 1 March 2007, the patient must have been assessed for response to that course following a minimum of 12 weeks of treatment. Where the most recent course of PBS-subsidised TNF-alfa antagonist treatment was approved under an initial treatment restriction prior to 1 March 2007, the patient must have been assessed for response to that course following at least 4 weeks of treatment.*

*Applications for continuing treatment must be made in writing and should be posted to Medicare Australia no less than 2 weeks prior to the completion of the current treatment course.*

*Written applications for authorisation must include:*

- (a) a completed authority prescription form; and*
- (b) a completed Ankylosing Spondylitis PBS Authority Application - Supporting Information Form [www.medicareaustralia.gov.au] which includes a completed BASDAI Assessment Form with certification by the prescriber and the patient that the patient did not have access to their baseline BASDAI at the time of their continuing treatment assessment.*

*All measurements provided must be no more than 1 month old at the time of application.*

*A maximum of 24 weeks of treatment with infliximab will be authorised under this criterion.*

*At the time of the authority application, the doctor should request the appropriate number of vials, based on the weight of the patient, to provide for a single infusion at a dose of 5 mg per kg. Up to a maximum of 3 repeats will be authorised.*

*Where fewer than 3 repeats are initially requested with the authority prescription, authority approvals for sufficient repeats to complete a maximum of 24 weeks of treatment may be requested by telephone.*

**NOTE:**

**TREATMENT OF ADULT PATIENTS WITH SEVERE ACTIVE RHEUMATOID ARTHRITIS**

*The following information applies to the prescribing under the Pharmaceutical Benefits Scheme (PBS) of the biological disease modifying anti-rheumatic drugs (bDMARDs) for adults with severe active rheumatoid arthritis. Where the term bDMARD appears in the following notes and restrictions it refers to the tumour necrosis factor (TNF) alfa antagonists (adalimumab, etanercept, infliximab), the chimeric anti-CD20 monoclonal antibody (rituximab), the interleukin-1 inhibitor (anakinra) and the T-cell co-stimulation modulator (abatacept).*

*Patients are eligible for PBS-subsidised treatment with only 1 of the above biological disease modifying anti-rheumatic drugs at any 1 time.*

*PBS-subsidised infliximab, anakinra, rituximab and abatacept must be used in combination with methotrexate at a dose of at least 7.5 mg weekly. Where a patient cannot tolerate 7.5 mg of methotrexate weekly, they are only eligible to receive PBS-subsidised etanercept and adalimumab.*

continued ➡

| Code | Item and Section 100 Restriction | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

*In order to be eligible to receive PBS-subsidised treatment with rituximab, a patient must have already failed to demonstrate a response to at least 1 course of treatment with a PBS-subsidised TNF-alfa antagonist.*

*From 1 March 2008, under the PBS, all patients will be able to commence a Treatment Cycle where they may trial PBS-subsidised bDMARD agents without having to experience a disease flare when swapping to an alternate agent. Under these interchangeability arrangements, within a single Treatment Cycle, a patient may continue to receive long-term treatment with a bDMARD while they continue to show a response to therapy.*

*A patient who received PBS-subsidised bDMARD treatment prior to 1 March 2008 is considered to be in their first Cycle as of 1 March 2008.*

*Within the same Treatment Cycle, a patient cannot trial and fail, or cease to respond to, the same PBS-subsidised bDMARD more than once.*

*Once a patient has either failed or ceased to respond to treatment 3 times, they are deemed to have completed a Treatment Cycle and they must have, at a minimum, a 5-year break in PBS-subsidised bDMARD therapy before they are eligible to commence the next Cycle.*

*For patients who have failed PBS-subsidised treatment with 3 bDMARDs prior to 1 March 2008 please contact Medicare Australia on 1800 700 270.*

*The 5-year break is measured from the date of the last approval for PBS-subsidised bDMARD treatment in the most recent Cycle to the date of the first application for initial treatment with a bDMARD under the new Treatment Cycle.*

*A patient who has failed fewer than 3 bDMARDs in a Treatment Cycle and who has a break in therapy of less than 5 years, may commence a further course of treatment within the same Treatment Cycle.*

*A patient who has failed fewer than 3 bDMARDs in a Treatment Cycle and who has a break in therapy of more than 5 years, may commence a new Treatment Cycle.*

*There is no limit to the number of Treatment Cycles a patient may undertake in their lifetime.*

*If patients fail to respond to a particular bDMARD within a single Treatment Cycle, they are not eligible to receive further PBS-subsidised treatment with that drug until they commence the next Cycle.*

*(1) How to prescribe PBS-subsidised bDMARD therapy after 1 March 2008.*

*(a) Initial treatment.*

*Applications for initial treatment should be made where:*

- (i) a patient has received no prior PBS-subsidised bDMARD treatment in this Treatment Cycle and wishes to commence such therapy, excluding rituximab (Initial 1); or*
- (ii) a patient has received prior PBS-subsidised (initial or continuing) bDMARD therapy and wishes to trial an alternate agent (Initial 2) [further details are under 'Swapping therapy' below]; or*
- (iii) a patient wishes to re-commence treatment with a specific bDMARD following a break in PBS-subsidised therapy with that agent (Initial 2).*

*Initial treatment authorisations will be limited to provide a maximum of 16 weeks of therapy for etanercept, adalimumab, anakinra and abatacept, 22 weeks of therapy for infliximab and 2 infusions of rituximab.*

*From 1 March 2008, a patient must be assessed for response to any course of initial PBS-subsidised treatment (excluding rituximab) following a minimum of 12 weeks of therapy and this assessment must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased.*

*Rituximab patients must be assessed following a minimum of 12 weeks after the first infusion, and this assessment must be submitted to Medicare Australia within 4 weeks.*

*Where a response assessment is not submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with that bDMARD.*

*For second and subsequent courses of PBS-subsidised bDMARD (excluding rituximab) treatment it is recommended that a patient is reviewed in the month prior to completing their current course of treatment and that an application is submitted to Medicare Australia no later than 2 weeks prior to the patient completing their current treatment course.*

*Rituximab patients:*

*A further application may be submitted to Medicare Australia 24 weeks after the first infusion. New baselines may be submitted with this application if appropriate.*

| Code | Item and Section 100 Restriction | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

**(b) Continuing treatment.**

Following the completion of an initial treatment course with a specific bDMARD (excluding rituximab), a patient may qualify to receive up to 24 weeks of continuing treatment with that drug providing they have demonstrated an adequate response to treatment. The patient remains eligible to receive continuing bDMARD treatment with the same drug in courses of up to 24 weeks providing they continue to sustain the response.

It is recommended that a patient be reviewed in the month prior to completing their current course of treatment to ensure uninterrupted bDMARD supply.

Assessments of response to a course of PBS-subsidised therapy must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased.

**Rituximab patients:**

A patient may qualify to receive a further course of treatment (every 24 weeks) with this agent providing they have demonstrated an adequate response to treatment following a minimum of 12 weeks after the first infusion of their most recent treatment with rituximab. The patient remains eligible to receive a course of rituximab every 24 weeks providing they continue to demonstrate a response as specified in the restriction.

Where a response assessment is not submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with that bDMARD.

**(2) Swapping therapy.**

Once initial treatment with the first PBS-subsidised bDMARD is approved, a patient may swap to an alternate bDMARD within the same Treatment Cycle without having to requalify with respect to the indices of disease severity (i.e. the erythrocyte sedimentation rate (ESR), the C-reactive protein (CRP) levels and the joint count) or the prior non-bDMARD therapy requirements. However the requirement for concomitant treatment with methotrexate, where it applies, must be met for each bDMARD trialled.

Patients who are not able to complete a minimum of 12 weeks of an initial treatment course will be deemed to have failed treatment with that agent.

A patient may trial an alternate bDMARD at any time, regardless of whether they are receiving therapy (initial or continuing) with a bDMARD at the time of the application. However, they cannot swap to a particular bDMARD if they have failed to respond to prior treatment with that drug within the same Treatment Cycle.

In order to trial rituximab, a patient must have trialled and failed to demonstrate a response to at least 1 PBS-subsidised TNF-alfa antagonist treatment.

To ensure a patient receives the maximum treatment opportunities allowed under the interchangeability arrangements, it is important that they are assessed for response to every course of treatment approved, within the timeframes specified in the relevant restriction.

PBS subsidy does not allow for patients to receive treatment with another PBS-subsidised biological agent during the required treatment-free period applying to patients who have demonstrated a response to their most recent course of rituximab. This means that patients who have demonstrated a response to a course of rituximab must have a PBS-subsidised biological therapy treatment-free period of at least 22 weeks, immediately following the second infusion, before swapping to an alternate bDMARD. Patients who fail to respond to rituximab and who qualify and wish to trial a course of an alternate bDMARD may do so without having to have any treatment-free period.

To avoid confusion, an application for a patient who wishes to swap to an alternate bDMARD should be accompanied by the approved authority prescription or remaining repeats for the bDMARD the patient is ceasing.

**NOTE:**

**(3) Baseline measurements to determine response.**

Medicare Australia will determine whether a response to treatment has been demonstrated based on the baseline measurements of the joint count, ESR and/or CRP submitted with the first authority application for a bDMARD. However, prescribers may provide new baseline measurements any time that an initial treatment authority application is submitted within a Treatment Cycle and Medicare Australia will assess response according to these revised baseline measurements.

| Code | Item and Section 100 Restriction | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

To ensure consistency in determining response, the same indices of disease severity used to establish baseline at the commencement of treatment with each initial treatment application must be provided for all subsequent continuing treatment applications. Therefore, where only an ESR or CRP level is provided at baseline, an ESR or CRP level respectively must be provided to determine response. Similarly, where the baseline active joint count is based on total active joints (i.e. more than 20 active joints), response will be determined according to the reduction in the total number of active joints. Where the baseline is determined on total number of major joints, the response must be demonstrated on the total number of major joints.

The baseline joint and blood counts should be performed whilst the patient is still on treatment or within 1 month of ceasing prior treatment.

(4) Re-commencement of treatment after a 5-year break in PBS-subsidised therapy.

A patient who wishes to trial a second or subsequent Treatment Cycle following a break in PBS-subsidised bDMARD therapy of at least 5 years, must requalify for initial treatment with respect to the indices of disease severity. Patients must have received treatment with at least 1 non-biological DMARD, at an adequate dose, for a minimum of 3 months at the time the ESR and/or CRP levels and the active joint count are measured.

(5) Patients 'grandfathered' onto PBS-subsidised treatment with rituximab or abatacept.

From 1 March 2008, a patient who commenced treatment with rituximab for severe rheumatoid arthritis prior to 7 March 2007 or abatacept for severe rheumatoid arthritis prior to 1 November 2007 and who was 'grandfathered' on to PBS-subsidised therapy, and who continues to receive treatment in the same Treatment Cycle, will have further applications for treatment with rituximab or abatacept assessed under the continuing treatment restriction.

A patient may only qualify for PBS-subsidised treatment under this criterion once. A maximum of 24 weeks of treatment with abatacept will be authorised under this criterion.

'Grandfather' arrangements will only apply for the first Treatment Cycle. For the second and subsequent Cycles, a 'grandfather' patient must requalify for initial treatment under the criteria that applies to a new patient. See 'Re-commencement of treatment after a 5-year break in PBS-subsidised therapy' above for further details.

#### **Public and private hospital authority required**

##### **Initial 1 (new patients)**

Application for initial PBS-subsidised treatment with infliximab, in combination with methotrexate at a dose of at least 7.5 mg weekly, by a rheumatologist or clinical immunologist with expertise in the management of rheumatoid arthritis, of adults who:

- (a) have severe active rheumatoid arthritis; and
- (b) have received no prior PBS-subsidised treatment with a bDMARD for this condition in this treatment cycle; and
- (c) have failed to achieve an adequate response to the following treatments:
  - (i) methotrexate at a dose of at least 20 mg weekly; and
  - (ii) methotrexate (at a minimum dose of 7.5 mg weekly), in combination with 2 other non-biological disease modifying anti-rheumatic drugs (DMARDs), for a minimum of 3 months; and
  - (iii) a minimum of 3 months' treatment with:
    - leflunomide alone; or
    - leflunomide in combination with methotrexate; or
    - cyclosporin.

If treatment with any of the above-mentioned drugs is contraindicated according to the relevant TGA-approved Product Information, please provide details at the time of application.

If intolerance to treatment develops during the relevant period of use, which is of a severity necessitating permanent treatment withdrawal, please provide details of the degree of this toxicity at the time of application. Details of the accepted toxicities, including severity, can be found on the Medicare Australia website [www.medicareaustralia.gov.au].

| Code | Item and Section 100 Restriction | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

*The following initiation criteria indicate failure to achieve an adequate response and must be demonstrated in all patients at the time of the initial application:*  
*an elevated erythrocyte sedimentation rate (ESR) greater than 25 mm per hour or a C-reactive protein (CRP) level greater than 15 mg per L;*

*AND either*

*(i) a total active joint count of at least 20 active (swollen and tender) joints; or*

*(ii) at least 4 active joints from the following list of major joints:*

*— elbow, wrist, knee and/or ankle (assessed as swollen and tender); and/or*

*— shoulder and/or hip (assessed as pain in passive movement and restriction of passive movement, where pain and limitation of movement are due to active disease and not irreversible damage such as joint destruction or bony overgrowth).*

*All tests and assessments should be performed preferably whilst still on treatment, but no longer than 1 month following cessation of the most recent prior treatment.*

*If the above requirement to demonstrate an elevated ESR or CRP cannot be met, the application must state the reasons why this criterion cannot be satisfied.*

*The authority application must be made in writing and must include:*

*(1) a completed authority prescription form; and*

*(2) a completed Rheumatoid Arthritis PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))] which includes details of the patient's ESR and CRP measurements and the patient's active joint count which must have been assessed no earlier than 1 month prior to the date of application; and*

*(3) a signed patient acknowledgement.*

*A maximum of 22 weeks of treatment will be authorised under this restriction.*

*At the time of the authority application, medical practitioners should request the appropriate quantity of vials, based on the weight of the patient, to provide sufficient for a single infusion at a dose of 3 mg per kg. Up to a maximum of 3 repeats may be authorised.*

*Where fewer than 3 repeats are requested at the time of the initial application, authority approvals for sufficient repeats to complete a maximum of 22 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

*Assessment of a patient's response to an initial course of treatment must be made after at least 12 weeks of treatment so that there is adequate time for a response to be demonstrated. This assessment, which will be used to determine eligibility for continuing treatment, must be submitted to Medicare Australia no later than 1 month from the date of completion of this initial course of treatment. Where a response assessment is not undertaken and submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with infliximab.*

*Patients who fail to demonstrate a response to treatment with infliximab under this restriction will not be eligible to receive further PBS-subsidised treatment with this drug, in this treatment cycle. Patients may re-trial infliximab after a minimum of 5 years have elapsed between the date the last prescription for a PBS-subsidised bDMARD was approved in this cycle and the date of the first application under the new cycle.*

#### **Public and private hospital authority required**

*Initial 2 (change or re-commencement)*

*Application for an initial course of PBS-subsidised treatment with infliximab, in combination with methotrexate at a dose of at least 7.5 mg weekly, by a rheumatologist or clinical immunologist with expertise in the management of rheumatoid arthritis, of adults who:*

*(a) have a documented history of severe active rheumatoid arthritis; and*

*(b) have received prior PBS-subsidised bDMARD treatment for this condition in this treatment cycle and are eligible to receive further bDMARD therapy.*

*The authority application must be made in writing and must include:*

*(1) a completed authority prescription form; and*

*(2) a completed Rheumatoid Arthritis PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))].*

|------|----------------------------------|-----------|--------------------------|-----------------------------------|
|------|----------------------------------|-----------|--------------------------|-----------------------------------|

*Applications for patients who have received PBS-subsidised treatment with infliximab within this treatment cycle and who wish to re-commence therapy with this drug within this same cycle, must be accompanied by evidence of a response to the patient's most recent course of PBS-subsidised infliximab treatment, within the timeframes specified below.*

*A maximum of 22 weeks of treatment will be authorised under this restriction.*

*At the time of the authority application, medical practitioners should request the appropriate quantity of vials, based on the weight of the patient, to provide sufficient for a single infusion at a dose of 3 mg per kg. Up to a maximum of 3 repeats may be authorised.*

*Where fewer than 3 repeats are requested at the time of the initial application, authority approvals for sufficient repeats to complete a maximum of 22 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

*Where the most recent course of PBS-subsidised infliximab treatment was approved under either of the initial treatment restrictions (i.e. for patients with no prior PBS-subsidised bDMARD therapy or, under this restriction, for patients who have received previous PBS-subsidised bDMARD therapy), patients must have been assessed for response following a minimum of 12 weeks of therapy. This assessment must be provided to Medicare Australia no later than 4 weeks from the date that course was ceased.*

*Where the most recent course of PBS-subsidised infliximab treatment was approved under the continuing treatment criteria, patients must have been assessed for response, and the assessment must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased.*

*Patients who fail to demonstrate a response to treatment with infliximab under this restriction will not be eligible to receive further PBS-subsidised treatment with this drug, in this treatment cycle. Patients may re-trial infliximab after a minimum of 5 years have elapsed between the date the last prescription for a PBS-subsidised bDMARD was approved in this cycle and the date of the first application under the new cycle.*

#### **Public and private hospital authority required**

##### **Continuing treatment**

*Continuing PBS-subsidised treatment with infliximab, in combination with methotrexate at a dose of at least 7.5 mg weekly, by a rheumatologist or clinical immunologist with expertise in the management of rheumatoid arthritis, of adults:*

- (a) who have a documented history of severe active rheumatoid arthritis; and*
- (b) who have demonstrated an adequate response to treatment with infliximab; and*
- (c) whose most recent course of PBS-subsidised bDMARD treatment in this treatment cycle was with infliximab.*

*An adequate response to treatment is defined as:*

*an ESR no greater than 25 mm per hour or a CRP level no greater than 15 mg per L or either marker reduced by at least 20% from baseline;*

*AND either of the following:*

- (i) a reduction in the total active (swollen and tender) joint count by at least 50% from baseline, where baseline is at least 20 active joints; or*
- (ii) a reduction in the number of the following major active joints, from at least 4, by at least 50%:*
  - elbow, wrist, knee and/or ankle (assessed as swollen and tender); and/or*
  - shoulder and/or hip (assessed as pain in passive movement and restriction of passive movement, where pain and limitation of movement are due to active disease and not irreversible damage such as joint destruction or bony overgrowth).*

*The authority application must be made in writing and must include:*

- (1) a completed authority prescription form; and*
- (2) a completed Rheumatoid Arthritis PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))].*

*A maximum of 24 weeks of treatment will be approved under this restriction.*

*At the time of the authority application, medical practitioners should request the appropriate quantity of vials, based on the weight of the patient, to provide sufficient for a single infusion at a dose of 3 mg per kg. Up to a maximum of 2 repeats may be authorised.*

| Code  | Item and Section 100 Restriction                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |    |

**NOTE:****TREATMENT OF ADULT PATIENTS WITH SEVERE ACTIVE PSORIATIC ARTHRITIS**

*The following information applies to the prescribing under the Pharmaceutical Benefits Scheme (PBS) of the biological agents (adalimumab, etanercept and infliximab) for adult patients with severe active psoriatic arthritis.*

*Patients are eligible for PBS-subsidised treatment with only 1 of the above biological agents at any 1 time. Where the term 'biological agents' appears in the following NOTES and restrictions, it only refers to adalimumab, etanercept and infliximab.*

*From 1 August 2006, all patients will be able to commence a 'Biological Treatment Cycle' (Cycle), where they may trial adalimumab, etanercept or infliximab without having to meet the initial treatment criteria, that is they will not need to experience a disease flare, when swapping to the alternate agent. Under these interchangeability arrangements, within a single Cycle, patients may receive long-term treatment with a biological agent as long as they sustain a response to therapy.*

*Following demonstration of response to initial treatment, these biological agents are available under the PBS for continuing treatment as set out in the continuing treatment restriction for each agent.*

*Once patients have either failed or ceased to sustain a response to treatment 3 times, they are deemed to have completed a single Cycle and they must have, at a minimum, a 5-year break in PBS-subsidised biological therapy before they are eligible to commence another Cycle [further details are under '(5) Re-commencement of treatment after a 5-year break in PBS-subsidised therapy' below].*

*The 5-year break in therapy will be measured from the date the last approval for PBS-subsidised treatment was granted in the most recent Cycle to the date of the first application for initial treatment with a biological agent under the new Cycle.*

*Within the same Cycle, patients are not allowed to fail, or cease to respond to, the same PBS-subsidised biological agent more than once. Therefore once a patient fails to meet the response criteria for any biological agent, they must change to an alternate agent which they have not previously failed, if they wish to continue PBS-subsidised biological treatment.*

*Patients for whom a break in PBS-subsidised therapy of less than 5 years has occurred, and, who have failed therapy fewer than 3 times within a particular treatment Cycle, as defined in the relevant restriction, may commence a further course of treatment within that Cycle.*

*Patients for whom a break in PBS-subsidised therapy of 5 years or more has occurred, and, who have failed therapy fewer than 3 times within a particular treatment Cycle, as defined in the relevant restriction, are eligible to commence a new Cycle.*

*There is no limit to the number of Biological Treatment Cycles a patient may undertake in their lifetime.*

*How to prescribe biological agents for the treatment of severe active psoriatic arthritis after 1 August 2006.*

**(1) Initial treatment.**

continued ➞

| Code | Item and Section 100 Restriction | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

*Applications for initial treatment should be made where:*

- (i) patients have received no prior PBS-subsidised biological treatment and wish to commence such therapy (Initial 1); and*
- (ii) patients have received prior PBS-subsidised biological therapy and wish to trial an alternate agent (Initial 2) [further details are under 'Swapping therapy' below]; and*
- (iii) patients wish to re-commence treatment with a specific biological agent following a break in PBS-subsidised therapy with that specific agent (Initial 2).*

*All applications for initial treatment for non-grandfather patients will be limited to provide for a maximum of 16 weeks of therapy for all agents except for infliximab, for which a maximum of 22 weeks will be authorised. It is recommended that patients be reviewed in the month prior to completing their course of initial treatment to ensure uninterrupted biological agent supply.*

*Patients must be assessed for response to any course of PBS-subsidised initial treatment following a minimum of 12 weeks of therapy and this assessment must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased. Where a response assessment is not submitted to Medicare Australia within these timeframes, patients will be deemed to have failed to respond to treatment with that biological agent.*

*Grandfather patients.*

*Applications for patients who commenced treatment with etanercept prior to 17 March 2005 or adalimumab and infliximab prior to 16 March 2006, may apply for initial PBS-subsidised treatment as continuing therapy under the relevant initial treatment restriction (Initial 3). These patients access the PBS interchangeability arrangements in the same way as new patients who have not been treated with any biological agent prior to PBS listing of that agent.*

*Applications for initial PBS-subsidised treatment for grandfather patients will provide for a maximum of 24 weeks of treatment for all agents. Approval will be based on the criteria included in the relevant restriction.*

#### *(2) Continuing treatment.*

*Following the completion of an initial treatment course with a specific biological agent, patients may qualify to receive up to 24 weeks of continuing treatment with that drug providing they have demonstrated an adequate response to treatment. Patients are eligible to receive continuing biological treatment with the same drug in courses of up to 24 weeks providing they continue to sustain the response.*

*Patients must be assessed for response to a course of continuing therapy, and the assessment must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased. Where a response assessment is not submitted to Medicare Australia within these timeframes, patients will be deemed to have failed to respond to treatment with that biological agent.*

#### *(3) Swapping therapy.*

*Once an authority for initial treatment with the first PBS-subsidised biological agent is approved, patients may swap to an alternate biological agent without having to re-qualify with respect to either the indices of disease severity (i.e. erythrocyte sedimentation rate (ESR) or C-reactive protein (CRP) level, and active joint count) or the prior non-biological therapy requirements.*

*Patients may swap to an alternate biological agent at any time, regardless of whether they are receiving therapy (initial or continuing) with a biological agent at the time of the application or not.*

*Patients may alternate between therapy with any biological agent of their choice (1 at a time) providing:*

- (i) they have not received PBS-subsidised treatment with that particular biological agent previously; or*
- (ii) they have demonstrated an adequate response to that particular biological agent if they have previously trialled it on the PBS.*

*To ensure patients receive the maximum treatment opportunities allowed under the interchangeability arrangements, it is important that they are assessed for response to every course of treatment approved, within the timeframes specified in the relevant restriction.*

*To avoid confusion, applications for patients who wish to swap to an alternate biological agent should be accompanied by the approved authority prescription or remaining repeats for the biological agent the patient is ceasing.*

#### *(4) Baseline measurements to determine response.*

| Code | Item and Section 100 Restriction | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

*Medicare Australia will determine whether a response to treatment has been demonstrated based on the baseline measurements of the indices of disease severity submitted with the first authority application for a biological agent. However, prescribers may provide new baseline measurements any time that an initial treatment authority is submitted within a treatment Cycle and Medicare Australia will assess response according to these revised baseline measurements.*

*To ensure consistency in determining response, the same indices of disease severity used to establish baseline at the commencement of treatment with each initial treatment application must be provided for all subsequent continuing treatment applications. Therefore, where only an ESR or CRP level is provided at baseline, an ESR or CRP level respectively must be provided to determine response. Similarly, where the baseline active joint count is based on total active joints (i.e. 20 or more active joints), response will be determined according to a reduction in the total number of active joints.*

*(5) Re-commencement of treatment after a 5-year break in PBS-subsidised therapy.*

*Patients who wish to trial a second or subsequent treatment Cycle following a break in PBS-subsidised biological therapy of at least 5 years, must re-qualify for initial treatment with respect to both the indices of disease severity. Patients must have received treatment with methotrexate or sulfasalazine or leflunomide, at an adequate dose, for a minimum of 3 months at the time the ESR or CRP levels and the active joint counts are measured.*

#### **Public and private hospital authority required**

##### **Initial 1**

*Initial PBS-subsidised treatment with infliximab, by a rheumatologist or clinical immunologist with expertise in the management of psoriatic arthritis, of adults who:*

- (1) have severe active psoriatic arthritis; and*
- (2) have received no prior PBS-subsidised biological treatment for this condition in this Treatment Cycle; and*
- (3) have failed to achieve an adequate response to:*
  - (a) methotrexate at a dose of at least 20 mg weekly for a minimum period of 3 months; and*
  - (b) sulfasalazine at a dose of at least 2 g per day for a minimum period of 3 months; or*
  - (c) leflunomide at a dose of up to 20 mg daily for a minimum period of 3 months.*

*Patients must have had the psoriatic component of their disease confirmed by a dermatologist or by biopsy at any time.*

*If treatment with any of the above-mentioned drugs is contraindicated according to the relevant TGA-approved Product Information, please provide details at the time of application.*

*If intolerance to treatment develops during the relevant period of use, which is of a severity to necessitate permanent treatment withdrawal, please provide details of the degree of this toxicity at the time of application. Details of acceptable toxicities, including severity, can be found on the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au)).*

*The following initiation criteria indicate failure to achieve an adequate response and must be demonstrated in all patients at the time of the initial application:*

*an elevated erythrocyte sedimentation rate (ESR) greater than 25 mm per hour or a C-reactive protein (CRP) level greater than 15 mg per L; AND either*

- (i) an active joint count of at least 20 active (swollen and tender) joints; or*
- (ii) at least 4 active joints from the following list of major joints:*
  - elbow, wrist, knee and/or ankle (assessed as swollen and tender); and/or*
  - shoulder and/or hip (assessed as pain in passive movement and restriction of passive movement, where pain and limitation of movement are due to active disease and not irreversible damage such as joint destruction or bony overgrowth).*

*If the above requirement to demonstrate an elevated ESR or CRP cannot be met, the application must state the reasons why this criterion cannot be satisfied.*

continued 

| Code | Item and Section 100 Restriction | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

*The authority application must be made in writing and must include:*

- (1) a completed authority prescription form; and*
  - (2) a completed Psoriatic Arthritis PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))] which includes details of the patient's ESR and CRP measurements and the patient's active joint count which must have been assessed no earlier than 1 month prior to the date of application; and*
  - (3) a copy of the signed patient acknowledgement form which is included in the Supporting Information Form.*
- Completion of this form declares that the patient understands and acknowledges that PBS-subsidised treatment will cease if they do not demonstrate the response to treatment required to support continuation of PBS-subsidised treatment at any assessment where a response must be demonstrated.*

*At the time of the authority application, medical practitioners should request the appropriate quantity of vials, based on the weight of the patient, to provide sufficient for a single infusion at a dose of 5 mg per kg. Up to a maximum of 3 repeats may be authorised.*

*Where fewer than 3 repeats are requested at the time of the initial application, authority approvals for sufficient repeats to complete a maximum of 22 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

*Patients who fail to demonstrate a response to treatment with infliximab under this restriction will not be eligible to receive further PBS-subsidised treatment with this drug, in this Treatment Cycle.*

#### **Public and private hospital authority required**

##### ***Initial 2***

*Initial PBS-subsidised treatment with infliximab, by a rheumatologist or clinical immunologist with expertise in the management of psoriatic arthritis, of adults who:*

- (1) have a documented history of severe active psoriatic arthritis; and*
- (2) have received prior PBS-subsidised biological treatment for this condition in this Treatment Cycle and are eligible to receive further biological therapy; and*
- (3) have not failed treatment with infliximab during the current Treatment Cycle.*

*Applications for patients who have demonstrated a response to PBS-subsidised infliximab treatment within this Treatment Cycle and who wish to re-commence infliximab treatment within the same Cycle following a break in therapy, will only be approved where evidence of a response to the patient's most recent course of PBS-subsidised infliximab treatment has been submitted to Medicare Australia within 1 month of cessation of treatment.*

*Where the most recent course of PBS-subsidised infliximab treatment was approved under either of the initial treatment restrictions (i.e. for patients with no prior PBS-subsidised biological therapy or, under this restriction, for patients who have received previous PBS-subsidised biological therapy), patients must have been assessed for response following a minimum of 12 weeks of therapy. This assessment must be provided to Medicare Australia no later than 4 weeks from the date that course was ceased.*

*Where the most recent course of PBS-subsidised infliximab treatment was approved under the continuing treatment criteria, patients must have been assessed for response, and the assessment must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased.*

*The authority application must be made in writing and must include:*

- (1) a completed authority prescription form; and*
- (2) a completed Psoriatic Arthritis PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))].*

*At the time of the authority application, medical practitioners should request the appropriate quantity of vials, based on the weight of the patient, to provide sufficient for a single infusion at a dose of 5 mg per kg. Up to a maximum of 3 repeats may be authorised.*

*Where fewer than 3 repeats are requested at the time of the initial application, authority approvals for sufficient repeats to complete a maximum of 22 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

*Patients who fail to demonstrate a response to treatment with infliximab under this restriction will not be eligible to receive further PBS-subsidised treatment with this drug, in this Treatment Cycle.*

| Code | Item and Section 100 Restriction | Pack Size | Price ex Manufacturer \$ | Proprietary Name and Manufacturer |
|------|----------------------------------|-----------|--------------------------|-----------------------------------|
|------|----------------------------------|-----------|--------------------------|-----------------------------------|

*Once patients fail to respond to treatment with 3 biological agents, they are deemed to have completed this Treatment Cycle and must cease PBS-subsidised therapy. These patients may re-commence a new Biological Treatment Cycle after a minimum of 5 years has elapsed between the date the last prescription for a PBS-subsidised biological agent was approved in this Cycle and the date of the first application under the new Cycle.*

#### **Public and private hospital authority required**

##### ***Initial 3***

*Initial PBS-subsidised supply for continuing treatment with infliximab, by a rheumatologist or clinical immunologist with expertise in the management of psoriatic arthritis, of adults who:*

- (1) have a documented history of severe active psoriatic arthritis; and*
- (2) were receiving treatment with infliximab prior to 16 March 2006; and*
- (3) have demonstrated a response as specified in the criteria for continuing PBS-subsidised treatment with infliximab.*

*The authority application must be made in writing and must include:*

- (1) a completed authority prescription form; and*
  - (2) a completed Psoriatic Arthritis PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))]; and*
  - (3) a copy of the signed patient acknowledgement form which is included in the Supporting Information Form.*
- Completion of this form declares that the patient understands and acknowledges that PBS-subsidised treatment will cease if they do not demonstrate the response to treatment required to support continuation of PBS-subsidised treatment at any assessment where a response must be demonstrated.*

*A maximum of 24 weeks of treatment with infliximab will be authorised under this restriction.*

*At the time of the authority application, medical practitioners should request the appropriate quantity of vials, based on the weight of the patient, to provide sufficient for a single infusion at a dose of 5 mg per kg. Up to a maximum of 2 repeats may be authorised.*

*Where fewer than 2 repeats are requested at the time of the application, authority approvals for sufficient repeats to complete a maximum of 24 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

*Patients who fail to demonstrate a response to treatment with infliximab under this restriction will not be eligible to receive further PBS-subsidised treatment with this drug, in this Treatment Cycle.*

*Patients may qualify for PBS-subsidised treatment under this restriction once only.*

#### **Public and private hospital authority required**

##### ***Continuing treatment***

*Continuing PBS-subsidised treatment with infliximab, by a rheumatologist or clinical immunologist with expertise in the management of psoriatic arthritis, of adults:*

- (1) who have a documented history of severe active psoriatic arthritis; and*
- (2) whose most recent course of PBS-subsidised biological agent for this condition in the current Treatment Cycle was with infliximab; and*
- (3) who, at the time of application, demonstrate an adequate response to treatment with infliximab.*

*An adequate response to treatment with infliximab is defined as:*

*an ESR no greater than 25 mm per hour or a CRP level no greater than 15 mg per L or either marker reduced by at least 20% from baseline; AND either of the following:*

- (i) a reduction in the total active (swollen and tender) joint count by at least 50% from baseline, where baseline is at least 20 active joints; or*
- (ii) a reduction in the number of the following major active joints, from at least 4, by at least 50%:*
  - elbow, wrist, knee and/or ankle (assessed as swollen and tender); and/or*
  - shoulder and/or hip (assessed as pain in passive movement and restriction of passive movement, where pain and limitation of movement are due to active disease and not irreversible damage such as joint destruction or bony overgrowth).*

*The authority application must be made in writing and must include:*

- (1) a completed authority prescription form; and*
- (2) a completed Psoriatic Arthritis PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))].*

|------|----------------------------------|-----------|--------------------------|-----------------------------------|--|
|------|----------------------------------|-----------|--------------------------|-----------------------------------|--|

*All applications for continuing treatment with infliximab must include a measurement of response to the prior course of therapy. This assessment must be provided to Medicare Australia no later than 4 weeks from the cessation of that treatment course. If the application is the first application for continuing treatment with infliximab, it must be accompanied by an assessment of response to a minimum of 12 weeks of treatment with the initial treatment course.*

*At the time of the authority application, medical practitioners should request the appropriate quantity of vials, based on the weight of the patient, to provide sufficient for a single infusion at a dose of 5 mg per kg. Up to a maximum of 2 repeats may be authorised.*

*Where fewer than 2 repeats are requested at the time of the application, authority approvals for sufficient repeats to complete a maximum of 24 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

*Patients who fail to demonstrate a response to treatment with infliximab under this restriction will not be eligible to receive further PBS-subsidised treatment with this drug, in this Treatment Cycle.*

*Once patients fail to respond to treatment with 3 biological agents, they are deemed to have completed this Treatment Cycle and must cease PBS-subsidised therapy. These patients may re-commence a new Biological Treatment Cycle after a minimum of 5 years has elapsed between the date the last prescription for a PBS-subsidised biological agent was approved in this Cycle and the date of the first application under the new Cycle.*

|-------|---------------------------------|---|--------|----------|----|

**NOTE:**

**TREATMENT OF ADULT PATIENTS WITH SEVERE REFRACTORY CROHN DISEASE**

*The following information applies to the prescribing under the Pharmaceutical Benefits Scheme (PBS) of adalimumab and infliximab for adult patients with severe refractory Crohn disease. Where the term 'tumour necrosis factor (TNF) alfa antagonist' appears in the following NOTES and restrictions, it refers to adalimumab and infliximab only.*

*A patient is eligible for PBS-subsidised treatment with only 1 of the 2 TNF-alfa antagonists at any 1 time.*

*From 1 August 2008, under the PBS, all patients will be able to commence a treatment cycle where they may trial each PBS-subsidised TNF-alfa antagonist without having to experience a disease flare when swapping to the alternate agent. Under these interchangeability arrangements, within a single treatment cycle, a patient may continue to receive long-term treatment with a TNF-alfa antagonist while they continue to show a response to therapy.*

*A patient who received PBS-subsidised TNF-alfa antagonist treatment prior to 1 August 2008 is considered to be in their first cycle as of 1 August 2008.*

*Within the same treatment cycle, a patient cannot trial and fail, or cease to respond to, the same PBS-subsidised TNF-alfa antagonist more than twice.*

*Once a patient has either failed or ceased to respond to treatment 3 times, they are deemed to have completed a treatment cycle and they must have, at a minimum, a 5-year break in PBS-subsidised TNF-alfa antagonist therapy before they are eligible to commence the next cycle. The 5-year break is measured from the date of the last approval for PBS-subsidised TNF-alfa antagonist treatment in the most recent cycle to the date of the first application for initial treatment with a TNF-alfa antagonist under the new treatment cycle.*

*A patient who has failed fewer than 3 trials of TNF-alfa antagonists in a treatment cycle and who has a break in therapy of less than 5 years, may commence a further course of treatment within the same treatment cycle.*

*A patient who has failed fewer than 3 trials of TNF-alfa antagonists in a treatment cycle and who has a break in therapy of more than 5 years, may commence a new treatment cycle.*

*There is no limit to the number of treatment cycles a patient may undertake in their lifetime.*

*(1) How to prescribe PBS-subsidised TNF-alfa antagonist therapy after 1 August 2008.*

continued 

| Code | Item and Section 100 Restriction | Pack Size | Price ex Manufacturer \$ | Proprietary Name and Manufacturer |
|------|----------------------------------|-----------|--------------------------|-----------------------------------|
|------|----------------------------------|-----------|--------------------------|-----------------------------------|

**(a) Initial treatment.**

*Applications for initial treatment should be made where:*

- (i) a patient has received no prior PBS-subsidised TNF-alfa antagonist treatment in this treatment cycle and wishes to commence such therapy (Initial 1); or*
- (ii) a patient has received prior PBS-subsidised (initial or continuing) TNF-alfa antagonist therapy and wishes to trial an alternate agent (Initial 2) [further details are under 'Swapping therapy' below]; or*
- (iii) a patient wishes to re-commence treatment with a specific TNF-alfa antagonist following a break in PBS-subsidised therapy with that agent (Initial 2).*

*Initial treatment authorisations will be limited to provide for a maximum of 16 weeks of therapy for adalimumab and 14 weeks of therapy for infliximab.*

*From 1 August 2008, a patient must be assessed for response to any course of initial PBS-subsidised treatment following a minimum of 12 weeks of therapy for adalimumab and up to 12 weeks after the first dose (6 weeks following the third dose) for infliximab, and this assessment must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased.*

*Where a response assessment is not submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with that TNF-alfa antagonist.*

*For second and subsequent courses of PBS-subsidised TNF-alfa antagonist treatment, it is recommended that a patient is reviewed in the month prior to completing their current course of treatment and that an application is posted to Medicare Australia no later than 2 weeks prior to the patient completing their current treatment course.*

*Adalimumab only: Two completed authority prescriptions must be submitted with every initial application for adalimumab. One prescription must be for the induction pack containing a quantity of 6 doses of 40 mg and no repeats. The second prescription must be written for 2 doses of 40 mg and 2 repeats.*

*(b) Continuing treatment. Following the completion of an initial treatment course with a specific TNF-alfa antagonist, a patient may qualify to receive up to 24 weeks of continuing treatment with that drug providing they have demonstrated an adequate response to treatment. The patient remains eligible to receive continuing TNF-alfa antagonist treatment with the same drug in courses of up to 24 weeks providing they continue to sustain the response.*

*It is recommended that a patient be reviewed in the month prior to completing their current course of treatment to ensure uninterrupted TNF-alfa antagonist supply.*

*Assessments of response to a course of PBS-subsidised therapy must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased.*

*Where a response assessment is not submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with that TNF-alfa antagonist.*

**(2) Swapping therapy.**

*Once initial treatment with the first PBS-subsidised TNF-alfa antagonist is approved, a patient may swap if eligible to the alternate TNF-alfa antagonist within the same treatment cycle without having to requalify with respect to the indices of disease severity (i.e. Crohn Disease Activity Index (CDAI) Score, evidence of intestinal inflammation), or the prior corticosteroid therapy and immunosuppressive therapy.*

*A patient may trial the alternate TNF-alfa antagonist at any time, regardless of whether they are receiving therapy (initial or continuing) with a TNF-alfa antagonist at the time of the application. However, they cannot swap to a particular TNF-alfa antagonist if they have failed to respond to prior treatment with that drug two times within the same treatment cycle.*

*To ensure a patient receives the maximum treatment opportunities allowed under the interchangeability arrangements, it is important that they are assessed for response to every course of treatment approved, within the timeframes specified in the relevant restriction.*

*To avoid confusion, an application for a patient who wishes to swap to the alternate TNF-alfa antagonist should be accompanied by the approved authority prescription or remaining repeats for the TNF-alfa antagonist the patient is ceasing.*

**(3) Baseline measurements to determine response.**

| Code | Item and Section 100 Restriction | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

*Medicare Australia will determine whether a response to treatment has been demonstrated based on the baseline measurements of the CDAI or evidence of intestinal inflammation submitted with the first authority application for a TNF- $\alpha$  antagonist. However, prescribers may provide new baseline measurements any time that an initial treatment authority application is submitted within a treatment cycle and Medicare Australia will assess response according to these revised baseline measurements.*

*To ensure consistency in determining response, the same indices of disease severity used to establish baseline at the commencement of treatment with each initial treatment application must be provided for all subsequent continuing treatment applications.*

*(4) Re-commencement of treatment after a 5-year break in PBS-subsidised therapy.*

*A patient who wishes to trial a second or subsequent treatment cycle following a break in PBS-subsidised TNF- $\alpha$  antagonist therapy of at least 5 years, must requalify for initial treatment with respect to the indices of disease severity. Patients must have received treatment with a corticosteroid and at least 1 immunosuppressive agent, at an adequate dose, for a minimum of 3 consecutive months immediately prior to the time the CDAI score or the indices of intestinal inflammation are measured.*

*(5) Patients 'grandfathered' onto PBS-subsidised treatment with adalimumab or infliximab.*

*A patient who commenced treatment with adalimumab for severe refractory Crohn disease prior to 9 November 2007 or infliximab prior to 7 March 2007 and who continues to receive treatment at the time of application, may qualify for treatment under the initial 'grandfather' treatment restriction.*

*A patient may only qualify for PBS-subsidised treatment under this criterion once. A maximum of 24 weeks of treatment with adalimumab or infliximab will be authorised under this criterion.*

*Following completion of the initial PBS-subsidised course, further applications for treatment with adalimumab or infliximab will be assessed under the continuing treatment restriction.*

*'Grandfather' arrangements will only apply for the first treatment cycle. For the second and subsequent cycles, a 'grandfather' patient must requalify for initial treatment under the criteria that apply to a new patient. See 'Re-commencement of treatment after a 5-year break in PBS-subsidised therapy' above for further details.*

#### **Public and private hospital authority required**

##### ***Initial 1 (new patients)***

***Initial treatment of Crohn disease in a patient assessed by CDAI.***

***Initial PBS-subsidised treatment with infliximab by a gastroenterologist or a consultant physician as specified in the NOTE below, of a patient with severe refractory Crohn disease who satisfies the following criteria:***

- (a) has confirmed Crohn disease, defined by standard clinical, endoscopic and/or imaging features, including histological evidence, with the diagnosis confirmed by a gastroenterologist or a consultant physician as specified in the NOTE below; and***
- (b) has signed a patient acknowledgement indicating they understand and acknowledge that PBS-subsidised treatment will cease if they do not meet the predetermined response criterion for ongoing PBS-subsidised treatment, as outlined in the restriction for continuing treatment; and***
- (c) has failed to achieve an adequate response to prior systemic therapy including:***
  - (i) a tapered course of steroids, starting at a dose of at least 40 mg prednisolone (or equivalent), over a 6 week period; and***
  - (ii) immunosuppressive therapy including:***
    - azathioprine at a dose of at least 2 mg per kg daily for 3 or more months; or***
    - 6-mercaptopurine at a dose of at least 1 mg per kg daily for 3 or more months; or***
    - methotrexate at a dose of at least 15 mg weekly for 3 or more months.***

***NOTE: Prescribers must be gastroenterologists (code 87), consultant physicians [internal medicine specialising in gastroenterology (code 81)] or consultant physicians [general medicine specialising in gastroenterology (code 82)].***

***If treatment with any of the above-mentioned drugs is contraindicated according to the relevant TGA-approved Product Information, please provide details at the time of application. .***

| Code | Item and Section 100 Restriction | Pack Size | Price ex Manufacturer \$ | Proprietary Name and Manufacturer |
|------|----------------------------------|-----------|--------------------------|-----------------------------------|
|------|----------------------------------|-----------|--------------------------|-----------------------------------|

*If intolerance to treatment develops during the relevant period of use, which is of a severity necessitating permanent treatment withdrawal, please provide details of the degree of this toxicity at the time of application. Details of the accepted toxicities including severity can be found on the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au)). .*

*The following initiation criterion indicates failure to achieve an adequate response and must be demonstrated in all patients at the time of the application:*

*(a) have a severity of disease activity which results in a Crohn Disease Activity Index (CDAI) Score greater than or equal to 300 as assessed.*

*All tests and assessments should be performed preferably whilst still on treatment, but no longer than 1 month following cessation of the most recent prior treatment.*

*The most recent CDAI assessment must be no more than 1 month old at the time of application.*

*Applications for authorisation must be made in writing and must include:*

*(a) a completed authority prescription form; and*

*(b) a completed Crohn Disease PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))] which includes the following:*

*(i) the completed current Crohn Disease Activity Index (CDAI) calculation sheet including the date of assessment of the patient's condition; and*

*(ii) details of prior systemic drug therapy [dosage, date of commencement and duration of therapy]; and*

*(iii) the signed patient acknowledgement.*

*A maximum quantity and number of repeats to provide for an initial course of infliximab consisting of 3 doses at 5 mg per kg body weight per dose to be administered at weeks 0, 2 and 6, will be authorised.*

*Where fewer than 2 repeats are requested at the time of the application, authority approvals for sufficient repeats to complete the 3 doses of infliximab may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday). Under no circumstances will telephone approvals be granted for initial authority applications, or for treatment that would otherwise extend the initial treatment period.*

*A CDAI assessment of the patient's response to this initial course of treatment must be made up to 12 weeks after the first dose (6 weeks following the third dose) so that there is adequate time for a response to be demonstrated.*

*This assessment, which will be used to determine eligibility for continuing treatment, must be submitted to Medicare Australia no later than 1 month from the date of completion of this initial course of treatment. Where a response assessment is not undertaken and submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with infliximab.*

*It is recommended that an application for continuing treatment is posted to Medicare Australia at the time of the 12 week assessment, to ensure continuity of treatment for those patients who meet the continuation criterion for PBS-subsidised infliximab treatment.*

#### **Public and private hospital authority required**

##### **Initial 2**

*Change or re-commencement of treatment of Crohn disease in a patient assessed by CDAI.*

*Initial PBS-subsidised treatment with infliximab by a gastroenterologist or a consultant physician as specified in the NOTE below of a patient who:*

*(a) has a documented history of severe refractory Crohn disease; and*

*(b) in this treatment cycle, has received prior PBS-subsidised treatment with infliximab or adalimumab for this condition; and*

*(c) has not failed PBS-subsidised therapy with infliximab for this condition more than once in the current treatment cycle.*

*NOTE: Prescribers must be gastroenterologists (code 87), consultant physicians [internal medicine specialising in gastroenterology (code 81)] or consultant physicians [general medicine specialising in gastroenterology (code 82)].*

*To demonstrate a response to treatment the application must be accompanied by the results of the most recent course of TNF-alfa antagonist therapy within the timeframes specified in the relevant restriction.*

| Code | Item and Section 100 Restriction | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

*Where the most recent course of PBS-subsidised TNF-alfa antagonist treatment was approved under an initial treatment restriction, the patient must have been assessed for response to that course following a minimum of 12 weeks of therapy for adalimumab and up to 12 weeks after the first dose (6 weeks following the third dose) for infliximab and this assessment must be submitted to Medicare Australia no later than 4 weeks from the date that course was ceased.*

*If the response assessment to the previous course of TNF-alfa antagonist treatment is not submitted as detailed above, the patient will be deemed to have failed therapy with that particular course of TNF-alfa antagonist.*

*Authority applications must be made in writing and must include:*

- (a) a completed authority prescription form; and*
- (b) a completed Crohn Disease PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))] which includes the following:*
  - (i) the completed current Crohn Disease Activity Index (CDAI) Score calculation sheet including the date of the assessment of the patient's condition; and*
  - (ii) details of prior TNF alfa antagonist treatment including details of date and duration of treatment.*

*A maximum quantity and number of repeats to provide for an initial course of infliximab consisting of 3 doses at 5 mg per kg body weight per dose to be administered at weeks 0, 2 and 6, will be authorised.*

*Where fewer than 2 repeats are requested at the time of the application, authority approvals for sufficient repeats to complete the 3 doses of infliximab may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday). Under no circumstances will telephone approvals be granted for initial authority applications, or for treatment that would otherwise extend the initial treatment period.*

*A CDAI assessment of the patient's response to this initial course of treatment must be made up to 12 weeks after the first dose (6 weeks following the third dose) for infliximab so that there is adequate time for a response to be demonstrated.*

*This assessment, which will be used to determine eligibility for continuing treatment, must be submitted to Medicare Australia no later than 1 month from the date of completion of this initial course of treatment. Where a response assessment is not undertaken and submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with infliximab.*

*It is recommended that an application for continuing treatment is posted to Medicare Australia at the time of the 12 week assessment, to ensure continuity of treatment for those patients who meet the continuation criterion for PBS-subsidised infliximab treatment.*

#### **Public and private hospital authority required**

*Continuing treatment of Crohn disease in a patient assessed by CDAI.*

*Continuing PBS-subsidised treatment with infliximab by a gastroenterologist, a consultant physician as specified in the NOTE below or other consultant physician in consultation with a gastroenterologist, of a patient who:*

- (a) has a documented history of severe refractory Crohn disease; and*
- (b) has demonstrated or sustained an adequate response to treatment with infliximab.*

*NOTE: Prescribers must be gastroenterologists (code 87), consultant physicians [internal medicine specialising in gastroenterology (code 81)] or consultant physicians [general medicine specialising in gastroenterology (code 82)].*

*An adequate response to infliximab treatment is defined as a reduction in Crohn Disease Activity Index (CDAI) Score to a level no greater than 150.*

*Applications for authorisation must be made in writing and must include:*

- (a) a completed authority prescription form; and*
- (b) a completed Crohn Disease PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))] which includes the following:*
  - (i) the completed Crohn Disease Activity Index (CDAI) Score calculation sheet including the date of the assessment of the patient's condition.*

*The CDAI assessment must be no more than 1 month old at the time of application.*

*If the application is the first application for continuing treatment with infliximab, a CDAI assessment of the patient's response must be made up to 12 weeks after the first dose so that there is adequate time for a response to be demonstrated.*

| Code | Item and Section 100 Restriction | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

*The assessment of the patient's response to a continuing course of therapy must be made within the 4 weeks prior to completion of that course and posted to Medicare Australia no less than 2 weeks prior to the date the next dose is scheduled, in order to ensure continuity of treatment for those patients who meet the continuation criterion.*

*Where an assessment is not submitted to Medicare Australia within these timeframes, patients will be deemed to have failed to respond, or to have failed to sustain a response, to treatment with infliximab.*

*Patients are eligible to receive continuing infliximab treatment in courses of up to 24 weeks providing they continue to sustain the response.*

*At the time of the authority application, medical practitioners should request the appropriate number of vials, based on the weight of the patient, to provide sufficient for a single infusion at a dose of 5 mg per kg. Up to a maximum of 2 repeats will be authorised. No applications for increased repeats will be authorised.*

*Where fewer than 2 repeats are requested at the time of application, authority approvals for sufficient repeats to complete a maximum of 24 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

#### **Public and private hospital authority required**

##### ***Initial 1***

*Initial treatment of Crohn disease in a patient with short gut syndrome or an ostomy patient.*

*Initial PBS-subsidised treatment with infliximab by a gastroenterologist, or consultant physician as specified in the NOTE below of a patient who satisfies the following criteria:*

- (a) has confirmed Crohn disease defined by standard clinical, endoscopic and/or imaging features, including histological evidence with the diagnosis confirmed by a gastroenterologist or consultant physician as specified in the NOTE below; and*
- (b) has diagnostic imaging or surgical evidence of short gut syndrome or has an ileostomy or colostomy; and*
- (c) has evidence of intestinal inflammation; and*
- (d) has signed a patient acknowledgement indicating they understand and acknowledge that PBS-subsidised treatment will cease if they do not meet the predetermined response criterion for ongoing PBS-subsidised treatment, as outlined in the restriction for continuing treatment; and*
- (e) has failed to achieve an adequate response to prior systemic drug therapy including:*
  - (i) a tapered course of steroids, starting at a dose of at least 40 mg prednisolone (or equivalent), over a 6 week period; and*
  - (ii) immunosuppressive therapy including:*
    - azathioprine at a dose of at least 2 mg per kg daily for 3 or more months; or*
    - 6-mercaptopurine at a dose of at least 1 mg per kg daily for 3 or more months; or*
    - methotrexate at a dose of at least 15 mg weekly for 3 or more months.*

*NOTE: Prescribers must be gastroenterologists (code 87), consultant physicians [internal medicine specialising in gastroenterology (code 81)] or consultant physicians [general medicine specialising in gastroenterology (code 82)].*

*An adequate response to infliximab treatment is defined as:*

*(a) improvement of intestinal inflammation as demonstrated by:*

*(i) blood: normalisation of the platelet count, or an erythrocyte sedimentation rate (ESR) level no greater than 25 mm per hour, or a C-reactive protein (CRP) level no greater than 15 mg per L; AND/OR*

*(ii) faeces: normalisation of lactoferrin or calprotectin level; AND/OR*

*(iii) evidence of mucosal healing, as demonstrated by diagnostic imaging findings, compared to the baseline assessment; or*

*(b) reversal of high faecal output state; or*

*(c) avoidance of the need for surgery or total parenteral nutrition (TPN).*

*Applications for authorisation must be made in writing and must include:*

*(a) a completed authority prescription; and*

*(b) a completed Crohn Disease PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))] which includes the following:*

*(i) the reports and dates of the pathology or diagnostic imaging test(s) used to assess response to therapy or the date of clinical assessment.*

*The patient's assessment must be no more than 1 month old at the time of application.*

*If the application is the first application for continuing treatment with infliximab, an assessment of the patient's response to this initial course of treatment must be made up to 12 weeks after the first dose (6 weeks following the third dose) so that there is adequate time for a response to be demonstrated.*

*The assessment of the patient's response to a continuing course of therapy must be made within the 4 weeks prior to completion of that course and posted to Medicare Australia no less than 2 weeks prior to the date the next dose is scheduled, in order to ensure continuity of treatment for those patients who meet the continuation criterion.*

*Where an assessment is not submitted to Medicare Australia within these timeframes, patients will be deemed to have failed to respond, or to have failed to sustain a response, to treatment with infliximab.*

*Patients are eligible to receive continuing infliximab treatment in courses of up to 24 weeks providing they continue to sustain the response.*

*At the time of the authority application, medical practitioners should request the appropriate number of vials, based on the weight of the patient, to provide sufficient for a single infusion at a dose of 5 mg per kg. Up to a maximum of 2 repeats will be authorised. No applications for increased repeats will be authorised.*

*Where fewer than 2 repeats are requested at the time of the application, authority approvals for sufficient repeats to complete a maximum of 24 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

#### **Public and private hospital authority required**

##### **Initial 1**

*Initial treatment of Crohn disease in a patient with extensive small intestine disease.*

continued ➞

| Code | Item and Section 100 Restriction | Pack<br>Size | Price ex<br>Manufacturer<br>\$ | Proprietary<br>Name and<br>Manufacturer |
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|
|------|----------------------------------|--------------|--------------------------------|-----------------------------------------|

*Initial PBS-subsidised treatment with infliximab by a gastroenterologist or a consultant physician as specified in the NOTE below, of a patient with severe refractory Crohn disease who satisfies the following criteria:*

*(a) has confirmed Crohn disease, defined by standard clinical, endoscopic and/or imaging features, including histological evidence, with the diagnosis confirmed by a gastroenterologist or consultant physician as specified in the NOTE below; and*

*(b) has extensive small intestinal disease with radiological evidence of intestinal inflammation affecting more than 50 cm of the small intestine; and*

*(c) has signed a patient acknowledgement indicating they understand and acknowledge that PBS-subsidised treatment will cease if they do not meet the predetermined response criterion for ongoing PBS-subsidised treatment, as outlined in the restriction for continuing treatment; and*

*(d) has failed to achieve an adequate response to prior systemic therapy including:*

*(i) a tapered course of steroids, starting at a dose of at least 40 mg prednisolone (or equivalent), over a 6 week period; and*

*(ii) immunosuppressive therapy including:*

*— azathioprine at a dose of at least 2 mg per kg daily for 3 or more months; or*

*— 6-mercaptopurine at a dose of at least 1 mg per kg daily for 3 or more months; or*

*— methotrexate at a dose of at least 15 mg weekly for 3 or more months.*

*NOTE: Prescribers must be gastroenterologists (code 87), consultant physicians [internal medicine specialising in gastroenterology (code 81)] or consultant physicians [general medicine specialising in gastroenterology (code 82)].*

*If treatment with any of the above-mentioned drugs is contraindicated according to the relevant TGA-approved Product Information, please provide details at the time of application.*

*If intolerance to treatment develops during the relevant period of use, which is of a severity necessitating permanent treatment withdrawal, please provide details of the degree of this toxicity at the time of application.*

*Details of the accepted toxicities including severity can be found on the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au)).*

*The following initiation criteria indicate failure to achieve an adequate response and must be demonstrated in all patients at the time of the application:*

*(a) have severity of disease activity which results in a Crohn Disease Activity Index (CDAI) Score greater than or equal to 220;*

*AND/OR*

*(b) have evidence of active intestinal inflammation, including:*

*(i) blood: higher than normal platelet count, or, an elevated erythrocyte sedimentation rate (ESR) greater than 25 mm per hour, or, a C-reactive protein (CRP) level greater than 15 mg per L; AND/OR*

*(ii) faeces: higher than normal lactoferrin or calprotectin level; AND/OR*

*(iii) diagnostic imaging: demonstration of increased uptake of intravenous contrast with thickening of the bowel wall or mesenteric lymphadenopathy or fat streaking in the mesentery;*

*AND/OR*

*(c) be assessed clinically as being in a high faecal output state;*

*AND/OR*

*(d) be assessed clinically as requiring surgery or total parenteral nutrition (TPN) as the next therapeutic option, in the absence of infliximab.*

*All tests and assessments should be performed preferably whilst still on treatment, but no longer than 1 month following cessation of the most recent prior treatment.*

*Any one of the baseline criteria may be used to determine response to an initial course of treatment and eligibility for continued therapy, according to the criteria included in the continuing treatment restriction. However, the same criterion must be used for any subsequent determination of response to treatment, for the purpose of eligibility for continuing PBS-subsidised therapy.*

| Code | Item and Section 100 Restriction | Pack Size | Price ex Manufacturer \$ | Proprietary Name and Manufacturer |
|------|----------------------------------|-----------|--------------------------|-----------------------------------|
|------|----------------------------------|-----------|--------------------------|-----------------------------------|

*Applications for authorisation must be made in writing and must include:*

- (a) a completed authority prescription form; and*
- (b) a completed Crohn Disease PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))] which includes the following:*
  - (i) details of prior systemic drug therapy [dosage, date of commencement and duration of therapy]; and*
  - (ii) (1) reports and dates of the pathology or diagnostic imaging test(s) nominated as the response criterion, if relevant; or*
  - (2) the completed current Crohn Disease Activity Index (CDAI) calculation sheet including the dates of assessment of the patient's condition, if relevant; and*
  - (iii) date of the most recent clinical assessment; and*
  - (iv) the signed patient acknowledgement.*

*All assessments, pathology tests and diagnostic imaging studies must be made within 1 month of the date of application.*

*A maximum quantity and number of repeats to provide for an initial course of infliximab consisting of 3 doses at 5 mg per kg body weight per dose to be administered at weeks 0, 2 and 6, will be authorised.*

*Where fewer than 2 repeats are requested at the time of the application, authority approvals for sufficient repeats to complete the 3 doses of infliximab may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday). Under no circumstances will telephone approvals be granted for initial authority applications, or for treatment that would otherwise extend the initial treatment period.*

*The assessment of the patient's response to this initial course of treatment must be made up to 12 weeks after the first dose (6 weeks following the third dose) so that there is adequate time for a response to be demonstrated.*

*This assessment, which will be used to determine eligibility for continuing treatment, must be submitted to Medicare Australia no later than 1 month from the date of completion of this initial course of treatment. Where a response assessment is not undertaken and submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with infliximab.*

*It is recommended that an application for continuing treatment is posted to Medicare Australia at the time of the 12 week assessment, to ensure continuity of treatment for those patients who meet the continuation criterion for PBS-subsidised infliximab treatment.*

#### **Public and private hospital authority required**

*Continuing treatment of Crohn disease in a patient with extensive small intestine disease.*

*Continuing PBS-subsidised treatment with infliximab by a gastroenterologist, or consultant physician as specified in the NOTE below or other consultant physician in consultation with a gastroenterologist, of a patient who:*

- (a) has a documented history of severe refractory Crohn disease with extensive intestinal inflammation affecting more than 50 cm of the small intestine; and*
- (b) has demonstrated or sustained an adequate response to treatment with infliximab.*

*NOTE: Prescribers must be gastroenterologists (code 87), consultant physicians [internal medicine specialising in gastroenterology (code 81)] or consultant physicians [general medicine specialising in gastroenterology (code 82)].*

*An adequate response to infliximab treatment is defined as:*

- (a) a reduction in Crohn Disease Activity Index (CDAI) Score to no greater than 150; or*
- (b) improvement of intestinal inflammation as demonstrated by:*
  - (i) blood: normalisation of the platelet count, or an erythrocyte sedimentation rate (ESR) level no greater than 25 mm per hour, or a C-reactive protein (CRP) level no greater than 15 mg per L; AND/OR*
  - (ii) faeces: normalisation of lactoferrin or calprotectin level; AND/OR*
  - (iii) evidence of mucosal healing, as demonstrated by diagnostic imaging findings, compared to the baseline assessment; or*
  - (c) reversal of high faecal output state; or*
  - (d) avoidance of the need for surgery or total parenteral nutrition (TPN).*

| Code | Item and Section 100 Restriction | Pack Size | Price ex Manufacturer \$ | Proprietary Name and Manufacturer |
|------|----------------------------------|-----------|--------------------------|-----------------------------------|
|------|----------------------------------|-----------|--------------------------|-----------------------------------|

*Initial PBS-subsidised treatment by a gastroenterologist, paediatrician or consultant physician as specified in the NOTE below, of a patient aged 6 to 17 years inclusive with moderate to severe refractory Crohn disease who satisfies the following criteria:*

*(a) has confirmed Crohn disease, defined by standard clinical, endoscopic and/or imaging features, including histological evidence, with the diagnosis confirmed by a gastroenterologist or consultant physician as specified in the NOTE below; and*

*(b) whose parent or authorised guardian has signed a patient acknowledgement indicating they understand and acknowledge that PBS-subsidised treatment will cease if they do not meet the predetermined response criterion for ongoing PBS-subsidised treatment, as outlined in the restriction for continuing treatment; and*

*(c) has failed to achieve an adequate response to 2 of the following 3 conventional prior therapies including:*

*(i) a tapered course of steroids, starting at a dose of at least 40 mg prednisolone (or equivalent), over a 6 week period;*

*(ii) an 8 week course of enteral nutrition;*

*(iii) immunosuppressive therapy including:*

*— azathioprine at a dose of at least 2 mg per kg daily for 3 or more months; or*

*— 6-mercaptopurine at a dose of at least 1 mg per kg daily for 3 or more months; or*

*— methotrexate at a dose of at least 10 mg per square metre weekly for 3 or more months.*

**NOTE:** Prescribers must be gastroenterologists (code 87), consultant physicians [internal medicine specialising in gastroenterology (code 81)] or consultant physicians [general medicine specialising in gastroenterology (code 82)].

*If treatment with any of the above-mentioned drugs is contraindicated according to the relevant TGA-approved Product Information, please provide details at the time of application.*

*If intolerance to treatment develops during the relevant period of use, which is of a severity necessitating permanent treatment withdrawal, please provide details of the degree of this toxicity at the time of application.*

*Details of the accepted toxicities including severity can be found on the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au)).*

*The following initiation criterion indicates failure to achieve an adequate response and must be demonstrated in all patients at the time of the application:*

*(a) severity of disease activity which results in a Paediatric Crohn Disease Activity Index (PCDAI) Score greater than or equal to 30 as assessed, preferably whilst still on treatment, but no longer than 1 month following cessation of the most recent prior treatment.*

*(b) The most recent PCDAI assessment must be no more than 1 month old at the time of application.*

*All tests and assessments should be performed preferably whilst still on treatment, but no longer than 1 month following cessation of the most recent prior treatment.*

*Applications for authorisation must be made in writing and must include:*

*(a) a completed authority prescription form; and*

*(b) a completed Crohn Disease PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))] which includes the following:*

*(i) the completed current Paediatric Crohn Disease Activity Index (PCDAI) calculation sheet including the date of assessment of the patient's condition; and*

*(ii) details of previous systemic drug therapy [dosage, date of commencement and duration of therapy], or dates of enteral nutrition; and*

*(iii) the signed patient acknowledgement.*

*A maximum quantity and number of repeats to provide for an initial course of infliximab consisting of 3 doses at 5 mg per kg body weight per dose to be administered at weeks 0, 2 and 6, will be authorised.*

*Where fewer than 2 repeats are requested at the time of the application, authority approvals for sufficient repeats to complete the 3 doses of infliximab may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday). Under no circumstances will telephone approvals be granted for initial authority applications, or for treatment that would otherwise extend the initial treatment period.*

*A PCDAI assessment of the patient's response to this initial course of treatment must be made up to 12 weeks after the first dose (6 weeks following the third dose) so that there is adequate time for a response to be demonstrated.*

| Code | Item and Section 100 Restriction | Pack Size | Price ex Manufacturer \$ | Proprietary Name and Manufacturer |
|------|----------------------------------|-----------|--------------------------|-----------------------------------|
|------|----------------------------------|-----------|--------------------------|-----------------------------------|

*This assessment, which will be used to determine eligibility for continuing treatment, must be submitted to Medicare Australia no later than 1 month from the date of completion of this initial course of treatment. Where a response assessment is not undertaken and submitted to Medicare Australia within these timeframes, the patient will be deemed to have failed to respond to treatment with infliximab.*

*It is recommended that an application for continuing treatment is posted to Medicare Australia at the time of the 12 week assessment, to ensure continuity of treatment for those patients who meet the continuation criterion for PBS-subsidised infliximab treatment.*

#### **Public and private hospital authority required**

*Continuing treatment of Crohn disease in a patient initiated on PBS-subsidised treatment as a paediatric patient.*

*Continuing PBS-subsidised treatment with infliximab by a gastroenterologist, paediatrician, consultant physician as specified in the NOTE below or other consultant physician in consultation with a gastroenterologist, of a patient who:*

- (a) has a documented history of moderate to severe refractory Crohn disease; and*
- (b) has demonstrated or sustained an adequate response to treatment with infliximab.*

*NOTE: Prescribers must be gastroenterologists (code 87), consultant physicians [internal medicine specialising in gastroenterology (code 81)] or consultant physicians [general medicine specialising in gastroenterology (code 82)].*

*An adequate response to infliximab treatment is defined as a reduction in Paediatric Crohn Disease Activity Index (PCDAI) Score by at least 15 points as compared to baseline AND a total PCDAI score of 30 points or less.*

*Applications for authorisation must be made in writing and must include:*

- (a) a completed authority prescription form; and*
- (b) a completed Crohn Disease PBS Authority Application - Supporting Information Form [may be downloaded from the Medicare Australia website ([www.medicareaustralia.gov.au](http://www.medicareaustralia.gov.au))] which includes the following:*
  - (i) the completed Paediatric Crohn Disease Activity Index (PCDAI) calculation sheet along with the date of the assessment of the patient's condition.*

*The PCDAI assessment must be no more than 1 month old at the time of application.*

*If the application is the first application for continuing treatment with infliximab, a PCDAI assessment of the patient's response must be made up to 12 weeks after the first dose so that there is adequate time for a response to be demonstrated.*

*The assessment of the patient's response to a continuing course of therapy must be made within the 4 weeks prior to completion of that course and posted to Medicare Australia no less than 2 weeks prior to the date the next dose is scheduled, in order to ensure continuity of treatment for those patients who meet the continuation criterion.*

*Where an assessment is not submitted to Medicare Australia within these timeframes, patients will be deemed to have failed to respond, or to have failed to sustain a response, to treatment with infliximab.*

*Patients are eligible to receive continuing infliximab treatment in courses of up to 24 weeks providing they continue to sustain the response.*

*Patients who fail to demonstrate or sustain a response to treatment with infliximab for Crohn disease as specified in the criteria for continuing treatment with infliximab, will not be eligible to receive PBS-subsidised treatment with this drug within 12 months of the date on which treatment was ceased.*

*At the time of the authority application, medical practitioners should request the appropriate number of vials, based on the weight of the patient, to provide sufficient for a single infusion at a dose of 5 mg per kg. Up to a maximum of 2 repeats will be authorised. No applications for increased repeats will be authorised.*

*Where fewer than 2 repeats are requested at the time of the application, authority approvals for sufficient repeats to complete a maximum of 24 weeks of treatment may be requested by telephone by contacting Medicare Australia on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).*

#### **Public and private hospital authority required**

*Initial PBS-subsidised treatment of Crohn disease in a paediatric patient who has previously received non-PBS-subsidised therapy with infliximab.*
