Summary of Changes

These changes to the Schedule of Pharmaceutical Benefits are effective from 1 March 2016. The Schedule is updated on the first day of each month and is available on the internet at www.pbs.gov.au.

Efficient Funding of Chemotherapy (Private Hospital)

Deletions

Deletion – Brand

7253R *Oxaliplatin MYX, YN* – **OXALIPLATIN**, oxaliplatin 100 mg/20 mL injection, 1 x 20 mL vial

Alterations

Alteration – Manufacturer Code

		<i>From</i>	<i>To</i>
7230M	<i>Liposomal Doxorubicin SUN</i> – DOXORUBICIN HYDROCHLORIDE-PEGYLATED LIPOSOMAL , doxorubicin hydrochloride-pegylated liposomal 20 mg/10 mL injection, 1 x 10 mL vial	ZF	RA
7230M	<i>Liposomal Doxorubicin SUN</i> – DOXORUBICIN HYDROCHLORIDE-PEGYLATED LIPOSOMAL , doxorubicin hydrochloride-pegylated liposomal 50 mg/25 mL injection, 1 x 25 mL vial	ZF	RA
7246J	<i>Gemcitabine Sun</i> – GEMCITABINE , gemcitabine 200 mg injection, 1 x 200 mg vial	ZF	RA
7246J	<i>Gemcitabine Sun</i> – GEMCITABINE , gemcitabine 1 g injection, 1 x 1 g vial	ZF	RA
7253R	<i>Oxaliplatin SUN</i> – OXALIPLATIN , oxaliplatin 50 mg/10 mL injection, 1 x 10 mL vial	ZF	RA
7253R	<i>Oxaliplatin SUN</i> – OXALIPLATIN , oxaliplatin 100 mg/20 mL injection, 1 x 20 mL vial	ZF	RA
7253R	<i>Oxaliplatin SUN</i> – OXALIPLATIN , oxaliplatin 200 mg/40 mL injection, 1 x 40 mL vial	ZF	RA

Advance Notices

1 May 2016

Deletion – Brand

7233Q *Fludara, GZ* – **FLUDARABINE**, fludarabine phosphate 50 mg injection, 5 x 50 mg vials

Efficient Funding of Chemotherapy (Public Hospital)

Deletions

Deletion – Brand

4542C *Oxaliplatin MYX, YN* – **OXALIPLATIN**, oxaliplatin 100 mg/20 mL injection, 1 x 20 mL vial

Alterations

Alteration – Manufacturer Code

		<i>From</i>	<i>To</i>
4364Q	<i>Liposomal Doxorubicin SUN</i> – DOXORUBICIN HYDROCHLORIDE-PEGYLATED LIPOSOMAL , doxorubicin hydrochloride-pegylated liposomal 20 mg/10 mL injection, 1 x 10 mL vial	ZF	RA
4364Q	<i>Liposomal Doxorubicin SUN</i> – DOXORUBICIN HYDROCHLORIDE-PEGYLATED	ZF	RA

	LIPOSOMAL , doxorubicin hydrochloride-pegylated liposomal 50 mg/25 mL injection, 1 x 25 mL vial		
4439P	<i>Gemcitabine Sun</i> – GEMCITABINE , gemcitabine 200 mg injection, 1 x 200 mg vial	ZF	RA
4439P	<i>Gemcitabine Sun</i> – GEMCITABINE , gemcitabine 1 g injection, 1 x 1 g vial	ZF	RA
4542C	<i>Oxaliplatin SUN</i> – OXALIPLATIN , oxaliplatin 50 mg/10 mL injection, 1 x 10 mL vial	ZF	RA
4542C	<i>Oxaliplatin SUN</i> – OXALIPLATIN , oxaliplatin 100 mg/20 mL injection, 1 x 20 mL vial	ZF	RA
4542C	<i>Oxaliplatin SUN</i> – OXALIPLATIN , oxaliplatin 200 mg/40 mL injection, 1 x 40 mL vial	ZF	RA

Advance Notices

1 May 2016

Deletion – Brand

4393F *Fludara, GZ* – **FLUDARABINE**, fludarabine phosphate 50 mg injection, 5 x 50 mg vials

Related Pharmaceutical Benefits for Public Hospital use Alterations

Alteration – Restriction

5904R **FOLINIC ACID**, folinic acid 15 mg tablet, 10 (*Leucovorin Calcium (Hospira Pty Limited)*)

About the Supplement

The Schedule of Pharmaceutical Benefits – Efficient Funding of Chemotherapy supplement lists items distributed under section 100 of the National Health Act 1953.

The Supplement is published and is effective on the first day of each month. For detailed information about the prescribing and supply of chemotherapy benefits go to www.pbs.gov.au.

For information about the operational aspects of the Efficient Funding of Chemotherapy, such as, claiming, authority applications and stationery supplies contact the Department of Human Services at www.humanservices.gov.au.

This supplement is split into three parts:

Chemotherapy items for private hospital use. This includes items subject to the revised arrangements, ie. chemotherapy drugs administered through infusion or injection

Chemotherapy items for public hospital use. This includes items subject to the revised arrangements, ie. chemotherapy drugs administered through infusion or injection

PBS products available for private and public hospital use may be dispensed in accordance with the relevant section 100 special arrangements through community pharmacy.

Related pharmaceutical benefits for public hospital use. This includes items such as antiemetics, antinauseants, immunostimulants and detoxifying agents for antineoplastic treatment

Symbols used in the Efficient Funding of Chemotherapy supplement

- * An asterisk in the dispensed price column indicates that the manufacturer's pack does not coincide with the maximum quantity
- ‡ A double dagger in the maximum quantity column indicates where the maximum quantity has been determined to match the manufacturer's pack. These packs cannot be broken and the maximum quantity should be supplied and claimed
- ^a or ^b Located immediately before brand names of an item indicates that the brands are equivalent for the purposes of substitution. These brands may be interchanged without differences in clinical effect

Remuneration arrangements

Fees payable per item claimed:

Section 90 Community Pharmacy (incl. section 92 approved practitioners)

- Ready Prepared Dispensing Fee (\$6.93)
- Preparation fee (\$82.67)
- Distribution fee (\$25.59)
- Diluent fee (\$5.07)

Section 94 Approved Public Hospital Authority

- Preparation fee (\$82.67)

Section 94 Approved Private Hospital Authority

- Ready Prepared Dispensing Fee (\$6.93)
- Preparation fee (\$82.67)
- Distribution fee (\$25.59) (not payable where the drug is trastuzumab)
- Diluent fee (\$5.07)

■ ANTINEOPLASTIC AND IMMUNOMODULATING AGENTS

■ ANTINEOPLASTIC AGENTS

ALKYLATING AGENTS

Nitrogen mustard analogues

■ CYCLOPHOSPHAMIDE

Injection

7226H	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	2800 mg	17	..	*209.75	38.30	Endoxan [BX] (cyclophosphamide 1 g injection, 1 x 1 g vial) Endoxan [BX] (cyclophosphamide 2 g injection, 1 x 2 g vial) Endoxan [BX] (cyclophosphamide 500 mg injection, 1 x 500 mg vial)

■ IFOSFAMIDE

Injection

7248L	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	4000 mg	19	..	*365.78	38.30	Holoxan [BX] (ifosfamide 1 g injection, 1 x 1 g vial) Holoxan [BX] (ifosfamide 2 g injection, 1 x 2 g vial)

Nitrosoureas

■ FOTEMUSTINE

Authority required (STREAMLINED)

3181

Metastatic malignant melanoma

Injection

7245H	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	220 mg	8	..	*2319.28	38.30	Muphoran [SE] (fotemustine 208 mg injection [1 x 208 mg vial] (&) inert substance diluent [1 x 4 mL ampoule], 1 pack)

ANTIMETABOLITES

Folic acid analogues

■ METHOTREXATE

Injection

7250N	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	250 mg	5	..	*157.86	38.30	Hospira Pty Limited [HH] (methotrexate 1 g/10 mL injection, 1 x 10 mL vial) Hospira Pty Limited [HH] (methotrexate 5 mg/2 mL injection, 5 x 2 mL vials) Hospira Pty Limited [HH] (methotrexate 50 mg/2 mL injection, 5 x 2 mL vials) Hospira Pty Limited [HH] (methotrexate 500 mg/20 mL injection, 1 x 20 mL vial) Methaccord [EA] (METHOTREXATE Injection 50 mg in 2 mL, 1) Methaccord [EA] (methotrexate 1 g/10 mL injection, 1 x 10 mL vial) Methotrexate Ebewe [SZ] (methotrexate 5 g/50 mL injection, 1 x 50 mL vial) Methotrexate MYX [YN] (METHOTREXATE Injection 50 mg in 2 mL, 1) Methotrexate MYX [YN] (methotrexate 1 g/10 mL injection, 1 x 10 mL vial)

■ METHOTREXATE

Restricted benefit

Patients receiving treatment with a high dose regimen.

Injection

7251P	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	20000 mg	*965.02	38.30	Hospira Pty Limited [HH] (methotrexate 1 g/10 mL injection, 1 x 10 mL vial) Hospira Pty Limited [HH] (methotrexate 5 mg/2 mL injection, 5 x 2 mL vials)

Hospira Pty Limited [HH] (methotrexate 50 mg/2 mL injection, 5 x 2 mL vials)
 Hospira Pty Limited [HH] (methotrexate 500 mg/20 mL injection, 1 x 20 mL vial)
 Methaccord [EA] (METHOTREXATE Injection 50 mg in 2 mL, 1)
 Methaccord [EA] (methotrexate 1 g/10 mL injection, 1 x 10 mL vial)
 Methotrexate Ebewe [SZ] (methotrexate 5 g/50 mL injection, 1 x 50 mL vial)
 Methotrexate MYX [YN] (METHOTREXATE Injection 50 mg in 2 mL, 1)
 Methotrexate MYX [YN] (methotrexate 1 g/10 mL injection, 1 x 10 mL vial)

▪ **PEMETREXED**

Authority required (STREAMLINED)

4792

Locally advanced or metastatic non-small cell lung cancer

Clinical criteria:

Patient must have received prior treatment with platinum-based chemotherapy.

The patient's body surface area (BSA) must be documented in the patient's medical records at the time the treatment cycle is initiated

Doses greater than 500 mg per metre squared BSA are not PBS-subsidised

Authority required (STREAMLINED)

4789

Mesothelioma

Clinical criteria:

The treatment must be in combination with cisplatin.

The patient's body surface area (BSA) must be documented in the patient's medical records at the time the treatment cycle is initiated

Doses greater than 500 mg per metre squared BSA are not PBS-subsidised

Injection

7255W	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	1100 mg	5	..	*3600.00	38.30	Alimta [LY] (pemetrexed 100 mg injection, 1 x 100 mg vial) Alimta [LY] (pemetrexed 500 mg injection, 1 x 500 mg vial) DBL Pemetrexed [HH] (pemetrexed 100 mg injection, 1 x 100 mg vial) DBL Pemetrexed [HH] (pemetrexed 500 mg injection, 1 x 500 mg vial) Pemetrexed APOTEX [TX] (pemetrexed 100 mg injection, 1 x 100 mg vial) Pemetrexed APOTEX [TX] (pemetrexed 500 mg injection, 1 x 500 mg vial) Pemetrexed DRLA [RZ] (pemetrexed 500 mg injection, 1 x 500 mg vial) Pemetrexed Juno [JU] (pemetrexed 100 mg injection, 1 x 100 mg vial) Pemetrexed Juno [JU] (pemetrexed 500 mg injection, 1 x 500 mg vial) Pemetrexed MYX [YN] (pemetrexed 100 mg injection, 1 x 100 mg vial) Pemetrexed MYX [YN] (pemetrexed 500 mg injection, 1 x 500 mg vial) Pemetrexed Sandoz [SZ] (pemetrexed 500 mg injection, 1 x 500 mg vial) Reladdin [AF] (pemetrexed 100 mg injection, 1 x 100 mg vial) Reladdin [AF] (pemetrexed 500 mg injection, 1 x 500 mg vial)

▪ **RALTITREXED**

Authority required (STREAMLINED)

3185

For use as a single agent in the treatment of advanced colorectal cancer

Injection

7256X	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	7 mg	8	..	*1422.10	38.30	Tomudex [HH] (raltitrexed 2 mg injection, 1 x 2 mg vial)

Purine analogues

CLADRIBINE

Authority required (STREAMLINED)

3180

Hairy cell leukaemia

Injection

7225G	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	17 mg	6	..	*1419.12	38.30	Leustatin [JC] (cladribine 10 mg/10 mL injection, 1 x 10 mL vial) Litak [OA] (cladribine 10 mg/5 mL injection, 1 x 5 mL vial)

FLUDARABINE

Note Pharmaceutical benefits that have the form fludarabine phosphate powder for I.V. injection 50 mg (after reconstitution) and pharmaceutical benefits that have the form fludarabine phosphate solution for I.V. injection 50 mg are equivalent for the purposes of substitution.

Authority required (STREAMLINED)

3887

B-cell chronic lymphocytic leukaemia in combination with cyclophosphamide where the patient has advanced disease (Binet Stage B or C) or evidence of progressive Stage A disease.

Stage A progressive disease is defined by at least one of the following: persistent rise in lymphocyte count with doubling time less than 12 months; a downward trend in haemoglobin or platelets, or both; more than 50% increase in the size of liver, spleen, or lymph nodes, or appearance of these signs if not previously present; constitutional symptoms attributable to disease.

The diagnosis of chronic lymphocytic leukaemia (CLL) must have been established based on:

- a lymphocytosis, with more than 5,000 million lymphocytes per L in the peripheral blood; and
- a clonal population of B-cells (CD5/CD19) documented by flow cytometry

Injection

7233Q	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	55 mg	29	..	*144.28	38.30	Fludara [GZ] (fludarabine phosphate 50 mg injection, 5 x 50 mg vials) Fludarabine Ebewe [SZ] (fludarabine phosphate 50 mg/2 mL injection, 5 x 2 mL vials)

Pyrimidine analogues

CYTARABINE

Injection

7227J	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	7000 mg	15	..	*836.36	38.30	Pfizer Australia Pty Ltd [PF] (cytarabine 100 mg/5 mL injection, 5 x 5 mL vials)

FLUOROURACIL

Restricted benefit

For patients requiring administration of fluorouracil by intravenous infusion.

Injection

7234R	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	5500 mg	11	..	*171.74	38.30	DBL Fluorouracil Injection BP [HH] (fluorouracil 1 g/20 mL injection, 5 x 20 mL vials) DBL Fluorouracil Injection BP [HH] (fluorouracil 2.5 g/50 mL injection, 1 x 50 mL vial) Fluorouracil Ebewe [SZ] (fluorouracil 1 g/20 mL injection, 1 x 20 mL vial) Fluorouracil Ebewe [SZ] (fluorouracil 2.5 g/50 mL injection, 1 x 50 mL vial) Fluorouracil Ebewe [SZ] (fluorouracil 5 g/100 mL injection, 1 x 100 mL vial) Hospira Pty Limited [HH] (fluorouracil 500 mg/10 mL injection, 5 x 10 mL vials)

FLUOROURACIL

Restricted benefit

For patients requiring administration of fluorouracil by intravenous injection.

Injection

7239B	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	1000 mg	23	..	*129.62	38.30	DBL Fluorouracil Injection BP [HH] (fluorouracil 1 g/20 mL injection, 5 x 20 mL vials) DBL Fluorouracil Injection BP [HH] (fluorouracil 2.5 g/50 mL injection, 1 x 50 mL vial)

Fluorouracil Ebewe [SZ] (fluorouracil 1 g/20 mL injection, 1 x 20 mL vial)
 Fluorouracil Ebewe [SZ] (fluorouracil 2.5 g/50 mL injection, 1 x 50 mL vial)
 Fluorouracil Ebewe [SZ] (fluorouracil 5 g/100 mL injection, 1 x 100 mL vial)
 Hospira Pty Limited [HH] (fluorouracil 500 mg/10 mL injection, 5 x 10 mL vials)

▪ **GEMCITABINE**

Caution Pharmaceutical benefits containing gemcitabine may have different concentrations.

Note Pharmaceutical benefits that have the forms gemcitabine powder for I.V. infusion 1 g (as hydrochloride) (after reconstitution), gemcitabine solution concentrate for I.V. infusion 1 g (as hydrochloride) in 25 mL, gemcitabine solution concentrate for I.V. infusion 1000 mg (as hydrochloride) in 100 mL and gemcitabine solution for injection 1 g (as hydrochloride) in 26.3 mL are equivalent for the purposes of substitution.

Note Pharmaceutical benefits that have the forms gemcitabine powder for I.V. infusion 2 g (as hydrochloride) (after reconstitution), gemcitabine solution concentrate for I.V. infusion 2 g (as hydrochloride) in 50 mL and gemcitabine solution for injection 2 g (as hydrochloride) in 52.6 mL are equivalent for the purposes of substitution.

Note Pharmaceutical benefits that have the forms gemcitabine powder for I.V. infusion 200 mg (as hydrochloride) (after reconstitution), gemcitabine solution concentrate for I.V. infusion 200 mg (as hydrochloride) in 5 mL, gemcitabine solution concentrate for I.V. infusion 200 mg (as hydrochloride) in 20 mL and gemcitabine solution for injection 200 mg (as hydrochloride) in 5.3 mL are equivalent for the purposes of substitution.

Injection

7246J	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	3000 mg	17	..	*160.70	38.30	DBL Gemcitabine for Injection [HH] (gemcitabine 1 g injection, 1 x 1 g vial) DBL Gemcitabine for Injection [HH] (gemcitabine 2 g injection, 1 x 2 g vial) DBL Gemcitabine for Injection [HH] (gemcitabine 200 mg injection, 1 x 200 mg vial) DBL Gemcitabine Injection [HH] (gemcitabine 1 g/26.3 mL injection, 1 x 26.3 mL vial) DBL Gemcitabine Injection [HH] (gemcitabine 2 g/52.6 mL injection, 1 x 52.6 mL vial) DBL Gemcitabine Injection [HH] (gemcitabine 200 mg/5.3 mL injection, 1 x 5.3 mL vial) Gemaccord [EA] (gemcitabine 1 g injection, 1 x 1 g vial) Gemaccord [EA] (gemcitabine 200 mg injection, 1 x 200 mg vial) Gemcitabine Actavis [GN] (gemcitabine 1 g injection, 1 x 1 g vial) Gemcitabine Actavis 2000 [EA] (gemcitabine 2 g injection, 1 x 2 g vial) Gemcitabine Ebewe [SZ] (gemcitabine 1 g injection, 1 x 1 g vial) Gemcitabine Ebewe [SZ] (gemcitabine 1 g/100 mL injection, 1 x 100 mL vial) Gemcitabine Ebewe [SZ] (gemcitabine 200 mg injection, 1 x 200 mg vial) Gemcitabine Ebewe [SZ] (gemcitabine 200 mg/20 mL injection, 1 x 20 mL vial) Gemcitabine Ebewe [SZ] (gemcitabine 500 mg/50 mL injection, 1 x 50 mL vial) Gemcitabine Kabi [PK] (gemcitabine 1 g injection, 1 x 1 g vial) Gemcitabine Sun [RA] (gemcitabine 1 g injection, 1 x 1 g vial) Gemcitabine Sun [RA] (gemcitabine 200 mg injection, 1 x 200 mg vial)

PLANT ALKALOIDS AND OTHER NATURAL PRODUCTS

Vinca alkaloids and analogues

▪ **VINBLASTINE**

Injection

7261E	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	20 mg	17	..	*198.54	38.30	Hospira Pty Limited [HH] (vinblastine sulfate 10 mg/10 mL injection, 5 x 10 mL vials)

■ VINCRISTINE

Injection

7262F	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	2 mg	7	..	*138.34	38.30	Hospira Pty Limited [HH] (vincristine sulfate 1 mg/mL injection, 5 x 1 mL vials)

■ VINOURELBINE

Injection

7263G	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	70 mg	7	..	*173.77	38.30	Hospira Pty Limited [HH] (vinorelbine 10 mg/mL injection, 1 x 1 mL vial) Hospira Pty Limited [HH] (vinorelbine 50 mg/5 mL injection, 1 x 5 mL vial) Navelbine [FB] (vinorelbine 10 mg/mL injection, 1 x 1 mL vial) Navelbine [FB] (vinorelbine 50 mg/5 mL injection, 1 x 5 mL vial) Vinorelbine Ebewe [SZ] (vinorelbine 10 mg/mL injection, 1 x 1 mL vial) Vinorelbine Ebewe [SZ] (vinorelbine 50 mg/5 mL injection, 1 x 5 mL vial) Vinorelbine Kabi [PK] (vinorelbine 50 mg/5 mL injection, 1 x 5 mL vial)

Podophyllotoxin derivatives

■ ETOPOSIDE

Injection

7237X	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	440 mg	14	..	*299.11	38.30	Etopophos [BQ] (etoposide 1 g injection, 1 x 1 g vial) Etopophos [BQ] (etoposide 100 mg injection, 1 x 100 mg vial) Etoposide Ebewe [SZ] (etoposide 100 mg/5 mL injection, 5 x 5 mL vials)

Taxanes

■ CABAZITAXEL

Note Special Pricing Arrangements apply.

Authority required (STREAMLINED)

4662

Castration resistant metastatic carcinoma of the prostate

Clinical criteria:

The treatment must be in combination with prednisone or prednisolone, AND

The treatment must not be used in combination with abiraterone, AND

Patient must have failed treatment with docetaxel due to resistance or intolerance, AND

Patient must have a WHO performance status of 2 or less, AND

Patient must not receive PBS-subsidised cabazitaxel if progressive disease develops while on cabazitaxel.

Injection

7236W	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	55 mg	5	..	*6016.41	38.30	Jevtana [SW] (CABAZITAXEL Jevtana Concentrated injection 60 mg (as acetone solvate) in 1.5 mL, with diluent, 1)

■ DOCETAXEL

Note Pharmaceutical benefits that have the forms docetaxel solution concentrate for I.V. infusion 80 mg in 4 mL, docetaxel solution concentrate for I.V. infusion 80 mg in 8 mL and docetaxel powder for I.V. infusion 80 mg (after reconstitution) are equivalent for the purposes of substitution.

Injection

10158P	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	250 mg	5	..	*170.79	38.30	DBL Docetaxel Concentrated Injection [HH] (docetaxel 160 mg/16 mL injection, 1 x 16 mL vial) DBL Docetaxel Concentrated Injection [HH] (docetaxel 20 mg/2 mL injection, 1 x 2 mL vial) DBL Docetaxel Concentrated Injection [HH] (docetaxel 80 mg/8 mL injection, 1 x 8 mL vial) Docetaxel Sandoz [SZ] (docetaxel 80 mg/8 mL injection, 1 x 8 mL vial) Oncotaxel 140 [EA] (docetaxel 140 mg/7 mL injection, 1 x 7 mL vial)

Oncotaxel 80 [EA] (docetaxel 80 mg/4 mL injection, 1 x 4 mL vial)

▪ **PACLITAXEL**

Injection

7254T	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	450 mg	3	..	*262.46	38.30	Anzatax [HH] (paclitaxel 100 mg/16.7 mL injection, 1 x 16.7 mL vial) Anzatax [HH] (paclitaxel 150 mg/25 mL injection, 1 x 25 mL vial) Anzatax [HH] (paclitaxel 30 mg/5 mL injection, 1 x 5 mL vial) Anzatax [HH] (paclitaxel 300 mg/50 mL injection, 1 x 50 mL vial) Paclitaxel ACT [EF] (paclitaxel 100 mg/16.7 mL injection, 1 x 16.7 mL vial) Paclitaxel ACT [EF] (paclitaxel 150 mg/25 mL injection, 1 x 25 mL vial) Paclitaxel ACT [EF] (paclitaxel 30 mg/5 mL injection, 1 x 5 mL vial) Paclitaxel ACT [EF] (paclitaxel 300 mg/50 mL injection, 1 x 50 mL vial) Paclitaxel Actavis [EA] (paclitaxel 100 mg/16.7 mL injection, 1 x 16.7 mL vial) Paclitaxel Actavis [EA] (paclitaxel 150 mg/25 mL injection, 1 x 25 mL vial) Paclitaxel Actavis [EA] (paclitaxel 30 mg/5 mL injection, 1 x 5 mL vial) Paclitaxel Actavis [EA] (paclitaxel 300 mg/50 mL injection, 1 x 50 mL vial) Paclitaxel Ebewe [SZ] (paclitaxel 150 mg/25 mL injection, 1 x 25 mL vial) Paclitaxel Ebewe [SZ] (paclitaxel 30 mg/5 mL injection, 5 x 5 mL vials) Paclitaxel Ebewe [SZ] (paclitaxel 300 mg/50 mL injection, 1 x 50 mL vial) Paclitaxel Kabi [PK] (paclitaxel 30 mg/5 mL injection, 1 x 5 mL vial) Paclitaxel Kabi [PK] (paclitaxel 300 mg/50 mL injection, 1 x 50 mL vial) Plaxel [ED] (paclitaxel 100 mg/16.7 mL injection, 1 x 16.7 mL vial) Plaxel [ED] (paclitaxel 150 mg/25 mL injection, 1 x 25 mL vial) Plaxel [ED] (paclitaxel 30 mg/5 mL injection, 1 x 5 mL vial) Plaxel [ED] (paclitaxel 300 mg/50 mL injection, 1 x 50 mL vial)

▪ **PACLITAXEL NANOPARTICLE ALBUMIN BOUND**

Note Not for use as neoadjuvant or adjuvant therapy.

Authority required (STREAMLINED)

4657

Stage IV (metastatic) adenocarcinoma of the pancreas

Clinical criteria:

The treatment must be in combination with gemcitabine, AND

The condition must not have been treated previously with PBS-subsidised therapy, AND

Patient must have an Eastern Cooperative Oncology Group (ECOG) performance status score of 2 or less.

A patient who has progressive disease when treated with this drug is no longer eligible for PBS-subsidised treatment with this drug.

Injection

Authority required

CD30 positive systemic anaplastic large cell lymphoma

Treatment Phase: Initial treatment

Clinical criteria:

The treatment must be for curative intent, AND

Patient must have undergone appropriate prior front-line curative intent chemotherapy, AND

Patient must demonstrate relapsed or chemotherapy-refractory disease.

Applications for authorisation of initial treatment must be in writing and must include:

(a) a completed authority prescription form; and

(b) a completed Systemic anaplastic large cell lymphoma Brentuximab PBS Authority Application - Supporting Information Form which includes the following:

(i) a histology report including evidence of the tumour's CD30 positivity from a biopsy subsequent to the most recently delivered prior treatment with radiation, chemotherapy, biologics, immunotherapy or other agents;

(ii) The date of initial diagnosis of systemic anaplastic large cell lymphoma;

(iii) Dates of commencement and completion of front-line curative intent chemotherapy;

(iv) a declaration of whether the patient's disease is relapsed or refractory, and the date and means by which the patient's disease was assessed as being relapsed or refractory;

(v) a declaration of whether the patient has had, or is planned to have, a transplant

A maximum quantity and number of repeats to provide for an initial course of brentuximab vedotin of 4 cycles will be authorised as part of the initiating restriction.

▪ **IPILIMUMAB**

Note No increase in the maximum number of repeats may be authorised.

Note Special Pricing Arrangements apply.

Authority required (STREAMLINED)

4254

Unresectable Stage III or Stage IV malignant melanoma

Treatment Phase: Induction treatment

Clinical criteria:

The treatment must be as monotherapy, AND

Patient must not have received prior treatment with ipilimumab, AND

The treatment must not exceed a total of 4 doses at a maximum dose of 3 mg per kg every 3 weeks.

The patient's body weight must be documented in the patient's medical records at the time treatment is initiated.

Note For patients who commence therapy with ipilimumab:

(i) Decisions concerning efficacy should await completion of the entire induction regimen (four doses) and should be made in conjunction with established criteria for immunological responses. However induction may be ceased or delayed if symptomatic progressive disease or intolerable adverse events occur and if, in the opinion of the clinician, continuation of treatment poses a risk to the patient;

(ii) Tumour responses may occur beyond the initial 12 week induction phase and evaluation for potential later responses should be undertaken regularly for the first year.

Authority required (STREAMLINED)

4261

Unresectable Stage III or Stage IV malignant melanoma

Treatment Phase: Re-induction treatment

Clinical criteria:

The treatment must be as monotherapy, AND

Patient must have progressive disease after achieving an initial objective response to the most recent course of ipilimumab treatment (induction or re-induction), AND

The treatment must not exceed a total of 4 doses at a maximum dose of 3 mg per kg every 3 weeks.

An initial objective response to treatment is defined as either:

(i) sustained stable disease of greater than or equal to 3 months duration measured from at least 2 weeks after the date of completion of the most recent course of ipilimumab; or

(ii) a partial or complete response.

The patient's body weight must be documented in the patient's medical records at the time treatment with ipilimumab is initiated.

Injection

2638W	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer

Authority required (STREAMLINED)

4251

Unresectable Stage III or Stage IV malignant melanoma

Treatment Phase: Completion of induction treatment

Clinical criteria:

The treatment must be as monotherapy, AND

The treatment must be for completion of induction treatment in a patient who commenced induction treatment with ipilimumab prior to 1 August 2013, AND

The treatment must not exceed a total of 4 doses (combined PBS-subsidised and non-PBS-subsidised) at a maximum dose of 3 mg per kg every 3 weeks.

The patient's body weight must be documented in the patient's medical records at the time treatment is initiated.

For patients who commenced induction treatment with ipilimumab prior to 1 August 2013 prescribers should request the appropriate number of repeats to provide a total of 4 doses of ipilimumab (combined PBS-subsidised and non-PBS subsidised).

Note For patients who commence therapy with ipilimumab:

(i) Decisions concerning efficacy should await completion of the entire induction regimen (four doses) and should be made in conjunction with established criteria for immunological responses. However induction may be ceased or delayed if symptomatic progressive disease or intolerable adverse events occur and if, in the opinion of the clinician, continuation of treatment poses a risk to the patient;

(ii) Tumour responses may occur beyond the initial 12 week induction phase and evaluation for potential later responses should be undertaken regularly for the first year.

Authority required (STREAMLINED)

4252

Unresectable Stage III or Stage IV malignant melanoma

Treatment Phase: Completion of re-induction treatment

Clinical criteria:

The treatment must be as monotherapy, AND

Patient must have progressive disease after achieving an initial objective response to the most recent course of ipilimumab treatment (induction or re-induction) received prior to 1 August 2013, AND

The treatment must be for completion of re-induction treatment in a patient who commenced re-induction treatment with ipilimumab prior to 1 August 2013, AND

The treatment must not exceed a total of 4 doses (combined PBS-subsidised and non-PBS-subsidised) at a maximum dose of 3 mg per kg every 3 weeks.

An initial objective response to treatment is defined as either:

(i) sustained stable disease of greater than or equal to 3 months duration measured from at least 2 weeks after the date of completion of the most recent course of ipilimumab; or

(ii) a partial or complete response.

The patient's body weight must be documented in the patient's medical records at the time treatment with ipilimumab is initiated.

For patients who commenced re-induction treatment with ipilimumab prior to 1 August 2013 prescribers should request the appropriate number of repeats to provide a maximum of 4 doses of ipilimumab (combined PBS-subsidised and non-PBS-subsidised).

HOBART TAS 7001

Note Obinutuzumab is not to be used as monotherapy or in combination with anti-cancer drugs other than chlorambucil.

Note A patient may only qualify for PBS-subsidised treatment under this restriction once in a lifetime.

Note No increase in the maximum quantity or number of units may be authorised.

Note No increase in the maximum number of repeats may be authorised.

Note Special Pricing Arrangements apply.

Authority required

Chronic lymphocytic leukaemia (CLL)

Clinical criteria:

Patient must require treatment for CD20 positive chronic lymphocytic leukaemia (CLL), AND

The condition must be previously untreated, AND

Patient must be inappropriate for fludarabine based chemo-immunotherapy, AND

The treatment must be in combination with chlorambucil, AND

Patient must have a creatinine clearance 30 mL/min or greater, AND

Patient must have a total cumulative illness rating scale (CIRS) score of greater than 6 (excluding CLL-induced illness or organ damage); OR

Patient must have a creatinine clearance less than 70 mL/min.

Treatment must be discontinued in patients who experience disease progression while on treatment.

Applications for authorisation must be in writing and must include:

(a) a completed authority prescription form; AND

(b) a completed CD20 positive Chronic Lymphocytic Leukaemia PBS Authority Application - Supporting Information Form which includes:

i) documentation that the patient has CD20 positive CLL (flow cytometry pathology report from blood or bone marrow, noting that this may be from some time earlier); AND

ii) a statement that the patient is previously untreated, is inappropriate for fludarabine based chemo immunotherapy, that treatment will be in combination with chlorambucil; AND

iii) documentation that the patient has a creatinine clearance 30 mL/min or greater; AND

iv) One of the following, either:

- A completed cumulative illness rating scale (CIRS) score form demonstrating that the patient has a score of greater than 6 (excluding CLL-induced illness or organ damage)

OR

-Documentation that the patient has a creatinine clearance less than 70 mL/min;

■ PEMBROLIZUMAB

Note No increase in the maximum number of repeats may be authorised.

Note MANAGED ENTRY SCHEME

This medicine has been listed on the PBS via a Managed Entry Scheme (MES). This MES provides a mechanism to address the uncertainty over the size of the additional clinical benefit of this medicine while providing early access to those patients for whom there is a high clinical need.

Information about the benefits of this medicine in clinical practice will be collected, analysed and presented to the Pharmaceutical Benefits Advisory Committee (PBAC) for consideration in the near future.

Prescribers and patients must be aware that if a drug listed via a MES does not prove as beneficial in clinical practice as appeared in the clinical data presented to the PBAC, it may subsequently have its restriction modified, or may be removed from the PBS by the Commonwealth or at the request of the sponsor.

In the case of pembrolizumab, the relevant information is being collected from an ongoing clinical trial outside the PBS.

Details of these arrangements are included in an information sheet that must be provided by the prescribing doctor to each patient receiving PBS subsidy for this medicine.

For more information on Managed Entry Schemes, please visit

<http://www.pbs.gov.au/info/publication/factsheets/shared/framework-for-introduction-of-managed-entry-scheme-for-PBAC-submissions>.

For more information on the PBAC's consideration of this medicine and its MES, please visit

<http://www.pbs.gov.au/info/industry/listing/elements/pbac-meetings/psd/2015-03/pembrolizumab-psd-03-2015>.

Authority required

Metastatic (Stage IV) HER2 positive breast cancer

Treatment Phase: Continuing treatment

Clinical criteria:

Patient must have previously been issued with an authority prescription for this drug for this condition, AND
 Patient must not receive PBS-subsidised treatment with this drug if progressive disease develops while on this drug, AND
 The treatment must be in combination with trastuzumab, AND
 The treatment must not be used in a patient with a left ventricular ejection fraction (LVEF) of less than 45% and/or with symptomatic heart failure.

Cardiac function must be tested by echocardiography (ECHO) or multigated acquisition (MUGA), at 3 monthly intervals during treatment.

A patient who has progressive disease when treated with this drug is no longer eligible for PBS-subsidised treatment with this drug.

The treatment must not exceed a lifetime total of one continuous course. However, short treatment breaks are permitted. A patient who has a treatment break of less than 6 weeks in PBS-subsidised treatment with this drug for reasons other than disease progression is eligible to continue to receive PBS-subsidised treatment with this drug. A patient who has a treatment break of more than 6 weeks in PBS-subsidised treatment with this drug is not eligible to receive PBS-subsidised treatment with this drug.

Where a patient has had a treatment break the length of the break is measured from the date the most recent treatment was stopped to the date of the application for further treatment.

HOBART TAS 7001

Authority required

Locally advanced HER2 positive breast cancer

Treatment Phase: Initial treatment (weekly regimen)

Clinical criteria:

Patient must commence treatment concurrently with neoadjuvant chemotherapy, AND

The treatment must not be used in a patient with a left ventricular ejection fraction (LVEF) of less than 45% and/or with symptomatic heart failure, AND

Patient must not receive more than 52 weeks of combined PBS-subsidised and non-PBS-subsidised therapy.

HER2 positivity must be demonstrated by in situ hybridisation (ISH).

Authority applications for initial treatment must be made in writing and must include:

(a) a completed authority prescription form; and

(b) a completed Early Breast Cancer - PBS Supporting Information Form which includes:

(i) a copy of the pathology report from an Approved Pathology Authority confirming the presence of HER2 gene amplification by in situ hybridisation (ISH); and

(ii) a copy of the signed patient acknowledgement form.

Cardiac function must be tested by a suitable method including, for example, ECHO or MUGA, prior to seeking the initial authority approval and then at 3 monthly intervals during treatment.

For a patient on the weekly regimen the medical practitioner should request sufficient quantity based on the weight of the patient to provide for a single loading dose of 4 mg per kg.

Authority required

Early HER2 positive breast cancer

Treatment Phase: Initial treatment (weekly regimen)

Clinical criteria:

Patient must commence treatment concurrently with adjuvant chemotherapy, AND

Patient must have undergone surgery, AND

The treatment must not be used in a patient with a left ventricular ejection fraction (LVEF) of less than 45% and/or with symptomatic heart failure, AND

Patient must not receive more than 52 weeks of combined PBS-subsidised and non-PBS-subsidised therapy.

HER2 positivity must be demonstrated by in situ hybridisation (ISH).

Authority applications for initial treatment must be made in writing and must include:

(a) a completed authority prescription form; and

(b) a completed Early Breast Cancer - PBS Supporting Information Form which includes:

(i) a copy of the pathology report from an Approved Pathology Authority confirming the presence of HER2 gene amplification by in situ hybridisation (ISH); and

(ii) a copy of the signed patient acknowledgement form.

Cardiac function must be tested by a suitable method including, for example, ECHO or MUGA, prior to seeking the initial authority approval and then at 3 monthly intervals during treatment.

For a patient on the weekly regimen the medical practitioner should request sufficient quantity based on the weight of the patient to provide for a single loading dose of 4 mg per kg.

HOBART TAS 7001

Authority required

Locally advanced HER2 positive breast cancer

Treatment Phase: Initial treatment (3 weekly regimen)

Clinical criteria:

Patient must commence treatment concurrently with neoadjuvant chemotherapy, AND

The treatment must not be used in a patient with a left ventricular ejection fraction (LVEF) of less than 45% and/or with symptomatic heart failure, AND

Patient must not receive more than 52 weeks of combined PBS-subsidised and non-PBS-subsidised therapy.

HER2 positivity must be demonstrated by in situ hybridisation (ISH).

Authority applications for initial treatment must be made in writing and must include:

(a) a completed authority prescription form; and

(b) a completed Early Breast Cancer - PBS Supporting Information Form which includes:

(i) a copy of the pathology report from an Approved Pathology Authority confirming the presence of HER2 gene amplification by in situ hybridisation (ISH); and

(ii) a copy of the signed patient acknowledgement form.

Cardiac function must be tested by a suitable method including, for example, ECHO or MUGA, prior to seeking the initial authority approval and then at 3 monthly intervals during treatment.

For a patient on the 3 weekly regimen the medical practitioner should request sufficient quantity based on the weight of the patient to provide for a single loading dose of 8 mg per kg.

Authority required

Early HER2 positive breast cancer

Treatment Phase: Initial treatment (3 weekly regimen)

Clinical criteria:

Patient must commence treatment concurrently with adjuvant chemotherapy, AND

Patient must have undergone surgery, AND

The treatment must not be used in a patient with a left ventricular ejection fraction (LVEF) of less than 45% and/or with symptomatic heart failure, AND

Patient must not receive more than 52 weeks of combined PBS-subsidised and non-PBS-subsidised therapy.

HER2 positivity must be demonstrated by in situ hybridisation (ISH).

Authority applications for initial treatment must be made in writing and must include:

(a) a completed authority prescription form; and

(b) a completed Early Breast Cancer - PBS Supporting Information Form which includes:

(i) a copy of the pathology report from an Approved Pathology Authority confirming the presence of HER2 gene amplification by in situ hybridisation (ISH); and

(ii) a copy of the signed patient acknowledgement form.

Cardiac function must be tested by a suitable method including, for example, ECHO or MUGA, prior to seeking the initial authority approval and then at 3 monthly intervals during treatment.

For a patient on the 3 weekly regimen the medical practitioner should request sufficient quantity based on the weight of the patient to provide for a single loading dose of 8 mg per kg.

Injection

7266K	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer

Authority required

Metastatic (Stage IV) HER2 positive adenocarcinoma of the stomach or gastro-oesophageal junction

Treatment Phase: Initial PBS-subsidised treatment (Grandfather patient)

Clinical criteria:

Patient must have evidence of human epidermal growth factor receptor 2 (HER2) positivity, AND

Patient must have been treated with this drug for this condition prior to 1 January 2016, AND

The treatment must not be used in a patient with a left ventricular ejection fraction (LVEF) of less than 45% and/or with symptomatic heart failure.

Cardiac function must be tested by echocardiography (ECHO) or multigated acquisition (MUGA), at 3 monthly intervals during treatment.

Authority applications for initial treatment must be made in writing and must include:

(a) a completed authority prescription form; and

(b) a completed Metastatic (Stage IV) HER2 positive adenocarcinoma of stomach or gastro-oesophageal junction authority application form which includes confirmation that the patient has Stage IV disease and a copy of the pathology report from an Approved Pathology Authority confirming evidence of human epidermal growth factor receptor 2 (HER2) positivity.

Authority required

Metastatic (Stage IV) HER2 positive adenocarcinoma of the stomach or gastro-oesophageal junction

Treatment Phase: Initial treatment

Clinical criteria:

Patient must have evidence of human epidermal growth factor receptor 2 (HER2) positivity as demonstrated by immunohistochemistry 2+ or more in tumour material, AND

Patient must have evidence of HER2 gene amplification as demonstrated by in situ hybridisation results based on more than 6 copies of HER2 in the same tumour tissue sample, AND

Patient must have evidence of HER2 gene amplification as demonstrated by in situ hybridisation results based on the ratio of HER2 to chromosome 17 being more than 2 in the same tumour tissue sample, AND

Patient must commence treatment in combination with cisplatin and capecitabine; OR

Patient must commence treatment in combination with cisplatin and 5 fluorouracil, AND

Patient must not have previously received this drug for this condition, AND

Patient must not have received prior chemotherapy for this condition, AND

Patient must have a WHO performance status of 2 or less, AND

The treatment must not be used in a patient with a left ventricular ejection fraction (LVEF) of less than 45% and/or with symptomatic heart failure.

Authority applications for initial treatment must be made in writing and must include:

(a) a completed authority prescription form; and

(b) a completed Metastatic (Stage IV) HER2 positive adenocarcinoma of stomach or gastro-oesophageal junction authority application form which includes confirmation that the patient has Stage IV disease and a copy of the pathology report from an Approved Pathology Authority confirming evidence of human epidermal growth factor receptor 2 (HER2) gene amplification as demonstrated in tumour material by both (i) immunohistochemistry (IHC) 2+ or IHC 3+ AND (ii) in situ hybridisation (ISH) results based on both more than 6 copies of HER2 AND the ratio of HER2: chromosome 17 being more than 2 in the same tumour tissue sample

Cardiac function must be tested by echocardiography (ECHO) or multigated acquisition (MUGA), prior to seeking the initial authority approval and then at 3 monthly intervals during treatment

Authority required

Metastatic (Stage IV) HER2 positive breast cancer

Treatment Phase: Initial treatment

Clinical criteria:

Patient must have evidence of human epidermal growth factor receptor 2 (HER2) gene amplification as demonstrated by in situ hybridisation (ISH) either in the primary tumour or a metastatic lesion, AND

The condition must have progressed following treatment with pertuzumab and trastuzumab in combination; OR

The condition must have progressed during or within 6 months of completing adjuvant therapy with trastuzumab, AND

Patient must have a WHO performance status of 0 or 1, AND

The treatment must be as monotherapy, AND

Patient must not have received prior treatment with lapatinib; OR

Patient must have developed intolerance to lapatinib of a severity necessitating permanent treatment withdrawal, AND

The treatment must not be used in a patient with a left ventricular ejection fraction (LVEF) of less than 45% and/or with symptomatic heart failure.

Authority applications for initial treatment must be made in writing and must include:

(a) a completed authority prescription form; and

(b) a completed Late stage metastatic breast cancer Initial PBS authority application form which includes:

(i) a copy of the pathology report from an Approved Pathology Authority confirming evidence of HER2 gene amplification in the primary tumour or a metastatic lesion by in situ hybridisation (ISH) and tick a box to state the person has Stage IV disease;

(ii) a copy of the signed patient acknowledgement form;

- (iii) dates of treatment with trastuzumab and pertuzumab; and
- (iv) date of demonstration of progression whilst on treatment with trastuzumab and pertuzumab; or
- (v) date of demonstration of progression and date of completion of adjuvant trastuzumab treatment.

Cardiac function must be tested by echocardiography (ECHO) or multigated acquisition (MUGA), prior to seeking the initial authority approval and then at 3 monthly intervals during treatment.

Patients who have progressive disease on lapatinib are not eligible to receive PBS-subsidised trastuzumab emtansine.

Patients who have developed intolerance to lapatinib of a severity necessitating permanent treatment withdrawal are eligible to receive PBS-subsidised trastuzumab emtansine.

If intolerance to treatment develops during the relevant period of use, which is of a severity necessitating permanent treatment withdrawal, please provide details of the degree of this toxicity at the time of application.

Note Any queries concerning the arrangements to prescribe may be directed to the Department of Human Services on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).

Authority required

Multiple myeloma

Treatment Phase: Treatment of Progressive disease - Continuing PBS-subsidised treatment

Clinical criteria:

The treatment must be as monotherapy; OR

The treatment must be in combination with a corticosteroid and/or cyclophosphamide, AND

Patient must have previously received 8 treatment cycles of bortezomib for progressive disease, AND

Patient must have demonstrated at the completion of cycle 8 at least a partial response to bortezomib, AND

Patient must not have received 2 treatment cycles after first achieving a confirmed complete response, AND

Patient must not have a gap of more than 10 months between the initial application and an application following completion of 8 treatment cycles, AND

Patient must not receive more than 3 cycles of bortezomib under this restriction.

The authority application must be made in writing and must include:

(1) a completed authority prescription form; and

(2) a completed Multiple Myeloma bortezomib Authority Application Supporting Information form; and

(3) diagnostic reports demonstrating the patient has achieved at least a partial response.

If serum M protein is measurable, partial response (PR) compared with baseline (prior to treatment with bortezomib) is defined as at least a 50% reduction in the level of serum M protein (monoclonal protein).

If urine Bence-Jones protein levels are being used to monitor disease activity, partial response (PR) compared with baseline (prior to treatment with bortezomib) is defined as at least a 90% reduction in 24-hour urinary light chain M protein excretion or to less than 200 mg per 24 hours.

If serum M protein is unmeasurable as in non-secretory/oligo-secretory multiple myeloma, partial response compared with baseline is defined as at least a 50% reduction in the difference between involved and uninvolved serum free light chain (FLC) levels.

If serum M protein and urine Bence-Jones protein and serum FLC are unmeasurable/unavailable, partial response compared with baseline is defined as:

(a) at least a 50% reduction in bone marrow plasma cells; or

(b) no increase in size or number of lytic bone lesions (development of compression fracture does not exclude response); or

(c) at least a 50% reduction in the size of soft tissue plasmacytoma (by clinical or applicable radiographic examination, i.e. MRI or CT-Scan); or

(d) normalisation of corrected serum calcium to less than or equal to 2.65 mmol per L.

Diagnostic reports must be no more than one month old at the time of application.

Where a response assessment is not submitted prior to cycle 9, patients will be deemed to have failed to respond to treatment with bortezomib.

Confirmation of complete response requires 2 determinations a minimum of 6 weeks apart.

Injection

7269N	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	3000 mcg	11	..	*1858.26	38.30	Velcade [JC] (bortezomib 3.5 mg injection, 1 x 3.5 mg vial)

Authority required

Multiple myeloma

Treatment Phase: Retreatment of Progressive disease - Continuing PBS-subsidised treatment

Clinical criteria:

The treatment must be as monotherapy; OR

The treatment must be in combination with a corticosteroid and/or cyclophosphamide, AND

Patient must have previously received 8 treatment cycles of bortezomib in the current treatment course, AND

Patient must have demonstrated at the completion of cycle 8 at least a partial response to bortezomib, AND

Patient must not have received 2 treatment cycles after first achieving a confirmed complete response, AND

Patient must not have a gap of more than 10 months between the initial application and an application following completion of 8 treatment cycles, AND

Patient must not receive more than 3 cycles of bortezomib under this restriction.

The authority application must be made in writing and must include:

(1) a completed authority prescription form; and

(2) a completed Multiple Myeloma bortezomib Authority Application Supporting Information form; and

(3) diagnostic reports demonstrating the patient has achieved at least a partial response.

If serum M protein is measurable, partial response (PR) compared with baseline (prior to treatment with bortezomib) is defined as at least a 50% reduction in the level of serum M protein (monoclonal protein).

If urine Bence-Jones protein levels are being used to monitor disease activity, partial response (PR) compared with baseline (prior to treatment with bortezomib) is defined as at least a 90% reduction in 24-hour urinary light chain M protein excretion or to less than 200 mg per 24 hours.

If serum M protein is unmeasurable as in non-secretory/oligo-secretory multiple myeloma, partial response compared with baseline is defined as at least a 50% reduction in the difference between involved and uninvolved serum free light chain (FLC) levels.

If serum M protein and urine Bence-Jones protein and serum FLC are unmeasurable/unavailable, partial response compared with baseline is defined as:

(a) at least a 50% reduction in bone marrow plasma cells; or

(b) no increase in size or number of lytic bone lesions (development of compression fracture does not exclude response); or

(c) at least a 50% reduction in the size of soft tissue plasmacytoma (by clinical or applicable radiographic examination, i.e. MRI or CT-Scan); or

(d) normalisation of corrected serum calcium to less than or equal to 2.65 mmol per L.

Diagnostic reports must be no more than one month old at the time of application.

Where a response assessment is not submitted prior to cycle 9, patients will be deemed to have failed to respond to treatment with bortezomib.

Confirmation of complete response requires 2 determinations a minimum of 6 weeks apart.

Symptomatic multiple myeloma

Treatment Phase: Initial PBS-subsidised treatment

Clinical criteria:

Patient must be newly diagnosed, AND

Patient must be ineligible for high dose chemotherapy, AND

Patient must not be receiving PBS-subsidised thalidomide or lenalidomide, AND

The treatment must be in combination with a corticosteroid and melphalan or cyclophosphamide, AND

Patient must not receive more than 4 cycles of treatment with bortezomib under this restriction.

The authority application must be made in writing and must include:

(1) a completed authority prescription form; and

(2) a completed Multiple Myeloma bortezomib Authority Application Supporting Information Form, which includes details of the histological diagnosis of multiple myeloma and ineligibility for high dose chemotherapy; and

(3) a signed patient acknowledgement.

Authority required

Symptomatic multiple myeloma

Treatment Phase: Initial PBS-subsidised treatment

Clinical criteria:

Patient must be newly diagnosed, AND

Patient must have severe acute renal failure, AND

Patient must require dialysis; OR

Patient must be at high risk of requiring dialysis in the opinion of a nephrologist, AND

The treatment must be in combination with a corticosteroid and/or cyclophosphamide, AND

Patient must not be receiving PBS-subsidised thalidomide or lenalidomide, AND

Patient must not receive more than 4 cycles of treatment with bortezomib under this restriction.

The authority application must be made in writing and must include:

(1) a completed authority prescription form; and

(2) a completed Multiple Myeloma bortezomib Authority Application Supporting Information Form, which includes details of the histological diagnosis of multiple myeloma, the name of the nephrologist who has reviewed the patient and the date of review, a copy of the current pathology reports reporting Glomerular Filtration Rate from an Approved Pathology Authority, and nomination of the disease activity parameter(s) that will be used to assess response; and

(3) a signed patient acknowledgement.

Disease activity parameters include current diagnostic reports of at least one of the following:

(a) the level of serum monoclonal protein; or

(b) Bence-Jones proteinuria - the results of 24-hour urinary light chain M protein excretion; or

(c) in oligo-secretory and non-secretory myeloma patients only, the serum level of free kappa and lambda light chains; or

(d) bone marrow aspirate or trephine; or

(e) if present, the size and location of lytic bone lesions (not including compression fractures); or

(f) if present, the size and location of all soft tissue plasmacytomas by clinical or radiographic examination i.e. Magnetic Resonance Imaging (MRI) or computed tomography (CT) scan; or

(g) if present, the level of hypercalcaemia, corrected for albumin concentration.

As these parameters will be used to determine response, results for either (a) or (b) or (c) should be provided for all patients.

Where the patient has oligo-secretory or non-secretory multiple myeloma, either (c) or (d) or if relevant (e), (f) or (g) should be provided.

Where the prescriber plans to assess response in patients with oligo-secretory or non-secretory multiple myeloma with free light chain assays, evidence of the oligo-secretory or non-secretory nature of the multiple myeloma (current serum M protein less than 10 g per L) must be provided.

Note Patients who have initiated treatment with thalidomide within the last month do not have to experience failure after a trial of at least 4 weeks of thalidomide or to have failed to achieve at least a minimal response after at least 8 weeks of thalidomide treatment.

Injection

Authority required

Multiple myeloma

Treatment Phase: Treatment of Progressive disease - Initial PBS-subsidised treatment

Clinical criteria:

The condition must be confirmed by a histological diagnosis, AND

The treatment must be as monotherapy; OR

The treatment must be in combination with a corticosteroid and/or cyclophosphamide, AND

Patient must have progressive disease after at least one prior therapy, AND

Patient must have undergone or be ineligible for a primary stem cell transplant, AND

Patient must have experienced treatment failure after a trial of at least four (4) weeks of thalidomide at a dose of at least 100 mg daily or have failed to achieve at least a minimal response after eight (8) or more weeks of thalidomide-based therapy for progressive disease, AND

Patient must not be receiving concomitant PBS-subsidised lenalidomide, AND

Patient must not receive more than 4 cycles of treatment with bortezomib under this restriction.

Progressive disease is defined as at least 1 of the following:

- (a) at least a 25% increase and an absolute increase of at least 5 g per L in serum M protein (monoclonal protein); or
- (b) at least a 25% increase in 24-hour urinary light chain M protein excretion, and an absolute increase of at least 200 mg per 24 hours; or
- (c) in oligo-secretory and non-secretory myeloma patients only, at least a 50% increase of the difference between involved free light chain and uninvolved free light chain; or
- (d) at least a 25% relative increase and at least a 10% absolute increase in plasma cells in a bone marrow aspirate or on biopsy; or
- (e) an increase in the size or number of lytic bone lesions (not including compression fractures); or
- (f) at least a 25% increase in the size of an existing or the development of a new soft tissue plasmacytoma (determined by clinical examination or diagnostic imaging); or
- (g) development of hypercalcaemia (corrected serum calcium greater than 2.65 mmol per L not attributable to any other cause).

Oligo-secretory and non-secretory patients are defined as having active disease with less than 10 g per L serum M protein.

Thalidomide treatment failure is defined as:

- (1) confirmed disease progression during thalidomide treatment or within 6 months of discontinuing thalidomide treatment; or
- (2) severe intolerance or toxicity unresponsive to clinically appropriate dose adjustment.

Severe intolerance due to thalidomide is defined as unacceptable somnolence or sedation interfering with activities of daily living.

Toxicity from thalidomide is defined as peripheral neuropathy (Grade 2 or greater, interfering with function), drug-related seizures, serious Grade 3 or 4 drug-related dermatological reactions, such as Stevens-Johnson Syndrome, or other Grade 3 or 4 toxicity.

Failure to achieve at least a minimal response after 8 or more weeks of thalidomide-based therapy for progressive disease is defined as:

- (1) less than a 25% reduction in serum or urine M protein; or
- (2) in oligo-secretory and non-secretory myeloma patients only, less than a 25% reduction in the difference between involved and uninvolved serum free light chain levels.

If the dosing requirement for thalidomide cannot be met, the application must state the reasons why this criterion cannot be satisfied.

The authority application must be made in writing and must include:

- (1) a completed authority prescription form; and
- (2) a completed Multiple Myeloma bortezomib Authority Application - Supporting Information Form, which includes details of the histological diagnosis of multiple myeloma, prior treatments including name(s) of drug(s) and date of most recent treatment cycle and record of prior stem cell transplant or ineligibility for prior stem cell transplant; details of thalidomide treatment failure; details of the basis of the diagnosis of progressive disease or failure to respond; and nomination of which disease activity parameters will be used to assess response; and
- (3) duration of thalidomide and daily dose prescribed; and
- (4) a signed patient acknowledgment.

To enable confirmation of eligibility for treatment, current diagnostic reports of at least one of the following must be provided:

- (a) the level of serum monoclonal protein; or
- (b) Bence-Jones proteinuria - the results of 24-hour urinary light chain M protein excretion; or
- (c) the serum level of free kappa and lambda light chains; or
- (d) bone marrow aspirate or trephine; or
- (e) if present, the size and location of lytic bone lesions (not including compression fractures); or
- (f) if present, the size and location of all soft tissue plasmacytomas by clinical or radiographic examination i.e. MRI or CT-scan; or
- (g) if present, the level of hypercalcaemia, corrected for albumin concentration.

As these parameters will be used to determine response, results for either (a) or (b) or (c) should be provided for all patients. Where the patient has oligo-secretory or non-secretory multiple myeloma, either (c) or (d) or if relevant (e), (f) or (g) should be provided. Where the prescriber plans to assess response in patients with oligo-secretory or non-secretory multiple myeloma with free light chain assays, evidence of the oligo-secretory or non-secretory nature of the multiple myeloma (current serum M protein less than 10 g per L) must be provided.

Authority required

Multiple myeloma

Treatment Phase: Treatment of Progressive disease - Continuing PBS-subsidised treatment

Clinical criteria:

The treatment must be as monotherapy; OR

The treatment must be in combination with a corticosteroid and/or cyclophosphamide, AND

Patient must have previously received 4 treatment cycles of bortezomib for progressive disease, AND

Patient must have demonstrated at the completion of cycle 4 at least a partial response to bortezomib, AND

Patient must not have received 2 treatment cycles after first achieving a confirmed complete response, AND

Patient must not have a gap of more than 6 months between the initial application and subsequent applications, AND

Patient must not receive more than 4 cycles of treatment with bortezomib under this restriction.

The authority application must be made in writing and must include:

(1) a completed authority prescription form; and

(2) a completed Multiple Myeloma bortezomib Authority Application Supporting Information form; and

(3) diagnostic reports demonstrating the patient has achieved at least a partial response.

If serum M protein is measurable, partial response (PR) compared with baseline (prior to treatment with bortezomib) is defined as at least a 50% reduction in the level of serum M protein (monoclonal protein).

If urine Bence-Jones protein levels are being used to monitor disease activity, partial response (PR) compared with baseline (prior to treatment with bortezomib) is defined as at least a 90% reduction in 24-hour urinary light chain M protein excretion or to less than 200 mg per 24 hours.

If serum M protein is unmeasurable as in non-secretory/oligo-secretory multiple myeloma, partial response compared with baseline is defined as at least a 50% reduction in the difference between involved and uninvolved serum free light chain (FLC) levels.

If serum M protein and urine Bence-Jones protein and serum FLC are unmeasurable/unavailable, partial response compared with baseline is defined as:

(a) at least a 50% reduction in bone marrow plasma cells; or

(b) no increase in size or number of lytic bone lesions (development of compression fracture does not exclude response); or

(c) at least a 50% reduction in the size of soft tissue plasmacytoma (by clinical or applicable radiographic examination, i.e. MRI or CT-Scan); or

(d) normalisation of corrected serum calcium to less than or equal to 2.65 mmol per L.

Diagnostic reports must be no more than one month old at the time of application.

Where a response assessment is not submitted prior to cycle 5, patients will be deemed to have failed to respond to treatment with bortezomib.

Confirmation of complete response requires 2 determinations a minimum of 6 weeks apart.

Note Patients who fail to demonstrate at least a partial response after 8 cycles will not be eligible to receive further PBS-subsidised treatment with bortezomib.

Multiple myeloma

Treatment Phase: Retreatment of Progressive disease - Initial PBS-subsidised treatment

Clinical criteria:

The treatment must be as monotherapy; OR

The treatment must be in combination with a corticosteroid and/or cyclophosphamide, AND

Patient must have progressive disease, AND

Patient must have previously been treated with PBS-subsidised bortezomib, AND

Patient must have experienced at least a partial response to the most recent course of PBS-subsidised bortezomib therapy, AND

Patient must not be receiving concomitant PBS-subsidised lenalidomide, AND

Patient must not receive more than 4 cycles of treatment with bortezomib under this restriction.

Progressive disease is defined as at least 1 of the following:

(a) at least a 25% increase and an absolute increase of at least 5 g per L in serum M protein (monoclonal protein); or

(b) at least a 25% increase in 24-hour urinary light chain M protein excretion, and an absolute increase of at least 200 mg per 24 hours; or

(c) in oligo-secretory and non-secretory myeloma patients only, at least a 50% increase of the difference between involved free light chain and uninvolved free light chain; or

- (d) at least a 25% relative increase and at least a 10% absolute increase in plasma cells in a bone marrow aspirate or on biopsy; or
- (e) an increase in the size or number of lytic bone lesions (not including compression fractures); or
- (f) at least a 25% increase in the size of an existing or the development of a new soft tissue plasmacytoma (determined by clinical examination or diagnostic imaging); or
- (g) development of hypercalcaemia (corrected serum calcium greater than 2.65 mmol per L not attributable to any other cause).

Oligo-secretory and non-secretory patients are defined as having active disease with less than 10 g per L serum M protein. If serum M protein is measurable, partial response (PR) compared with baseline (prior to treatment with bortezomib) is defined as at least a 50% reduction in the level of serum M protein (monoclonal protein).

If urine Bence-Jones protein levels are being used to monitor disease activity, partial response (PR) compared with baseline (prior to treatment with bortezomib) is defined as at least a 90% reduction in 24-hour urinary light chain M protein excretion or to less than 200 mg per 24 hours.

If serum M protein is unmeasurable as in non-secretory/oligo-secretory multiple myeloma, partial response compared with baseline is defined as at least a 50% reduction in the difference between involved and uninvolved serum free light chain (FLC) levels.

If serum M protein and urine Bence-Jones protein and serum FLC are unmeasurable/unavailable, partial response compared with baseline is defined as:

- (a) at least a 50% reduction in bone marrow plasma cells; or
- (b) no increase in size or number of lytic bone lesions (development of compression fracture does not exclude response); or
- (c) at least a 50% reduction in the size of soft tissue plasmacytoma (by clinical or applicable radiographic examination, i.e. MRI or CT-Scan); or
- (d) normalisation of corrected serum calcium to less than or equal to 2.65 mmol per L.

The authority application must be made in writing and must include:

- (1) a completed authority prescription form; and
- (2) a completed Multiple Myeloma bortezomib Authority Application - Supporting Information Form which includes details of the basis of the current diagnosis of progressive disease and nomination of which disease activity parameters will be used to assess response; and
- (3) diagnostic reports demonstrating the patient has achieved at least a partial response to the most recent course of PBS-subsidised bortezomib, if not previously provided; and
- (4) a signed patient acknowledgment.

To enable confirmation of eligibility for treatment current diagnostic reports of at least one of the following must be provided:

- (a) the level of serum monoclonal protein; or
- (b) Bence-Jones proteinuria - the results of 24-hour urinary light chain M protein excretion; or
- (c) the serum level of free kappa and lambda light chains; or
- (d) bone marrow aspirate or trephine; or
- (e) if present, the size and location of lytic bone lesions (not including compression fractures); or
- (f) if present, the size and location of all soft tissue plasmacytomas by clinical or radiographic examination i.e. MRI or CT-scan; or
- (g) if present, the level of hypercalcaemia, corrected for albumin concentration.

As these parameters will be used to determine response, results for either (a) or (b) or (c) should be provided for all patients. Where the patient has oligo-secretory or non-secretory multiple myeloma, either (c) or (d) or if relevant (e), (f) or (g) should be provided.

Where the prescriber plans to assess response in patients with oligo-secretory or non-secretory multiple myeloma with free light chain assays, evidence of the oligo-secretory or non-secretory nature of the multiple myeloma (current serum M protein less than 10 g per L) must be provided.

Symptomatic multiple myeloma

Treatment Phase: Continuing PBS-subsidised treatment

Clinical criteria:

Patient must have received an initial authority prescription for bortezomib for newly diagnosed symptomatic multiple myeloma and be ineligible for high dose chemotherapy, AND

Patient must not have demonstrated progressive disease at the time of application, AND

Patient must not have achieved a best confirmed response to bortezomib at the time of application, AND

Patient must not be receiving PBS-subsidised thalidomide or lenalidomide, AND

The treatment must be in combination with a corticosteroid and melphalan or cyclophosphamide, AND

Patient must not receive more than 5 cycles of treatment with bortezomib under this restriction.

Continuing PBS-subsidised supply will not be approved if there is a gap of more than 6 months between the initial application and this application.

Note Authority applications for continuing treatment may be made by telephone to the Department of Human Services on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).

Authority required

Symptomatic multiple myeloma

Treatment Phase: Continuing PBS-subsidised treatment

Clinical criteria:

Patient must have received an initial authority prescription for bortezomib for newly diagnosed symptomatic multiple myeloma and have severe acute renal failure, AND

Patient must have demonstrated at least a partial response at the completion of cycle 4 at the time of application, AND

The treatment must be in combination with a corticosteroid and/or cyclophosphamide, AND

Patient must not be receiving PBS-subsidised thalidomide or lenalidomide, AND

Patient must not receive more than 5 cycles of treatment with bortezomib under this restriction.

The authority application must be made in writing and must include:

- (1) a completed authority prescription form; and
- (2) a completed Multiple Myeloma bortezomib Authority Application Supporting Information form, which includes a copy of the current pathology reports reporting Glomerular Filtration Rate from an Approved Pathology authority; and
- (3) diagnostic reports demonstrating the patient has achieved at least a partial response.

If serum M protein is measurable, partial response (PR) compared with baseline (prior to treatment with bortezomib) is defined as at least a 50% reduction in the level of serum M protein (monoclonal protein).

If urine Bence-Jones protein levels are being used to monitor disease activity, partial response (PR) compared with baseline (prior to treatment with bortezomib) is defined as at least a 90% reduction in 24-hour urinary light chain M protein excretion or to less than 200 mg per 24 hours.

If serum M protein is unmeasurable as in non-secretory/oligo-secretory multiple myeloma, partial response compared with baseline is defined as at least a 50% reduction in the difference between involved and uninvolved serum free light chain (FLC) levels.

If serum M protein and urine Bence-Jones protein and serum FLC are not being used to monitor disease activity, partial response compared with baseline is defined as:

- (a) at least a 50% reduction in bone marrow plasma cells; or
- (b) no increase in size or number of lytic bone lesions (development of compression fracture does not exclude response); or
- (c) at least a 50% reduction in the size of soft tissue plasmacytoma (by clinical or applicable radiographic examination, i.e. MRI or CT-Scan); or
- (d) normalisation of corrected serum calcium to less than or equal to 2.65 mmol per L.

Continuing PBS-subsidised supply will not be approved if there is a gap of more than 6 months between the initial application and this application.

Note Authority applications for continuing treatment may be faxed to the Department of Human Services on 1300 154 190 (hours of operation 8.a.m. to 5 p.m. EST Monday to Friday). The Department will then contact the prescriber by telephone.

▪ **FLUDARABINE**

Note Pharmaceutical benefits that have the form fludarabine phosphate powder for I.V. injection 50 mg (after reconstitution) and pharmaceutical benefits that have the form fludarabine phosphate solution for I.V. injection 50 mg are equivalent for the purposes of substitution.

Authority required (STREAMLINED)

3887

B-cell chronic lymphocytic leukaemia in combination with cyclophosphamide where the patient has advanced disease (Binet Stage B or C) or evidence of progressive Stage A disease.

Stage A progressive disease is defined by at least one of the following: persistent rise in lymphocyte count with doubling time less than 12 months; a downward trend in haemoglobin or platelets, or both; more than 50% increase in the size of liver, spleen, or lymph nodes, or appearance of these signs if not previously present; constitutional symptoms attributable to disease.

The diagnosis of chronic lymphocytic leukaemia (CLL) must have been established based on:

- (a) a lymphocytosis, with more than 5,000 million lymphocytes per L in the peripheral blood; and
- (b) a clonal population of B-cells (CD5/CD19) documented by flow cytometry

Injection

Note Special Pricing Arrangements apply.

Authority required (STREAMLINED)

4814

Advanced International Federation of Gynecology and Obstetrics (FIGO) Stage IIIB, IIIC or Stage IV epithelial ovarian, fallopian tube or primary peritoneal cancer

Treatment Phase: Initial treatment

Clinical criteria:

The condition must be suboptimally debulked (maximum diameter of any gross residual disease greater than 1 cm) only if the patient presents with Stage IIIB or Stage IIIC disease, AND

Patient must have a WHO performance status of 2 or less, AND

The condition must be previously untreated, AND

The treatment must be commenced in combination with platinum-based chemotherapy, AND

The treatment must not exceed a dose of 7.5 mg per kg every 3 weeks, AND

The treatment must not exceed a lifetime total of 18 cycles of bevacizumab for epithelial ovarian, fallopian tube or primary peritoneal cancer.

The patient's WHO performance status and body weight must be documented in the patient's medical records at the time the treatment cycle is initiated.

Injection

4594

Metastatic colorectal cancer

Treatment Phase: Initial treatment

Clinical criteria:

The condition must be previously untreated, AND

Patient must have a WHO performance status of 0 or 1, AND

The treatment must be in combination with first-line chemotherapy, AND

The treatment must not exceed a dose of 5 mg per kg every 2 weeks; OR

The treatment must not exceed a dose of 7.5 mg per kg every 3 weeks.

The patient's WHO performance status and body weight must be documented in the patient's medical records at the time the treatment cycle is initiated.

Authority required (STREAMLINED)

4587

Metastatic colorectal cancer

Treatment Phase: Continuing treatment

Clinical criteria:

Patient must have previously received PBS-subsidised treatment with bevacizumab for this condition, AND

Patient must not have progressive disease, AND

The treatment must be in combination with first-line chemotherapy, AND

The treatment must not exceed a dose of 5 mg per kg every 2 weeks; OR

The treatment must not exceed a dose of 7.5 mg per kg every 3 weeks.

The patient's body weight must be documented in the patient's medical records at the time the treatment cycle is initiated.

Authority required (STREAMLINED)

4939

Metastatic colorectal cancer

Treatment Phase: Initial treatment

Clinical criteria:

Patient must have RAS wild-type metastatic colorectal cancer, AND

Patient must be previously treated with PBS-subsidised first-line anti-EGFR antibodies, AND

Patient must not have previously received PBS-subsidised treatment with this drug for this condition, AND

Patient must have a WHO performance status of 0 or 1, AND

The treatment must be in combination with second-line chemotherapy, AND

The treatment must not exceed a dose of 5 mg per kg every 2 weeks; OR

The treatment must not exceed a dose of 7.5 mg per kg every 3 weeks.

Note This drug is not PBS-subsidised for use in combination with an anti-EGFR antibody.

Authority required (STREAMLINED)

4968

Metastatic colorectal cancer

Treatment Phase: Continuing treatment

Clinical criteria:

Patient must have previously received PBS-subsidised treatment with this drug for this condition, AND

Patient must not have progressive disease, AND

The treatment must be in combination with second-line chemotherapy, AND

The treatment must not exceed a dose of 5 mg per kg every 2 weeks; OR

The treatment must not exceed a dose of 7.5 mg per kg every 3 weeks.

Note This drug is not PBS-subsidised for use in combination with an anti-EGFR antibody.

Note Bevacizumab is not PBS-subsidised when chemotherapy partners are switched whilst maintaining a bevacizumab backbone in the face of progressive disease.

Note The treatment must not exceed a single course of therapy with this drug for metastatic colorectal cancer in a patient's lifetime.

Injection

Authority required

CD30 positive systemic anaplastic large cell lymphoma

Treatment Phase: Initial treatment

Clinical criteria:

The treatment must be for curative intent, AND

Patient must have undergone appropriate prior front-line curative intent chemotherapy, AND

Patient must demonstrate relapsed or chemotherapy-refractory disease.

Applications for authorisation of initial treatment must be in writing and must include:

(a) a completed authority prescription form; and

(b) a completed Systemic anaplastic large cell lymphoma Brentuximab PBS Authority Application - Supporting Information Form which includes the following:

(i) a histology report including evidence of the tumour's CD30 positivity from a biopsy subsequent to the most recently delivered prior treatment with radiation, chemotherapy, biologics, immunotherapy or other agents;

(ii) The date of initial diagnosis of systemic anaplastic large cell lymphoma;

(iii) Dates of commencement and completion of front-line curative intent chemotherapy;

(iv) a declaration of whether the patient's disease is relapsed or refractory, and the date and means by which the patient's disease was assessed as being relapsed or refractory;

(v) a declaration of whether the patient has had, or is planned to have, a transplant

A maximum quantity and number of repeats to provide for an initial course of brentuximab vedotin of 4 cycles will be authorised as part of the initiating restriction.

Note No increase in the maximum number of repeats may be authorised.

Note Special Pricing Arrangements apply.

Authority required (STREAMLINED)

4254

Unresectable Stage III or Stage IV malignant melanoma

Treatment Phase: Induction treatment

Clinical criteria:

The treatment must be as monotherapy, AND

Patient must not have received prior treatment with ipilimumab, AND

The treatment must not exceed a total of 4 doses at a maximum dose of 3 mg per kg every 3 weeks.

The patient's body weight must be documented in the patient's medical records at the time treatment is initiated.

Note For patients who commence therapy with ipilimumab:

(i) Decisions concerning efficacy should await completion of the entire induction regimen (four doses) and should be made in conjunction with established criteria for immunological responses. However induction may be ceased or delayed if symptomatic progressive disease or intolerable adverse events occur and if, in the opinion of the clinician, continuation of treatment poses a risk to the patient;

(ii) Tumour responses may occur beyond the initial 12 week induction phase and evaluation for potential later responses should be undertaken regularly for the first year.

Authority required (STREAMLINED)

4261

Unresectable Stage III or Stage IV malignant melanoma

Treatment Phase: Re-induction treatment

Clinical criteria:

The treatment must be as monotherapy, AND

Patient must have progressive disease after achieving an initial objective response to the most recent course of ipilimumab treatment (induction or re-induction), AND

The treatment must not exceed a total of 4 doses at a maximum dose of 3 mg per kg every 3 weeks.

An initial objective response to treatment is defined as either:

(i) sustained stable disease of greater than or equal to 3 months duration measured from at least 2 weeks after the date of completion of the most recent course of ipilimumab; or

(ii) a partial or complete response.

The patient's body weight must be documented in the patient's medical records at the time treatment with ipilimumab is initiated.

Injection

2641B	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer

■ IPILIMUMAB

Note No increase in the maximum number of repeats may be authorised.

Note A patient may only qualify for PBS-subsidised treatment under this restriction once.

Note Special Pricing Arrangements apply.

Authority required (STREAMLINED)

4251

Unresectable Stage III or Stage IV malignant melanoma

Treatment Phase: Completion of induction treatment

Clinical criteria:

The treatment must be as monotherapy, AND

The treatment must be for completion of induction treatment in a patient who commenced induction treatment with ipilimumab prior to 1 August 2013, AND

The treatment must not exceed a total of 4 doses (combined PBS-subsidised and non-PBS-subsidised) at a maximum dose of 3 mg per kg every 3 weeks.

The patient's body weight must be documented in the patient's medical records at the time treatment is initiated.

For patients who commenced induction treatment with ipilimumab prior to 1 August 2013 prescribers should request the appropriate number of repeats to provide a total of 4 doses of ipilimumab (combined PBS-subsidised and non-PBS subsidised).

Note For patients who commence therapy with ipilimumab:

(i) Decisions concerning efficacy should await completion of the entire induction regimen (four doses) and should be made in conjunction with established criteria for immunological responses. However induction may be ceased or delayed if symptomatic progressive disease or intolerable adverse events occur and if, in the opinion of the clinician, continuation of treatment poses a risk to the patient;

(ii) Tumour responses may occur beyond the initial 12 week induction phase and evaluation for potential later responses should be undertaken regularly for the first year.

Authority required (STREAMLINED)

4252

Unresectable Stage III or Stage IV malignant melanoma

Treatment Phase: Completion of re-induction treatment

Clinical criteria:

The treatment must be as monotherapy, AND

Patient must have progressive disease after achieving an initial objective response to the most recent course of ipilimumab treatment (induction or re-induction) received prior to 1 August 2013, AND

The treatment must be for completion of re-induction treatment in a patient who commenced re-induction treatment with ipilimumab prior to 1 August 2013, AND

The treatment must not exceed a total of 4 doses (combined PBS-subsidised and non-PBS-subsidised) at a maximum dose of 3 mg per kg every 3 weeks.

An initial objective response to treatment is defined as either:

(i) sustained stable disease of greater than or equal to 3 months duration measured from at least 2 weeks after the date of completion of the most recent course of ipilimumab; or

(ii) a partial or complete response.

The patient's body weight must be documented in the patient's medical records at the time treatment with ipilimumab is initiated.

For patients who commenced re-induction treatment with ipilimumab prior to 1 August 2013 prescribers should request the appropriate number of repeats to provide a maximum of 4 doses of ipilimumab (combined PBS-subsidised and non-PBS-subsidised).

Injection

Authority required

Chronic lymphocytic leukaemia (CLL)

Clinical criteria:

Patient must require treatment for CD20 positive chronic lymphocytic leukaemia (CLL), AND

The condition must be previously untreated, AND

Patient must be inappropriate for fludarabine based chemo-immunotherapy, AND

The treatment must be in combination with chlorambucil, AND

Patient must have a creatinine clearance 30 mL/min or greater, AND

Patient must have a total cumulative illness rating scale (CIRS) score of greater than 6 (excluding CLL-induced illness or organ damage); OR

Patient must have a creatinine clearance less than 70 mL/min.

Treatment must be discontinued in patients who experience disease progression while on treatment.

Applications for authorisation must be in writing and must include:

(a) a completed authority prescription form; AND

(b) a completed CD20 positive Chronic Lymphocytic Leukaemia PBS Authority Application - Supporting Information Form which includes:

i) documentation that the patient has CD20 positive CLL (flow cytometry pathology report from blood or bone marrow, noting that this may be from some time earlier); AND

ii) a statement that the patient is previously untreated, is inappropriate for fludarabine based chemo immunotherapy, that treatment will be in combination with chlorambucil; AND

iii) documentation that the patient has a creatinine clearance 30 mL/min or greater; AND

iv) One of the following, either:

- A completed cumulative illness rating scale (CIRS) score form demonstrating that the patient has a score of greater than 6 (excluding CLL-induced illness or organ damage)

OR

-Documentation that the patient has a creatinine clearance less than 70 mL/min;

Injection

	300 mg	*1098.35	38.30	Arzerra [NV] (ofatumumab 100 mg/5 mL injection, 3 x 5 mL vials)

■ PANITUMUMAB

Note Special Pricing Arrangements apply.

Note This drug is not PBS-subsidised for use in combination with another anti-EGFR antibody or in combination with an anti-VEGF antibody.

Authority required (STREAMLINED)

5439

Metastatic colorectal cancer

Treatment Phase: Initial treatment

Clinical criteria:

Patient must have RAS wild-type metastatic colorectal cancer, AND

Patient must have a WHO performance status of 2 or less, AND

The condition must have failed to respond to first-line chemotherapy, AND

The treatment must be as monotherapy; OR

The treatment must be in combination with chemotherapy, AND

The treatment must be the sole PBS-subsidised anti-EGFR antibody therapy for this condition.

Patients who have progressive disease on cetuximab are not eligible to receive PBS-subsidised panitumumab.

Patients who have developed intolerance to cetuximab of a severity necessitating permanent treatment withdrawal are eligible to receive PBS-subsidised panitumumab.

Authority required (STREAMLINED)

5447

Metastatic colorectal cancer

Treatment Phase: Continuing treatment

Clinical criteria:

Patient must have received an initial authority prescription for this drug for treatment of RAS wild-type metastatic colorectal cancer after failure of first-line chemotherapy, AND

Patient must not have progressive disease, AND

The treatment must be as monotherapy; OR

The treatment must be in combination with chemotherapy, AND

The treatment must be the sole PBS-subsidised anti-EGFR antibody therapy for this condition.

Patients who have progressive disease on cetuximab are not eligible to receive PBS-subsidised panitumumab.

Patients who have developed intolerance to cetuximab of a severity necessitating permanent treatment withdrawal are eligible to receive PBS-subsidised panitumumab.

Note This drug is not PBS-subsidised when chemotherapy partners are switched whilst maintaining an anti-EGFR antibody backbone in the face of progressive disease.

Note The treatment must not exceed a single course of therapy with this drug for metastatic colorectal cancer in a patient's lifetime.

Injection

■ PEMBROLIZUMAB

Note No increase in the maximum number of repeats may be authorised.

Note MANAGED ENTRY SCHEME

This medicine has been listed on the PBS via a Managed Entry Scheme (MES). This MES provides a mechanism to address the uncertainty over the size of the additional clinical benefit of this medicine while providing early access to those patients for whom there is a high clinical need.

Information about the benefits of this medicine in clinical practice will be collected, analysed and presented to the Pharmaceutical Benefits Advisory Committee (PBAC) for consideration in the near future.

Prescribers and patients must be aware that if a drug listed via a MES does not prove as beneficial in clinical practice as appeared in the clinical data presented to the PBAC, it may subsequently have its restriction modified, or may be removed from the PBS by the Commonwealth or at the request of the sponsor.

In the case of pembrolizumab, the relevant information is being collected from an ongoing clinical trial outside the PBS.

Details of these arrangements are included in an information sheet that must be provided by the prescribing doctor to each patient receiving PBS subsidy for this medicine.

For more information on Managed Entry Schemes, please visit

<http://www.pbs.gov.au/info/publication/factsheets/shared/framework-for-introduction-of-managed-entry-scheme-for-PBAC-submissions>.

For more information on the PBAC's consideration of this medicine and its MES, please visit

<http://www.pbs.gov.au/info/industry/listing/elements/pbac-meetings/psd/2015-03/pembrolizumab-psd-03-2015>.

Authority required (STREAMLINED)

5362

Unresectable Stage III or Stage IV malignant melanoma

Treatment Phase: Continuing treatment

Clinical criteria:

The treatment must be the sole PBS-subsidised therapy for this condition, AND

Patient must have previously been issued with an authority prescription for this drug for this condition, AND

Patient must have stable or responding disease, AND

The treatment must not exceed a maximum dose of 2 mg per kg every 3 weeks.

Injection

Authority required (STREAMLINED)

5361

Unresectable Stage III or Stage IV malignant melanoma

Treatment Phase: Initial treatment

Clinical criteria:

The treatment must be the sole PBS-subsidised therapy for this condition, AND

The condition must be positive for a BRAF V600 mutation, AND

The condition must have progressed following treatment with a BRAF inhibitor (with or without a MEK inhibitor) unless contraindicated or not tolerated according to the TGA approved Product Information, AND

Patient must not have received prior treatment with ipilimumab, AND

The treatment must not exceed a total of 6 doses at a maximum dose of 2 mg per kg every 3 weeks.

The patient's body weight must be documented in the patient's medical records at the time treatment is initiated.

Note In the first few months after start of immunotherapy, some patients can have a transient tumour flare with subsequent disease response. When progression is suspected, this should be confirmed through a confirmatory scan, taken at least 4 weeks later

Authority required (STREAMLINED)

5334

Unresectable Stage III or Stage IV malignant melanoma

Treatment Phase: Initial treatment

Clinical criteria:

The treatment must be the sole PBS-subsidised therapy for this condition, AND

The condition must be negative for a BRAF V600 mutation, AND

The condition must be previously untreated, AND

The treatment must not exceed a total of 6 doses at a maximum dose of 2 mg per kg every 3 weeks.

The patient's body weight must be documented in the patient's medical records at the time treatment is initiated.

Note In the first few months after start of immunotherapy, some patients can have a transient tumour flare with subsequent disease response. When progression is suspected, this should be confirmed through a confirmatory scan, taken at least 4 weeks later

Authority required (STREAMLINED)

5293

Unresectable Stage III or Stage IV malignant melanoma

Treatment Phase: Grandfathering treatment

Clinical criteria:

The treatment must be the sole PBS-subsidised therapy for this condition, AND

The treatment must be for continuing therapy in a patient who commenced treatment with pembrolizumab prior to 1 September 2015, AND

Patient must have stable or responding disease, AND

The treatment must not exceed a maximum dose of 2 mg per kg every 3 weeks.

Injection

10493G	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	240 mg	5	..	*11232.67	38.30	Keytruda [MK] (pembrolizumab 50 mg injection, 1 vial)

Authority required

Metastatic (Stage IV) HER2 positive breast cancer

Treatment Phase: Initial treatment

Clinical criteria:

Patient must have evidence of human epidermal growth factor receptor 2 (HER2) gene amplification as demonstrated by in situ hybridisation (ISH) either in the primary tumour or a metastatic lesion, AND

Patient must have a WHO performance status of 0 or 1, AND

Patient must not have received prior anti-HER2 therapy for this condition, AND

Patient must not have received prior chemotherapy for this condition, AND

The treatment must be in combination with trastuzumab and a taxane, AND

The treatment must not be in combination with nab-paclitaxel, AND

The treatment must not be used in a patient with a left ventricular ejection fraction (LVEF) of less than 45% and/or with symptomatic heart failure.

Authority applications for initial treatment must be made in writing and must include:

(a) a completed authority prescription form; and

(b) a completed Late stage metastatic breast cancer Initial PBS authority application form which includes:

(i) a copy of the pathology report from an Approved Pathology Authority confirming evidence of HER2 gene amplification in the primary tumour or a metastatic lesion by in situ hybridisation (ISH) and tick a box to state the person has Stage IV disease; and

(ii) a copy of the signed patient acknowledgement form.

Cardiac function must be tested by echocardiography (ECHO) or multigated acquisition (MUGA), prior to seeking the initial authority approval and then at 3 monthly intervals during treatment.

Injection

10267J	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	840 mg	*6227.41	38.30	Perjeta [RO] (pertuzumab 420 mg/14 mL injection, 1 x 14 mL vial)

Authority required

HER2 positive breast cancer

Treatment Phase: Grandfathering treatment

Clinical criteria:

Patient must have previously received non-PBS-subsidised treatment with this drug for this condition before 1 July 2015; OR

Patient must have received non-PBS-subsidised trastuzumab for this condition before 1 July 2015, AND

Patient must not have received non-PBS-subsidised treatment with trastuzumab for this condition before 1 July 2014, AND

Patient must not have received prior therapy with trastuzumab emtansine or lapatinib for this condition, AND

The treatment must be in combination with trastuzumab, AND

The treatment must not be used in a patient with a left ventricular ejection fraction (LVEF) of less than 45% and/or with symptomatic heart failure.

Authority applications for treatment must be made in writing and must include a completed authority prescription form and a copy of the signed patient acknowledgement form.

Cardiac function must be tested by echocardiography (ECHO) or multigated acquisition (MUGA), at 3 monthly intervals during treatment.

Injection

10309N	Max. Amount	No. of Rpts	Premium \$	DPMA \$	MRVSN \$	Brand Name and Manufacturer
	840 mg	1	..	*6227.41	38.30	Perjeta [RO] (pertuzumab 420 mg/14 mL injection, 1 x 14 mL vial)

▪ **PERTUZUMAB**

Note No applications for increased maximum quantities will be authorised.

Note No applications for increased repeats will be authorised.

Note Any queries concerning the arrangements to prescribe may be directed to the Department of Human Services on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).

Authority required

Metastatic (Stage IV) HER2 positive breast cancer

Treatment Phase: Continuing treatment

Clinical criteria:

Patient must have previously been issued with an authority prescription for this drug for this condition, AND

Patient must not receive PBS-subsidised treatment with this drug if progressive disease develops while on this drug, AND

The treatment must be in combination with trastuzumab, AND

The treatment must not be used in a patient with a left ventricular ejection fraction (LVEF) of less than 45% and/or with symptomatic heart failure.

Cardiac function must be tested by echocardiography (ECHO) or multigated acquisition (MUGA), at 3 monthly intervals during treatment.

A patient who has progressive disease when treated with this drug is no longer eligible for PBS-subsidised treatment with this drug.

The treatment must not exceed a lifetime total of one continuous course. However, short treatment breaks are permitted. A patient who has a treatment break of less than 6 weeks in PBS-subsidised treatment with this drug for reasons other than disease progression is eligible to continue to receive PBS-subsidised treatment with this drug. A patient who has a treatment break of more than 6 weeks in PBS-subsidised treatment with this drug is not eligible to receive PBS-subsidised treatment with this drug.

Where a patient has had a treatment break the length of the break is measured from the date the most recent treatment was stopped to the date of the application for further treatment.

HOBART TAS 7001

Authority required

Locally advanced HER2 positive breast cancer

Treatment Phase: Initial treatment (weekly regimen)

Clinical criteria:

Patient must commence treatment concurrently with neoadjuvant chemotherapy, AND

The treatment must not be used in a patient with a left ventricular ejection fraction (LVEF) of less than 45% and/or with symptomatic heart failure, AND

Patient must not receive more than 52 weeks of combined PBS-subsidised and non-PBS-subsidised therapy.

HER2 positivity must be demonstrated by in situ hybridisation (ISH).

Authority applications for initial treatment must be made in writing and must include:

(a) a completed authority prescription form; and

(b) a completed Early Breast Cancer - PBS Supporting Information Form which includes:

(i) a copy of the pathology report from an Approved Pathology Authority confirming the presence of HER2 gene amplification by in situ hybridisation (ISH); and

(ii) a copy of the signed patient acknowledgement form.

Cardiac function must be tested by a suitable method including, for example, ECHO or MUGA, prior to seeking the initial authority approval and then at 3 monthly intervals during treatment.

For a patient on the weekly regimen the medical practitioner should request sufficient quantity based on the weight of the patient to provide for a single loading dose of 4 mg per kg.

Authority required

Early HER2 positive breast cancer

Treatment Phase: Initial treatment (weekly regimen)

 - (i) a copy of the pathology report from an Approved Pathology Authority confirming the presence of HER2 gene amplification by in situ hybridisation (ISH); and
 - (ii) a copy of the signed patient acknowledgement form.

Cardiac function must be tested by a suitable method including, for example, ECHO or MUGA, prior to seeking the initial authority approval and then at 3 monthly intervals during treatment.

For a patient on the 3 weekly regimen the medical practitioner should request sufficient quantity based on the weight of the patient to provide for a single loading dose of 8 mg per kg.

Authority required

Metastatic (Stage IV) HER2 positive adenocarcinoma of the stomach or gastro-oesophageal junction

Treatment Phase: Initial treatment

Clinical criteria:

Patient must have evidence of human epidermal growth factor receptor 2 (HER2) positivity as demonstrated by immunohistochemistry 2+ or more in tumour material, AND

Patient must have evidence of HER2 gene amplification as demonstrated by in situ hybridisation results based on more than 6 copies of HER2 in the same tumour tissue sample, AND

Patient must have evidence of HER2 gene amplification as demonstrated by in situ hybridisation results based on the ratio of HER2 to chromosome 17 being more than 2 in the same tumour tissue sample, AND

Patient must commence treatment in combination with cisplatin and capecitabine; OR

Patient must commence treatment in combination with cisplatin and 5 fluorouracil, AND

Patient must not have previously received this drug for this condition, AND

Patient must not have received prior chemotherapy for this condition, AND

Patient must have a WHO performance status of 2 or less, AND

The treatment must not be used in a patient with a left ventricular ejection fraction (LVEF) of less than 45% and/or with symptomatic heart failure.

Authority applications for initial treatment must be made in writing and must include:

(a) a completed authority prescription form; and

(b) a completed Metastatic (Stage IV) HER2 positive adenocarcinoma of stomach or gastro-oesophageal junction authority application form which includes confirmation that the patient has Stage IV disease and a copy of the pathology report from an Approved Pathology Authority confirming evidence of human epidermal growth factor receptor 2 (HER2) gene amplification as demonstrated in tumour material by both (i) immunohistochemistry (IHC) 2+ or IHC 3+ AND (ii) in situ hybridisation (ISH) results based on both more than 6 copies of HER2 AND the ratio of HER2: chromosome 17 being more than 2 in the same tumour tissue sample

Cardiac function must be tested by echocardiography (ECHO) or multigated acquisition (MUGA), prior to seeking the initial authority approval and then at 3 monthly intervals during treatment

Authority required

Metastatic (Stage IV) HER2 positive breast cancer

Treatment Phase: Initial treatment

Clinical criteria:

Patient must have evidence of human epidermal growth factor receptor 2 (HER2) gene amplification as demonstrated by in situ hybridisation (ISH) either in the primary tumour or a metastatic lesion, AND

The condition must have progressed following treatment with pertuzumab and trastuzumab in combination; OR

The condition must have progressed during or within 6 months of completing adjuvant therapy with trastuzumab, AND

Patient must have a WHO performance status of 0 or 1, AND

The treatment must be as monotherapy, AND

Patient must not have received prior treatment with lapatinib; OR

Patient must have developed intolerance to lapatinib of a severity necessitating permanent treatment withdrawal, AND

The treatment must not be used in a patient with a left ventricular ejection fraction (LVEF) of less than 45% and/or with symptomatic heart failure.

Authority applications for initial treatment must be made in writing and must include:

(a) a completed authority prescription form; and

(b) a completed Late stage metastatic breast cancer Initial PBS authority application form which includes:

(i) a copy of the pathology report from an Approved Pathology Authority confirming evidence of HER2 gene amplification in the primary tumour or a metastatic lesion by in situ hybridisation (ISH) and tick a box to state the person has Stage IV disease;

(ii) a copy of the signed patient acknowledgement form;

(iii) dates of treatment with trastuzumab and pertuzumab; and

(iv) date of demonstration of progression whilst on treatment with trastuzumab and pertuzumab; or
 (v) date of demonstration of progression and date of completion of adjuvant trastuzumab treatment.
 Cardiac function must be tested by echocardiography (ECHO) or multigated acquisition (MUGA), prior to seeking the initial authority approval and then at 3 monthly intervals during treatment.

Patients who have progressive disease on lapatinib are not eligible to receive PBS-subsidised trastuzumab emtansine.
 Patients who have developed intolerance to lapatinib of a severity necessitating permanent treatment withdrawal are eligible to receive PBS-subsidised trastuzumab emtansine.

If intolerance to treatment develops during the relevant period of use, which is of a severity necessitating permanent treatment withdrawal, please provide details of the degree of this toxicity at the time of application.

Note Any queries concerning the arrangements to prescribe may be directed to the Department of Human Services on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).

Authority required

Multiple myeloma

Treatment Phase: Treatment of Progressive disease - Continuing PBS-subsidised treatment

Clinical criteria:

The treatment must be as monotherapy; OR

The treatment must be in combination with a corticosteroid and/or cyclophosphamide, AND

Patient must have previously received 8 treatment cycles of bortezomib for progressive disease, AND

Patient must have demonstrated at the completion of cycle 8 at least a partial response to bortezomib, AND

Patient must not have received 2 treatment cycles after first achieving a confirmed complete response, AND

Patient must not have a gap of more than 10 months between the initial application and an application following completion of 8 treatment cycles, AND

Patient must not receive more than 3 cycles of bortezomib under this restriction.

The authority application must be made in writing and must include:

(1) a completed authority prescription form; and

(2) a completed Multiple Myeloma bortezomib Authority Application Supporting Information form; and

(3) diagnostic reports demonstrating the patient has achieved at least a partial response.

If serum M protein is measurable, partial response (PR) compared with baseline (prior to treatment with bortezomib) is defined as at least a 50% reduction in the level of serum M protein (monoclonal protein).

If urine Bence-Jones protein levels are being used to monitor disease activity, partial response (PR) compared with baseline (prior to treatment with bortezomib) is defined as at least a 90% reduction in 24-hour urinary light chain M protein excretion or to less than 200 mg per 24 hours.

If serum M protein is unmeasurable as in non-secretory/oligo-secretory multiple myeloma, partial response compared with baseline is defined as at least a 50% reduction in the difference between involved and uninvolved serum free light chain (FLC) levels.

If serum M protein and urine Bence-Jones protein and serum FLC are unmeasurable/unavailable, partial response compared with baseline is defined as:

(a) at least a 50% reduction in bone marrow plasma cells; or

(b) no increase in size or number of lytic bone lesions (development of compression fracture does not exclude response); or

(c) at least a 50% reduction in the size of soft tissue plasmacytoma (by clinical or applicable radiographic examination, i.e. MRI or CT-Scan); or

(d) normalisation of corrected serum calcium to less than or equal to 2.65 mmol per L.

Diagnostic reports must be no more than one month old at the time of application.

Where a response assessment is not submitted prior to cycle 9, patients will be deemed to have failed to respond to treatment with bortezomib.

Confirmation of complete response requires 2 determinations a minimum of 6 weeks apart.

- (b) no increase in size or number of lytic bone lesions (development of compression fracture does not exclude response); or
- (c) at least a 50% reduction in the size of soft tissue plasmacytoma (by clinical or applicable radiographic examination, i.e. MRI or CT-Scan); or
- (d) normalisation of corrected serum calcium to less than or equal to 2.65 mmol per L.

Diagnostic reports must be no more than one month old at the time of application.

Where a response assessment is not submitted prior to cycle 9, patients will be deemed to have failed to respond to treatment with bortezomib.

Confirmation of complete response requires 2 determinations a minimum of 6 weeks apart.

Authority required

Symptomatic multiple myeloma

Clinical criteria:

Patient must be newly diagnosed, AND

Patient must be eligible for high dose chemotherapy and autologous stem cell transplantation, AND

Patient must not be receiving PBS-subsidised thalidomide or lenalidomide, AND

The treatment must be in combination with chemotherapy, AND

Patient must not receive more than 4 cycles of treatment with bortezomib under this restriction.

The authority application must be made in writing and must include:

- (1) a completed authority prescription form; and
- (2) a completed Multiple Myeloma bortezomib Authority Application Supporting Information Form, which includes details of the histological diagnosis of multiple myeloma; and
- (3) a signed patient acknowledgement.

Authority required

Symptomatic multiple myeloma

Treatment Phase: Initial PBS-subsidised treatment

Clinical criteria:

Patient must be newly diagnosed, AND

Patient must be ineligible for high dose chemotherapy, AND

Patient must not be receiving PBS-subsidised thalidomide or lenalidomide, AND

The treatment must be in combination with a corticosteroid and melphalan or cyclophosphamide, AND

Patient must not receive more than 4 cycles of treatment with bortezomib under this restriction.

The authority application must be made in writing and must include:

(1) a completed authority prescription form; and

(2) a completed Multiple Myeloma bortezomib Authority Application Supporting Information Form, which includes details of the histological diagnosis of multiple myeloma and ineligibility for high dose chemotherapy; and

(3) a signed patient acknowledgement.

Authority required

Symptomatic multiple myeloma

Treatment Phase: Initial PBS-subsidised treatment

Clinical criteria:

Patient must be newly diagnosed, AND

Patient must have severe acute renal failure, AND

Patient must require dialysis; OR

Patient must be at high risk of requiring dialysis in the opinion of a nephrologist, AND

The treatment must be in combination with a corticosteroid and/or cyclophosphamide, AND

Patient must not be receiving PBS-subsidised thalidomide or lenalidomide, AND

Patient must not receive more than 4 cycles of treatment with bortezomib under this restriction.

The authority application must be made in writing and must include:

(1) a completed authority prescription form; and

(2) a completed Multiple Myeloma bortezomib Authority Application Supporting Information Form, which includes details of the histological diagnosis of multiple myeloma, the name of the nephrologist who has reviewed the patient and the date of review, a copy of the current pathology reports reporting Glomerular Filtration Rate from an Approved Pathology Authority, and nomination of the disease activity parameter(s) that will be used to assess response; and

(3) a signed patient acknowledgement.

Disease activity parameters include current diagnostic reports of at least one of the following:

(a) the level of serum monoclonal protein; or

(b) Bence-Jones proteinuria - the results of 24-hour urinary light chain M protein excretion; or

(c) in oligo-secretory and non-secretory myeloma patients only, the serum level of free kappa and lambda light chains; or

(d) bone marrow aspirate or trephine; or

(e) if present, the size and location of lytic bone lesions (not including compression fractures); or

(f) if present, the size and location of all soft tissue plasmacytomas by clinical or radiographic examination i.e. Magnetic Resonance Imaging (MRI) or computed tomography (CT) scan; or

(g) if present, the level of hypercalcaemia, corrected for albumin concentration.

As these parameters will be used to determine response, results for either (a) or (b) or (c) should be provided for all patients.

Where the patient has oligo-secretory or non-secretory multiple myeloma, either (c) or (d) or if relevant (e), (f) or (g) should be provided.

Where the prescriber plans to assess response in patients with oligo-secretory or non-secretory multiple myeloma with free light chain assays, evidence of the oligo-secretory or non-secretory nature of the multiple myeloma (current serum M protein less than 10 g per L) must be provided.

Note Patients who have initiated treatment with thalidomide within the last month do not have to experience failure after a trial of at least 4 weeks of thalidomide or to have failed to achieve at least a minimal response after at least 8 weeks of thalidomide treatment.

Authority required

Multiple myeloma

Treatment Phase: Treatment of Progressive disease - Initial PBS-subsidised treatment

Clinical criteria:

The condition must be confirmed by a histological diagnosis, AND

The treatment must be as monotherapy; OR

The treatment must be in combination with a corticosteroid and/or cyclophosphamide, AND

Patient must have progressive disease after at least one prior therapy, AND

Patient must have undergone or be ineligible for a primary stem cell transplant, AND

Patient must have experienced treatment failure after a trial of at least four (4) weeks of thalidomide at a dose of at least 100 mg daily or have failed to achieve at least a minimal response after eight (8) or more weeks of thalidomide-based therapy for progressive disease, AND

Patient must not be receiving concomitant PBS-subsidised lenalidomide, AND

Patient must not receive more than 4 cycles of treatment with bortezomib under this restriction.

Progressive disease is defined as at least 1 of the following:

- (a) at least a 25% increase and an absolute increase of at least 5 g per L in serum M protein (monoclonal protein); or
- (b) at least a 25% increase in 24-hour urinary light chain M protein excretion, and an absolute increase of at least 200 mg per 24 hours; or
- (c) in oligo-secretory and non-secretory myeloma patients only, at least a 50% increase of the difference between involved free light chain and uninvolved free light chain; or
- (d) at least a 25% relative increase and at least a 10% absolute increase in plasma cells in a bone marrow aspirate or on biopsy; or
- (e) an increase in the size or number of lytic bone lesions (not including compression fractures); or
- (f) at least a 25% increase in the size of an existing or the development of a new soft tissue plasmacytoma (determined by clinical examination or diagnostic imaging); or
- (g) development of hypercalcaemia (corrected serum calcium greater than 2.65 mmol per L not attributable to any other cause).

Oligo-secretory and non-secretory patients are defined as having active disease with less than 10 g per L serum M protein.

Thalidomide treatment failure is defined as:

- (1) confirmed disease progression during thalidomide treatment or within 6 months of discontinuing thalidomide treatment; or
- (2) severe intolerance or toxicity unresponsive to clinically appropriate dose adjustment.

Severe intolerance due to thalidomide is defined as unacceptable somnolence or sedation interfering with activities of daily living.

Toxicity from thalidomide is defined as peripheral neuropathy (Grade 2 or greater, interfering with function), drug-related seizures, serious Grade 3 or 4 drug-related dermatological reactions, such as Stevens-Johnson Syndrome, or other Grade 3 or 4 toxicity.

Failure to achieve at least a minimal response after 8 or more weeks of thalidomide-based therapy for progressive disease is defined as:

- (1) less than a 25% reduction in serum or urine M protein; or
- (2) in oligo-secretory and non-secretory myeloma patients only, less than a 25% reduction in the difference between involved and uninvolved serum free light chain levels.

If the dosing requirement for thalidomide cannot be met, the application must state the reasons why this criterion cannot be satisfied.

The authority application must be made in writing and must include:

- (1) a completed authority prescription form; and
- (2) a completed Multiple Myeloma bortezomib Authority Application - Supporting Information Form, which includes details of the histological diagnosis of multiple myeloma, prior treatments including name(s) of drug(s) and date of most recent treatment cycle and record of prior stem cell transplant or ineligibility for prior stem cell transplant; details of thalidomide treatment failure; details of the basis of the diagnosis of progressive disease or failure to respond; and nomination of which disease activity parameters will be used to assess response; and
- (3) duration of thalidomide and daily dose prescribed; and
- (4) a signed patient acknowledgment.

To enable confirmation of eligibility for treatment, current diagnostic reports of at least one of the following must be provided:

- (a) the level of serum monoclonal protein; or
- (b) Bence-Jones proteinuria - the results of 24-hour urinary light chain M protein excretion; or
- (c) the serum level of free kappa and lambda light chains; or
- (d) bone marrow aspirate or trephine; or
- (e) if present, the size and location of lytic bone lesions (not including compression fractures); or
- (f) if present, the size and location of all soft tissue plasmacytomas by clinical or radiographic examination i.e. MRI or CT-scan; or
- (g) if present, the level of hypercalcaemia, corrected for albumin concentration.

As these parameters will be used to determine response, results for either (a) or (b) or (c) should be provided for all patients. Where the patient has oligo-secretory or non-secretory multiple myeloma, either (c) or (d) or if relevant (e), (f) or (g) should be provided. Where the prescriber plans to assess response in patients with oligo-secretory or non-secretory multiple myeloma with free light chain assays, evidence of the oligo-secretory or non-secretory nature of the multiple myeloma (current serum M protein less than 10 g per L) must be provided.

Authority required

Multiple myeloma

Treatment Phase: Treatment of Progressive disease - Continuing PBS-subsidised treatment

Clinical criteria:

The treatment must be as monotherapy; OR

The treatment must be in combination with a corticosteroid and/or cyclophosphamide, AND
 Patient must have previously received 4 treatment cycles of bortezomib for progressive disease, AND
 Patient must have demonstrated at the completion of cycle 4 at least a partial response to bortezomib, AND
 Patient must not have received 2 treatment cycles after first achieving a confirmed complete response, AND
 Patient must not have a gap of more than 6 months between the initial application and subsequent applications, AND
 Patient must not receive more than 4 cycles of treatment with bortezomib under this restriction.

The authority application must be made in writing and must include:

- (1) a completed authority prescription form; and
- (2) a completed Multiple Myeloma bortezomib Authority Application Supporting Information form; and
- (3) diagnostic reports demonstrating the patient has achieved at least a partial response.

If serum M protein is measurable, partial response (PR) compared with baseline (prior to treatment with bortezomib) is defined as at least a 50% reduction in the level of serum M protein (monoclonal protein).

If urine Bence-Jones protein levels are being used to monitor disease activity, partial response (PR) compared with baseline (prior to treatment with bortezomib) is defined as at least a 90% reduction in 24-hour urinary light chain M protein excretion or to less than 200 mg per 24 hours.

If serum M protein is unmeasurable as in non-secretory/oligo-secretory multiple myeloma, partial response compared with baseline is defined as at least a 50% reduction in the difference between involved and uninvolved serum free light chain (FLC) levels.

If serum M protein and urine Bence-Jones protein and serum FLC are unmeasurable/unavailable, partial response compared with baseline is defined as:

- (a) at least a 50% reduction in bone marrow plasma cells; or
- (b) no increase in size or number of lytic bone lesions (development of compression fracture does not exclude response); or
- (c) at least a 50% reduction in the size of soft tissue plasmacytoma (by clinical or applicable radiographic examination, i.e. MRI or CT-Scan); or
- (d) normalisation of corrected serum calcium to less than or equal to 2.65 mmol per L.

Diagnostic reports must be no more than one month old at the time of application.

Where a response assessment is not submitted prior to cycle 5, patients will be deemed to have failed to respond to treatment with bortezomib.

Confirmation of complete response requires 2 determinations a minimum of 6 weeks apart.

Note Patients who fail to demonstrate at least a partial response after 8 cycles will not be eligible to receive further PBS-subsidised treatment with bortezomib.

Multiple myeloma

Treatment Phase: Retreatment of Progressive disease - Initial PBS-subsidised treatment

Clinical criteria:

The treatment must be as monotherapy; OR

The treatment must be in combination with a corticosteroid and/or cyclophosphamide, AND

Patient must have progressive disease, AND

Patient must have previously been treated with PBS-subsidised bortezomib, AND

Patient must have experienced at least a partial response to the most recent course of PBS-subsidised bortezomib therapy, AND

Patient must not be receiving concomitant PBS-subsidised lenalidomide, AND

Patient must not receive more than 4 cycles of treatment with bortezomib under this restriction.

Progressive disease is defined as at least 1 of the following:

- (a) at least a 25% increase and an absolute increase of at least 5 g per L in serum M protein (monoclonal protein); or
- (b) at least a 25% increase in 24-hour urinary light chain M protein excretion, and an absolute increase of at least 200 mg per 24 hours; or
- (c) in oligo-secretory and non-secretory myeloma patients only, at least a 50% increase of the difference between involved free light chain and uninvolved free light chain; or
- (d) at least a 25% relative increase and at least a 10% absolute increase in plasma cells in a bone marrow aspirate or on biopsy; or

- (e) an increase in the size or number of lytic bone lesions (not including compression fractures); or
- (f) at least a 25% increase in the size of an existing or the development of a new soft tissue plasmacytoma (determined by clinical examination or diagnostic imaging); or
- (g) development of hypercalcaemia (corrected serum calcium greater than 2.65 mmol per L not attributable to any other cause).

Oligo-secretory and non-secretory patients are defined as having active disease with less than 10 g per L serum M protein. If serum M protein is measurable, partial response (PR) compared with baseline (prior to treatment with bortezomib) is defined as at least a 50% reduction in the level of serum M protein (monoclonal protein).

If urine Bence-Jones protein levels are being used to monitor disease activity, partial response (PR) compared with baseline (prior to treatment with bortezomib) is defined as at least a 90% reduction in 24-hour urinary light chain M protein excretion or to less than 200 mg per 24 hours.

If serum M protein is unmeasurable as in non-secretory/oligo-secretory multiple myeloma, partial response compared with baseline is defined as at least a 50% reduction in the difference between involved and uninvolved serum free light chain (FLC) levels.

If serum M protein and urine Bence-Jones protein and serum FLC are unmeasurable/unavailable, partial response compared with baseline is defined as:

- (a) at least a 50% reduction in bone marrow plasma cells; or
- (b) no increase in size or number of lytic bone lesions (development of compression fracture does not exclude response); or
- (c) at least a 50% reduction in the size of soft tissue plasmacytoma (by clinical or applicable radiographic examination, i.e. MRI or CT-Scan); or
- (d) normalisation of corrected serum calcium to less than or equal to 2.65 mmol per L.

The authority application must be made in writing and must include:

- (1) a completed authority prescription form; and
- (2) a completed Multiple Myeloma bortezomib Authority Application - Supporting Information Form which includes details of the basis of the current diagnosis of progressive disease and nomination of which disease activity parameters will be used to assess response; and
- (3) diagnostic reports demonstrating the patient has achieved at least a partial response to the most recent course of PBS-subsidised bortezomib, if not previously provided; and
- (4) a signed patient acknowledgment.

To enable confirmation of eligibility for treatment current diagnostic reports of at least one of the following must be provided:

- (a) the level of serum monoclonal protein; or
- (b) Bence-Jones proteinuria - the results of 24-hour urinary light chain M protein excretion; or
- (c) the serum level of free kappa and lambda light chains; or
- (d) bone marrow aspirate or trephine; or
- (e) if present, the size and location of lytic bone lesions (not including compression fractures); or
- (f) if present, the size and location of all soft tissue plasmacytomas by clinical or radiographic examination i.e. MRI or CT-scan; or
- (g) if present, the level of hypercalcaemia, corrected for albumin concentration.

As these parameters will be used to determine response, results for either (a) or (b) or (c) should be provided for all patients. Where the patient has oligo-secretory or non-secretory multiple myeloma, either (c) or (d) or if relevant (e), (f) or (g) should be provided.

Where the prescriber plans to assess response in patients with oligo-secretory or non-secretory multiple myeloma with free light chain assays, evidence of the oligo-secretory or non-secretory nature of the multiple myeloma (current serum M protein less than 10 g per L) must be provided.

Symptomatic multiple myeloma

Treatment Phase: Continuing PBS-subsidised treatment

Clinical criteria:

Patient must have received an initial authority prescription for bortezomib for newly diagnosed symptomatic multiple myeloma and be ineligible for high dose chemotherapy, AND

Patient must not have demonstrated progressive disease at the time of application, AND

Patient must not have achieved a best confirmed response to bortezomib at the time of application, AND

Patient must not be receiving PBS-subsidised thalidomide or lenalidomide, AND

The treatment must be in combination with a corticosteroid and melphalan or cyclophosphamide, AND

Patient must not receive more than 5 cycles of treatment with bortezomib under this restriction.

Continuing PBS-subsidised supply will not be approved if there is a gap of more than 6 months between the initial application and this application.

Note Authority applications for continuing treatment may be made by telephone to the Department of Human Services on 1800 700 270 (hours of operation 8 a.m. to 5 p.m. EST Monday to Friday).

Authority required

Symptomatic multiple myeloma

Treatment Phase: Continuing PBS-subsidised treatment

Clinical criteria:

Patient must have received an initial authority prescription for bortezomib for newly diagnosed symptomatic multiple myeloma and have severe acute renal failure, AND

Patient must have demonstrated at least a partial response at the completion of cycle 4 at the time of application, AND

The treatment must be in combination with a corticosteroid and/or cyclophosphamide, AND

Patient must not be receiving PBS-subsidised thalidomide or lenalidomide, AND

Patient must not receive more than 5 cycles of treatment with bortezomib under this restriction.

The authority application must be made in writing and must include:

(1) a completed authority prescription form; and

(2) a completed Multiple Myeloma bortezomib Authority Application Supporting Information form, which includes a copy of the current pathology reports reporting Glomerular Filtration Rate from an Approved Pathology authority; and

(3) diagnostic reports demonstrating the patient has achieved at least a partial response.

If serum M protein is measurable, partial response (PR) compared with baseline (prior to treatment with bortezomib) is defined as at least a 50% reduction in the level of serum M protein (monoclonal protein).

If urine Bence-Jones protein levels are being used to monitor disease activity, partial response (PR) compared with baseline (prior to treatment with bortezomib) is defined as at least a 90% reduction in 24-hour urinary light chain M protein excretion or to less than 200 mg per 24 hours.

If serum M protein is unmeasurable as in non-secretory/oligo-secretory multiple myeloma, partial response compared with baseline is defined as at least a 50% reduction in the difference between involved and uninvolved serum free light chain (FLC) levels.

If serum M protein and urine Bence-Jones protein and serum FLC are not being used to monitor disease activity, partial response compared with baseline is defined as:

- (a) at least a 50% reduction in bone marrow plasma cells; or
- (b) no increase in size or number of lytic bone lesions (development of compression fracture does not exclude response); or
- (c) at least a 50% reduction in the size of soft tissue plasmacytoma (by clinical or applicable radiographic examination, i.e. MRI or CT-Scan); or
- (d) normalisation of corrected serum calcium to less than or equal to 2.65 mmol per L.

Continuing PBS-subsidised supply will not be approved if there is a gap of more than 6 months between the initial application and this application.

Note Authority applications for continuing treatment may be faxed to the Department of Human Services on 1300 154 190 (hours of operation 8.a.m. to 5 p.m. EST Monday to Friday). The Department will then contact the prescriber by telephone.

Other antiemetics

▪ APREPITANT

Note Aprepitant is not PBS-subsidised for nausea and vomiting associated with radiotherapy being used to treat malignancy.

Note No increase in the maximum quantity or number of units may be authorised.

Note No increase in the maximum number of repeats may be authorised.

Authority required (STREAMLINED)

4223

Nausea and vomiting

Clinical criteria:

The condition must be associated with cytotoxic chemotherapy being used to treat malignancy, AND

The treatment must be in combination with a 5-hydroxytryptamine receptor (5HT₃) antagonist and dexamethasone, AND

Patient must be scheduled to be administered a chemotherapy regimen that includes any 1 of the following agents: altretamine; carmustine; cisplatin when a single dose constitutes a cycle of chemotherapy; cyclophosphamide at a dose of 1500 mg per square metre per day or greater; dacarbazine; procarbazine when a single dose constitutes a cycle of chemotherapy; streptozocin.

No more than 1 capsule of aprepitant 165 mg will be authorised per cycle of cytotoxic chemotherapy.

Authority required (STREAMLINED)

4216

Nausea and vomiting

Clinical criteria:

The condition must be associated with cytotoxic chemotherapy being used to treat breast cancer, AND

The treatment must be in combination with a 5-hydroxytryptamine receptor (5HT3) antagonist and dexamethasone, AND

Patient must be scheduled to be co-administered cyclophosphamide and an anthracycline.

No more than 1 capsule of aprepitant 165 mg will be authorised per cycle of cytotoxic chemotherapy.

Authority required (STREAMLINED)

4217

Nausea and vomiting

Clinical criteria:

The condition must be associated with moderately emetogenic cytotoxic chemotherapy being used to treat malignancy, AND

The treatment must be in combination with a 5-hydroxytryptamine receptor (5HT3) antagonist and dexamethasone on day 1 of a chemotherapy cycle, AND

Patient must have had a prior episode of chemotherapy induced nausea or vomiting, AND

Patient must be scheduled to be administered a chemotherapy regimen that includes any 1 of the following intravenous chemotherapy agents: arsenic trioxide; azacitidine; carboplatin; cyclophosphamide at a dose of less than 1500 mg per square metre per day; cytarabine at a dose of greater than 1 g per square metre per day; dactinomycin; daunorubicin; doxorubicin; epirubicin; fotemustine; idarubicin; ifosfamide; irinotecan; melphalan; methotrexate at a dose of 250 mg to 1 g per square metre; oxaliplatin; raltitrexed.

No more than 1 capsule of aprepitant 165 mg will be authorised per cycle of cytotoxic chemotherapy.

Concomitant use of a 5HT3 antagonist should not occur with aprepitant on days 2 and 3 of any chemotherapy cycle.

aprepitant 165 mg capsule, 1
